

Tip #11

Easily Automate
File Downloads in
Sahi Pro

Swipe next >

How to use this Tip?

Sahi Pro automatically detects file downloads triggered from your web application. These downloads are saved to **<Sahi Pro>/userdata/temp/download** directory.

◀ ▶ Path Id: 0 - Shopping Cart

Keywords Entities Screens Data Path

1. Shopping Cart [0] ^

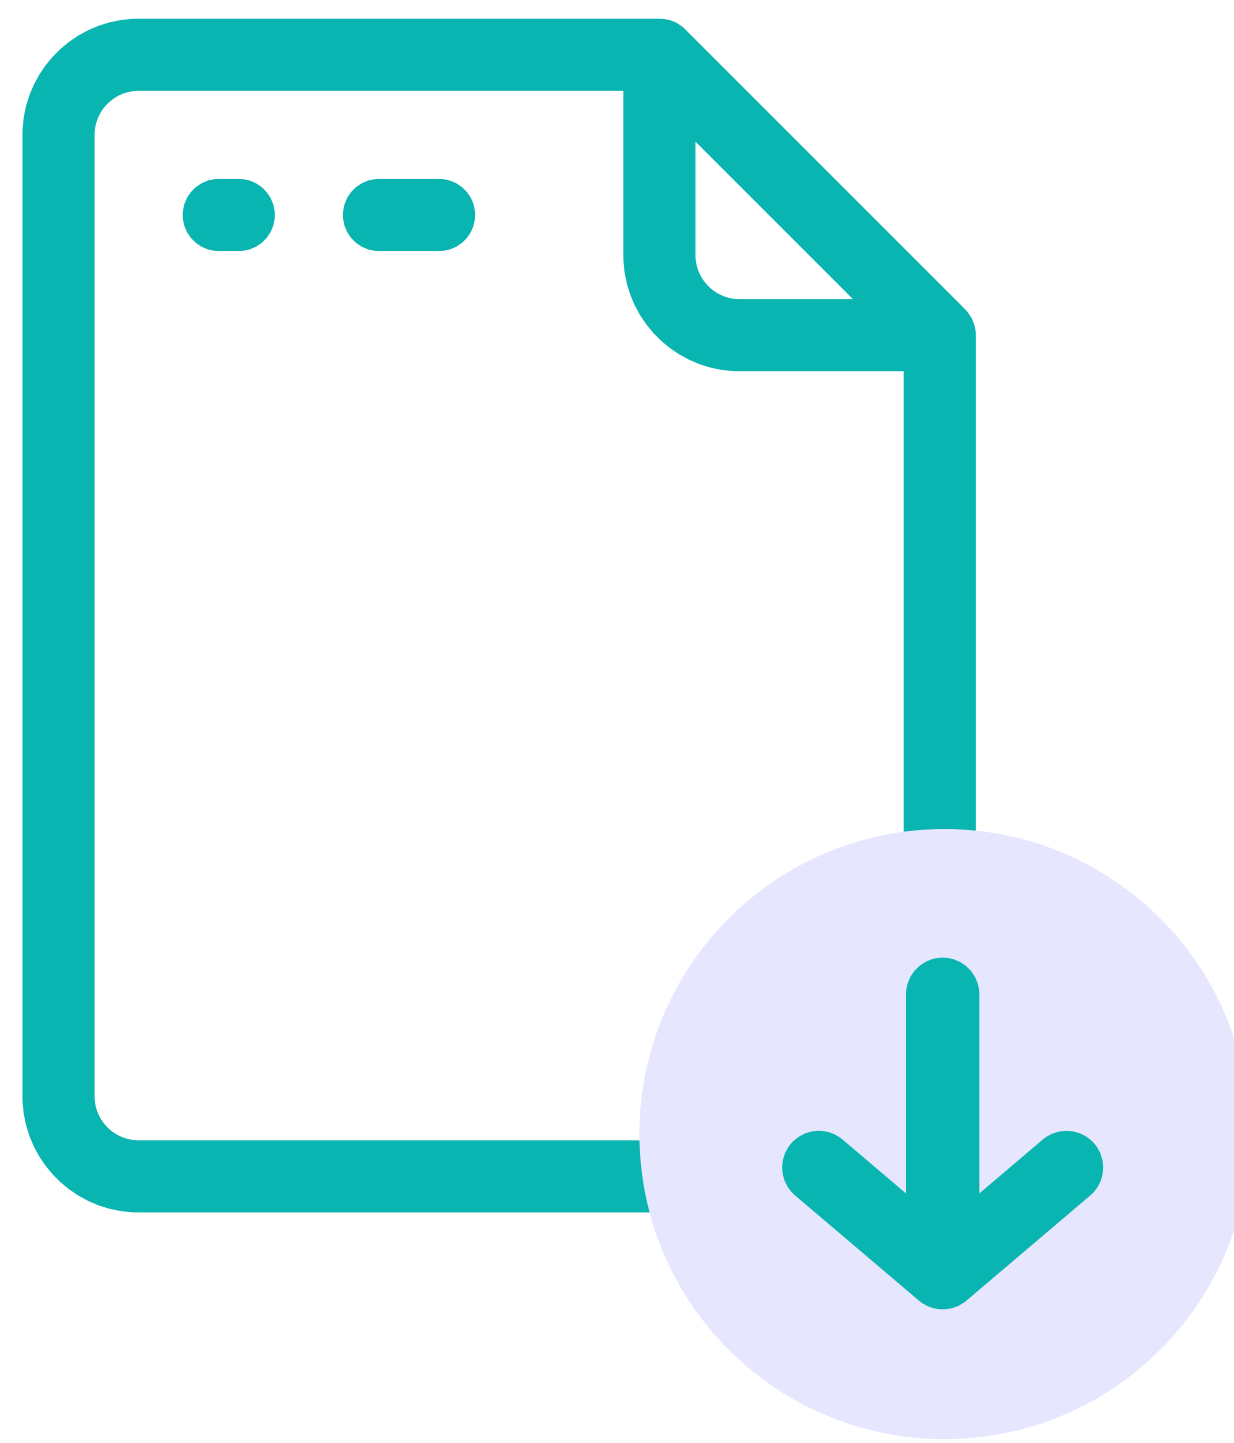

- Go to Product page
- Add \$item to cart
- Checkout
- Place Order
- Download Invoice**
- Verify details in the invoice

