

Sustainability Statement

Issue Date: February 2022

Review Date: February 2023

Statement of Intent

During the course of our daily operations, all employees at UK Facilities Solutions (UKFSL) have the potential to influence and impact on a variety of areas including the environmental, economic and social wellbeing of our areas of operation.

Understanding and controlling the risks and opportunities associated with our works, which also includes our supply chain, is critical to operating a sustainable business. To this end we aim to work towards accreditations in Certified Management Systems in Health & Safety (OHSAS 18001, ISO 45001:2018) Environment (ISO 14001:2015) and Energy (ISO 50001:2018), we aim to ensure that our operations across our business continually improves:

Our policy is to integrate sustainability into our core business activities, ensuring that all UKFSL colleagues understand how to plan, organise and deliver and review works in a sustainable way.

Our main areas of concern, health & safety, environment management, energy management, waste management and responsible sourcing of materials are covered in dedicated policies, however our headline sustainability ambitions are detailed below:

We are committed to:

- Delivering on all our commitments made to our clients at tender stage

- The equality, development and wellbeing of our people

- Being supportive and respectful to the communities where we work

- Understanding and reducing the impact of our transport and construction activities on local stakeholders

- Managing our energy use and minimising carbon emissions

- Managing waste responsibly

- Good customer relations management

- Engaging in open-minded discussions with stakeholders

- Procuring services and materials through sustainable sources

- Measuring sustainability performance, setting new targets and continuously improving

We actively encourage all of our employees and supply chain partners to understand and meet their individual responsibilities and recognise that our short- and long-term economic development can and should be achieved only through a responsible approach to social, environmental and ethical issues.

The sustainability policy is available to all employees and upon written request to our clients and sub-contractors, it is our ambition to also have this available digitally on our website along with all of our policies.

The company undertakes to embrace the principles of sustainability as it goes about its day to day operations.

James Jenkins
Managing Director
