

# Tip #2

Create modular  
and reusable  
automation  
components.

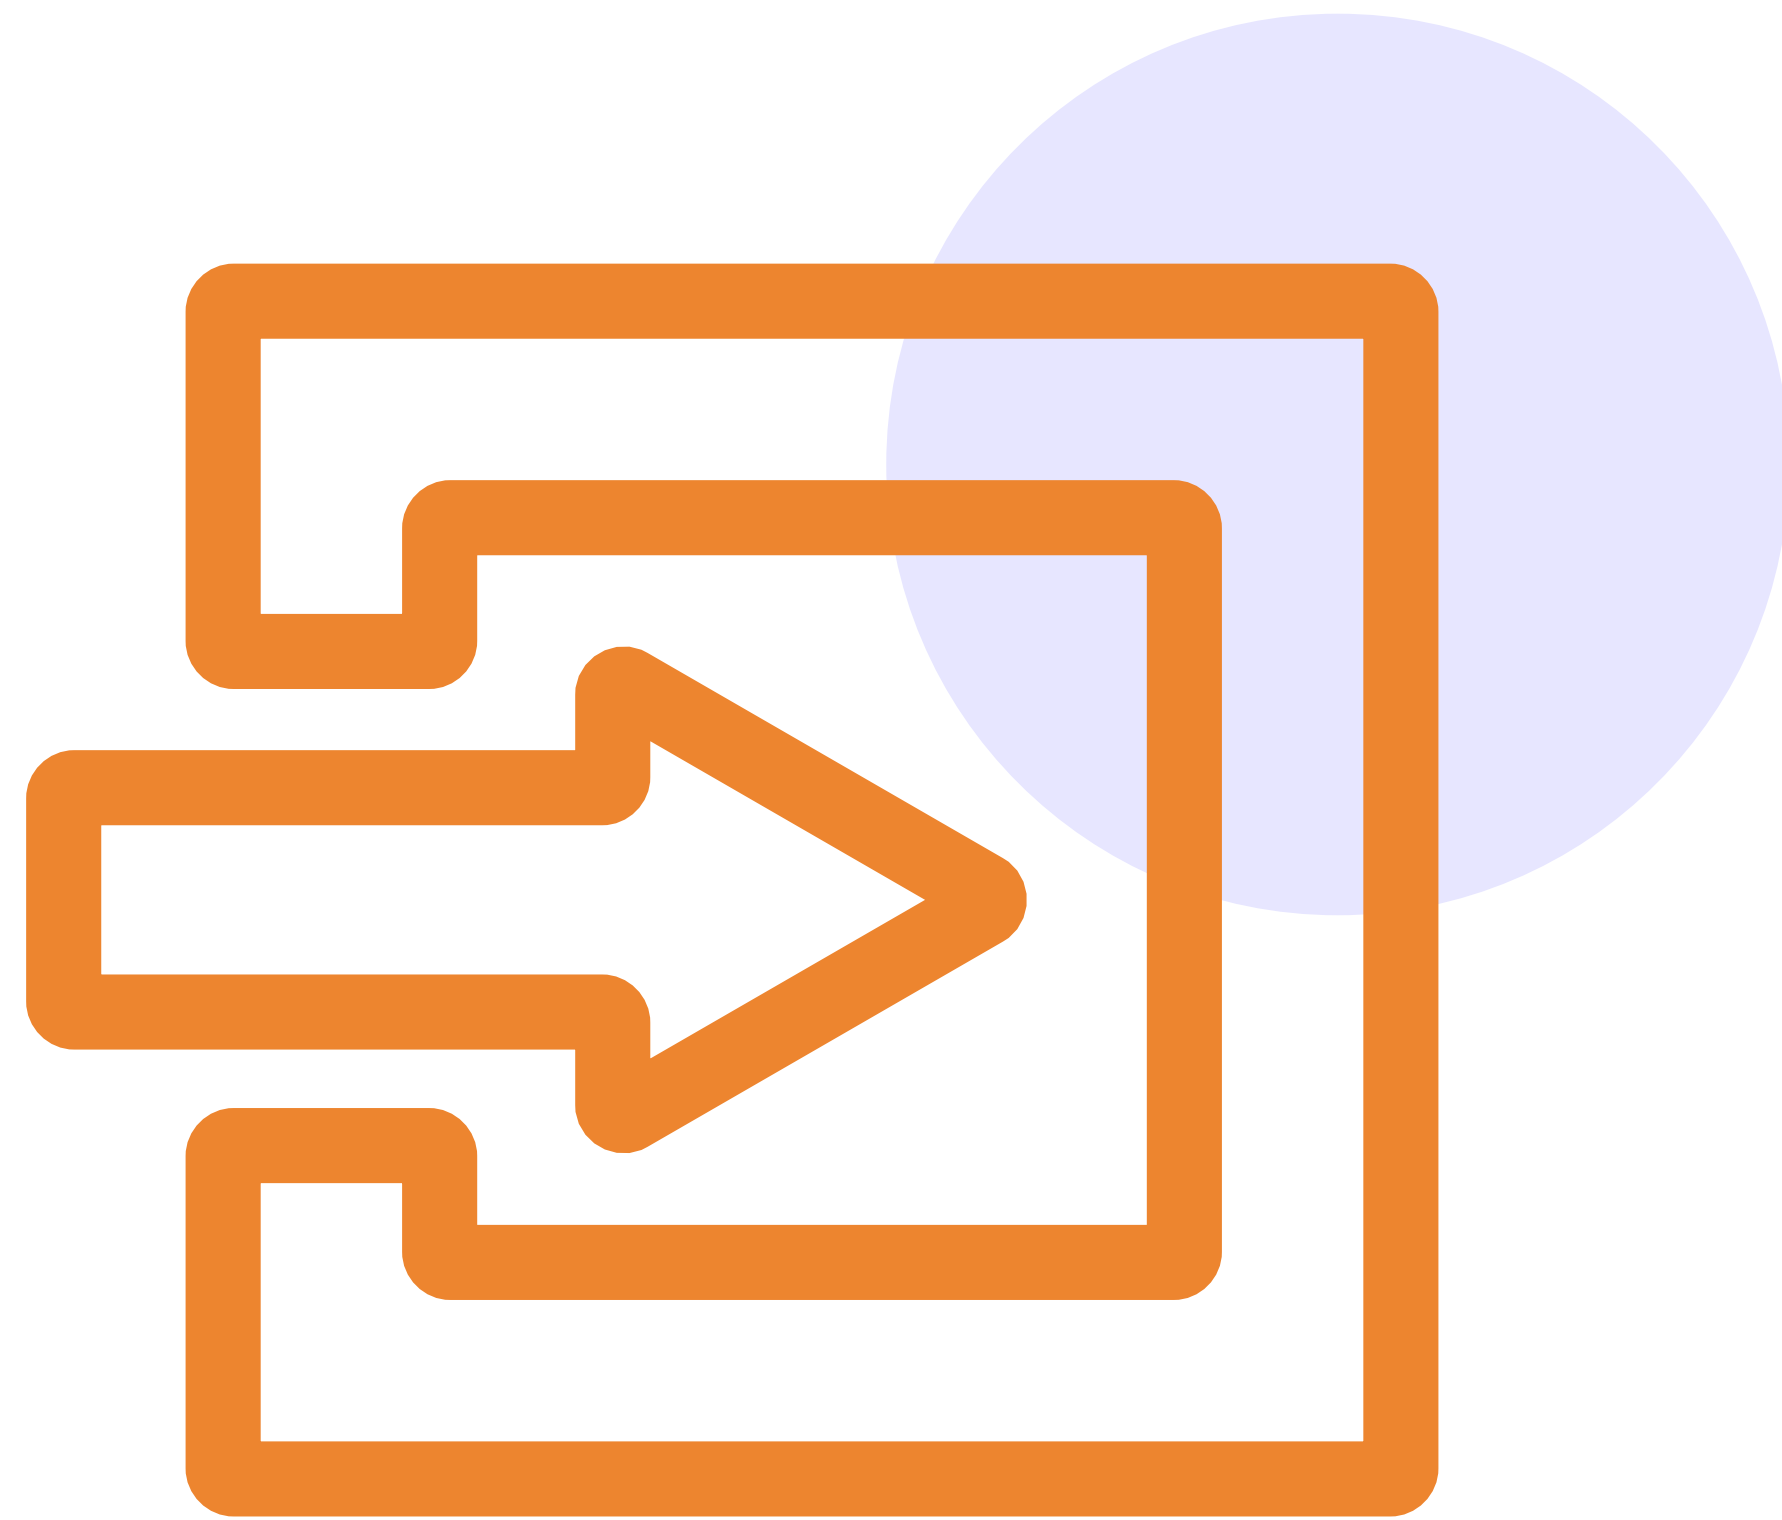