Keyword: Download Invoice ✎

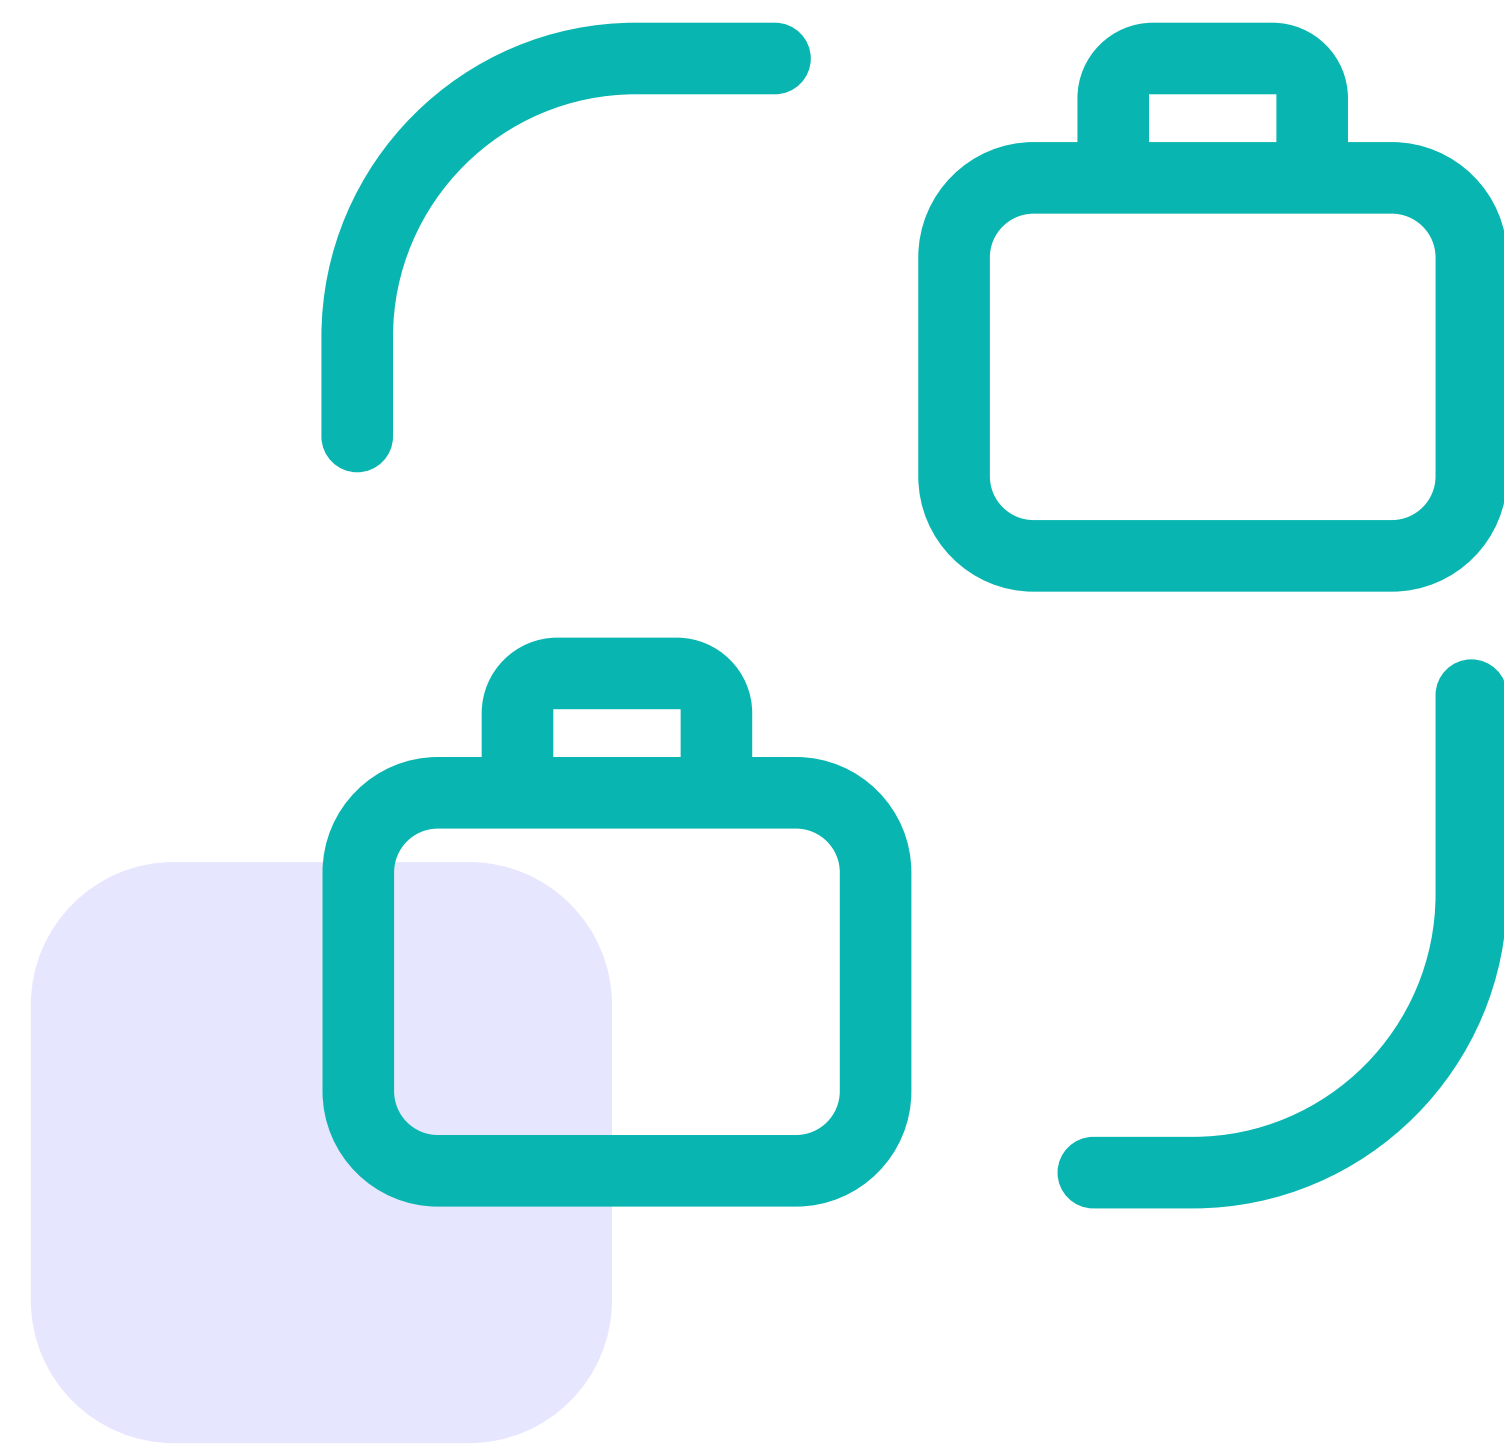

<input type="checkbox"/>		Action	Parameters
<input type="checkbox"/>	1	Click	_button("Download Invoice")
<input checked="" type="checkbox"/>	2	Save Downloaded As	C:/Orders/Invoice.pdf

You can use Action '**Save Downloaded As**' to save the file to a desired location.

How does this help you?

While downloading a file, '**Save As**' dialogs may be shown by the browser to download and save the file. Since **Sahi Pro automatically handles file downloads**, your automation need not handle these '**Save As**' dialogs.

Sahi Pro also appends a '**sessionId**' to the filename downloaded. Thus, during Parallel Playback, **multiple simultaneous tests do not overwrite each other's files.**