*Swipe next >*

# How to use this tip?

---

**Divide** your automation tasks into **separate automation components** (script files, functions, etc.)

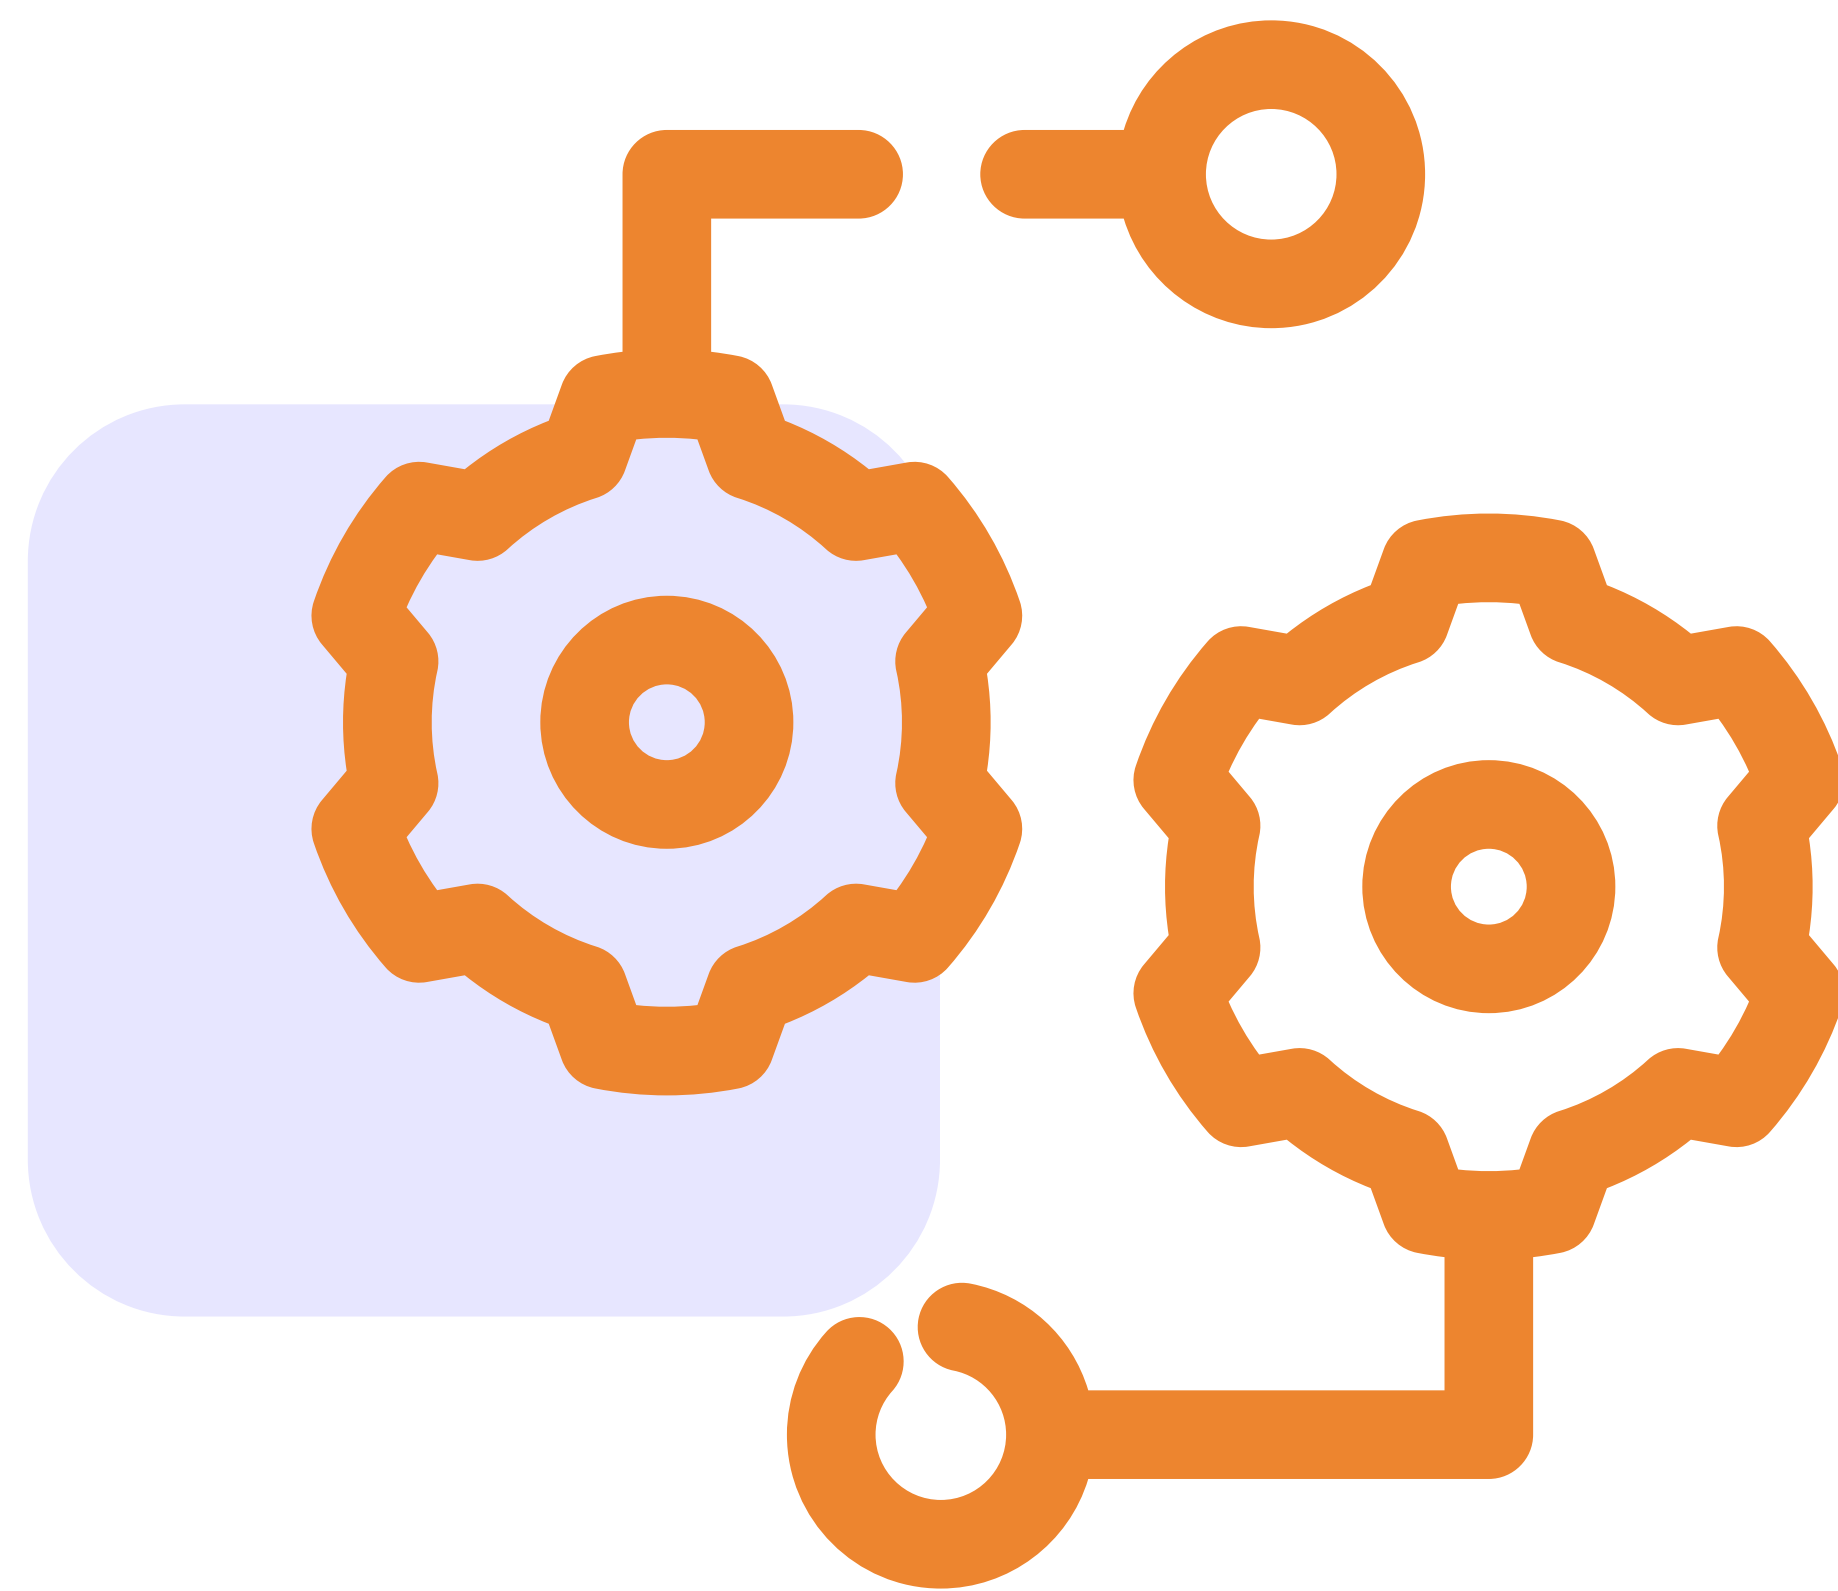

**Assess and identify**  
reusable components.

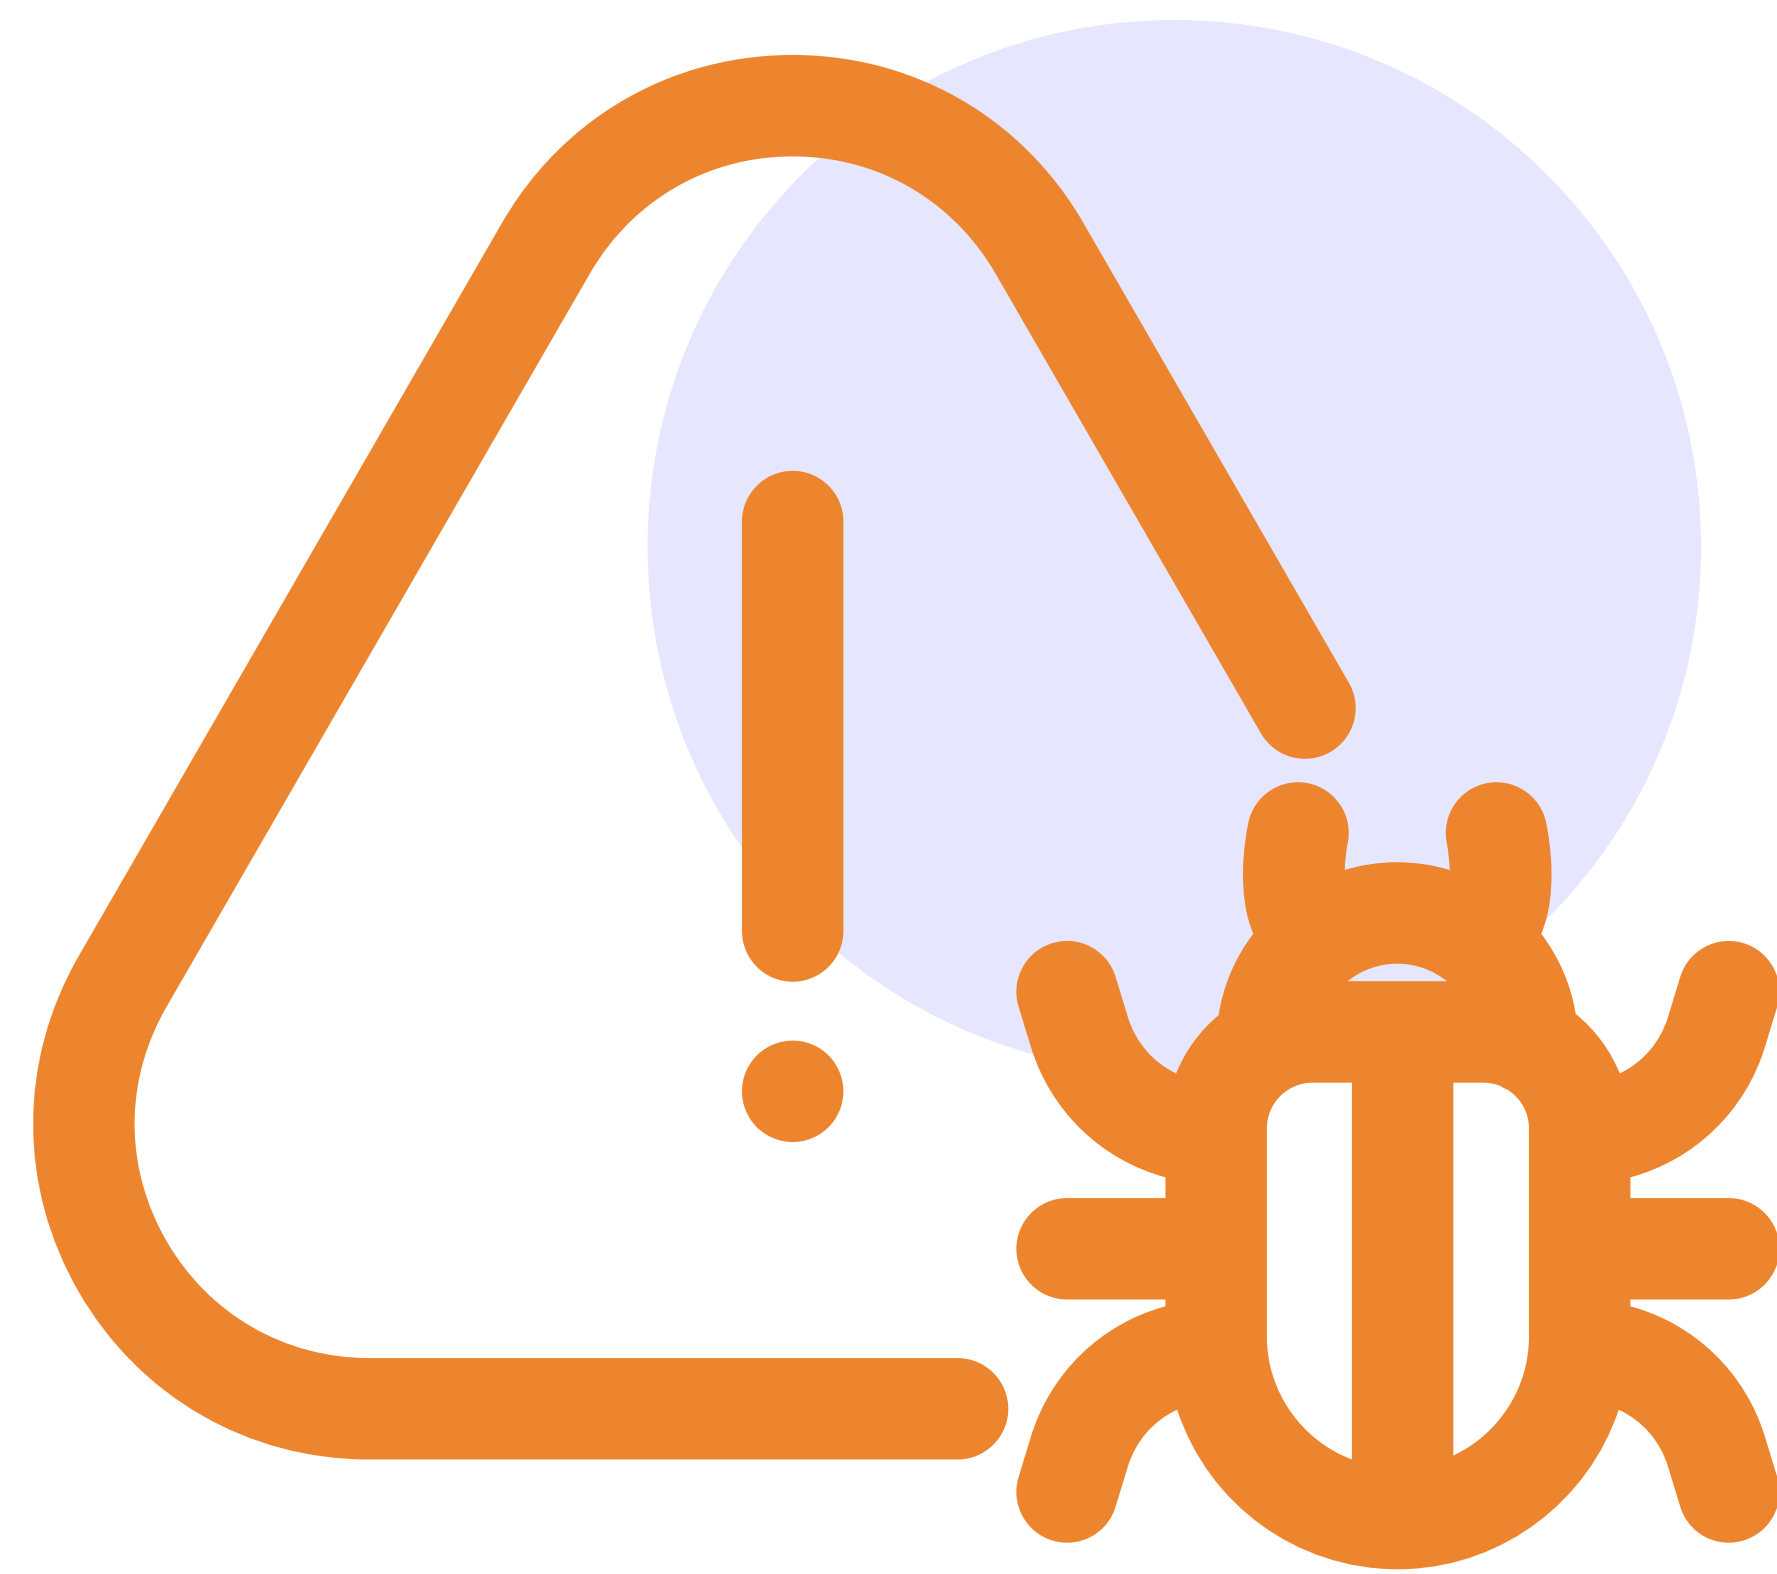

**Ensure** your team reuses the existing reusable components.

# How does this help you?

---

Modular scripts facilitate  
parallel execution.

It is **easier and quicker** to run small and independent scripts/components **when debugging errors.**

Reusing components helps to **improve quality, reduces script maintenance, and simplifies new script development.**

Modular and reusable components  
enhance the overall readability.
