

Q1 2023: ETHEREUM ECOSYSTEM AND BEYOND

Web3 Development Report

TL;DR

The state of web3 development

Active builders reach ATH; prices recover

Executive summary

- **zkSpring:** Major zero-knowledge launches attracted new developers and end-users
- **Testnets:** Goerli ETH scarcity drove devs to embrace new abuse-resistant Sepolia faucets
- **DeFi:** Silicon Valley Bank failure and ensuing contagion contributed to DeFi growth
- **Discovery:** 150K+ users explored the best web3 tools on Alchemy Dapp Store
- **Education:** 46K+ aspiring web3 developers sprinted toward Alchemy University courses

Web3 dev activity continued to climb

Y/Y and Q/Q comparisons highlight sustained growth

1.9M

Ethereum SDK installs/week

+47% Y/Y +8% Q/Q

1.4M

Goerli testnet smart contracts created

+577% Y/Y -46% Q/Q

438K

Wallet SDK installs/week

+451% Y/Y +33% Q/Q

18.9M

EVM smart contracts created across Ethereum mainnet, Arbitrum, Optimism and Polygon

+139% Y/Y -53% Q/Q

638K

Bridged assets from L1 Ethereum mainnet to Arbitrum, Optimism, Starknet and zkSync

+518% Y/Y +44% Q/Q

70K+

Daily visits to sepoliafaucet.com which offers free Sepolia ETH: the new standard for developers testing on Ethereum

Shipping velocity accelerated

Supported by a price rebound

DAPP VERTICALS

and -37% Y/Y

SOLANA

+110%

Solana price USD Q/Q
and -83% Y/Y

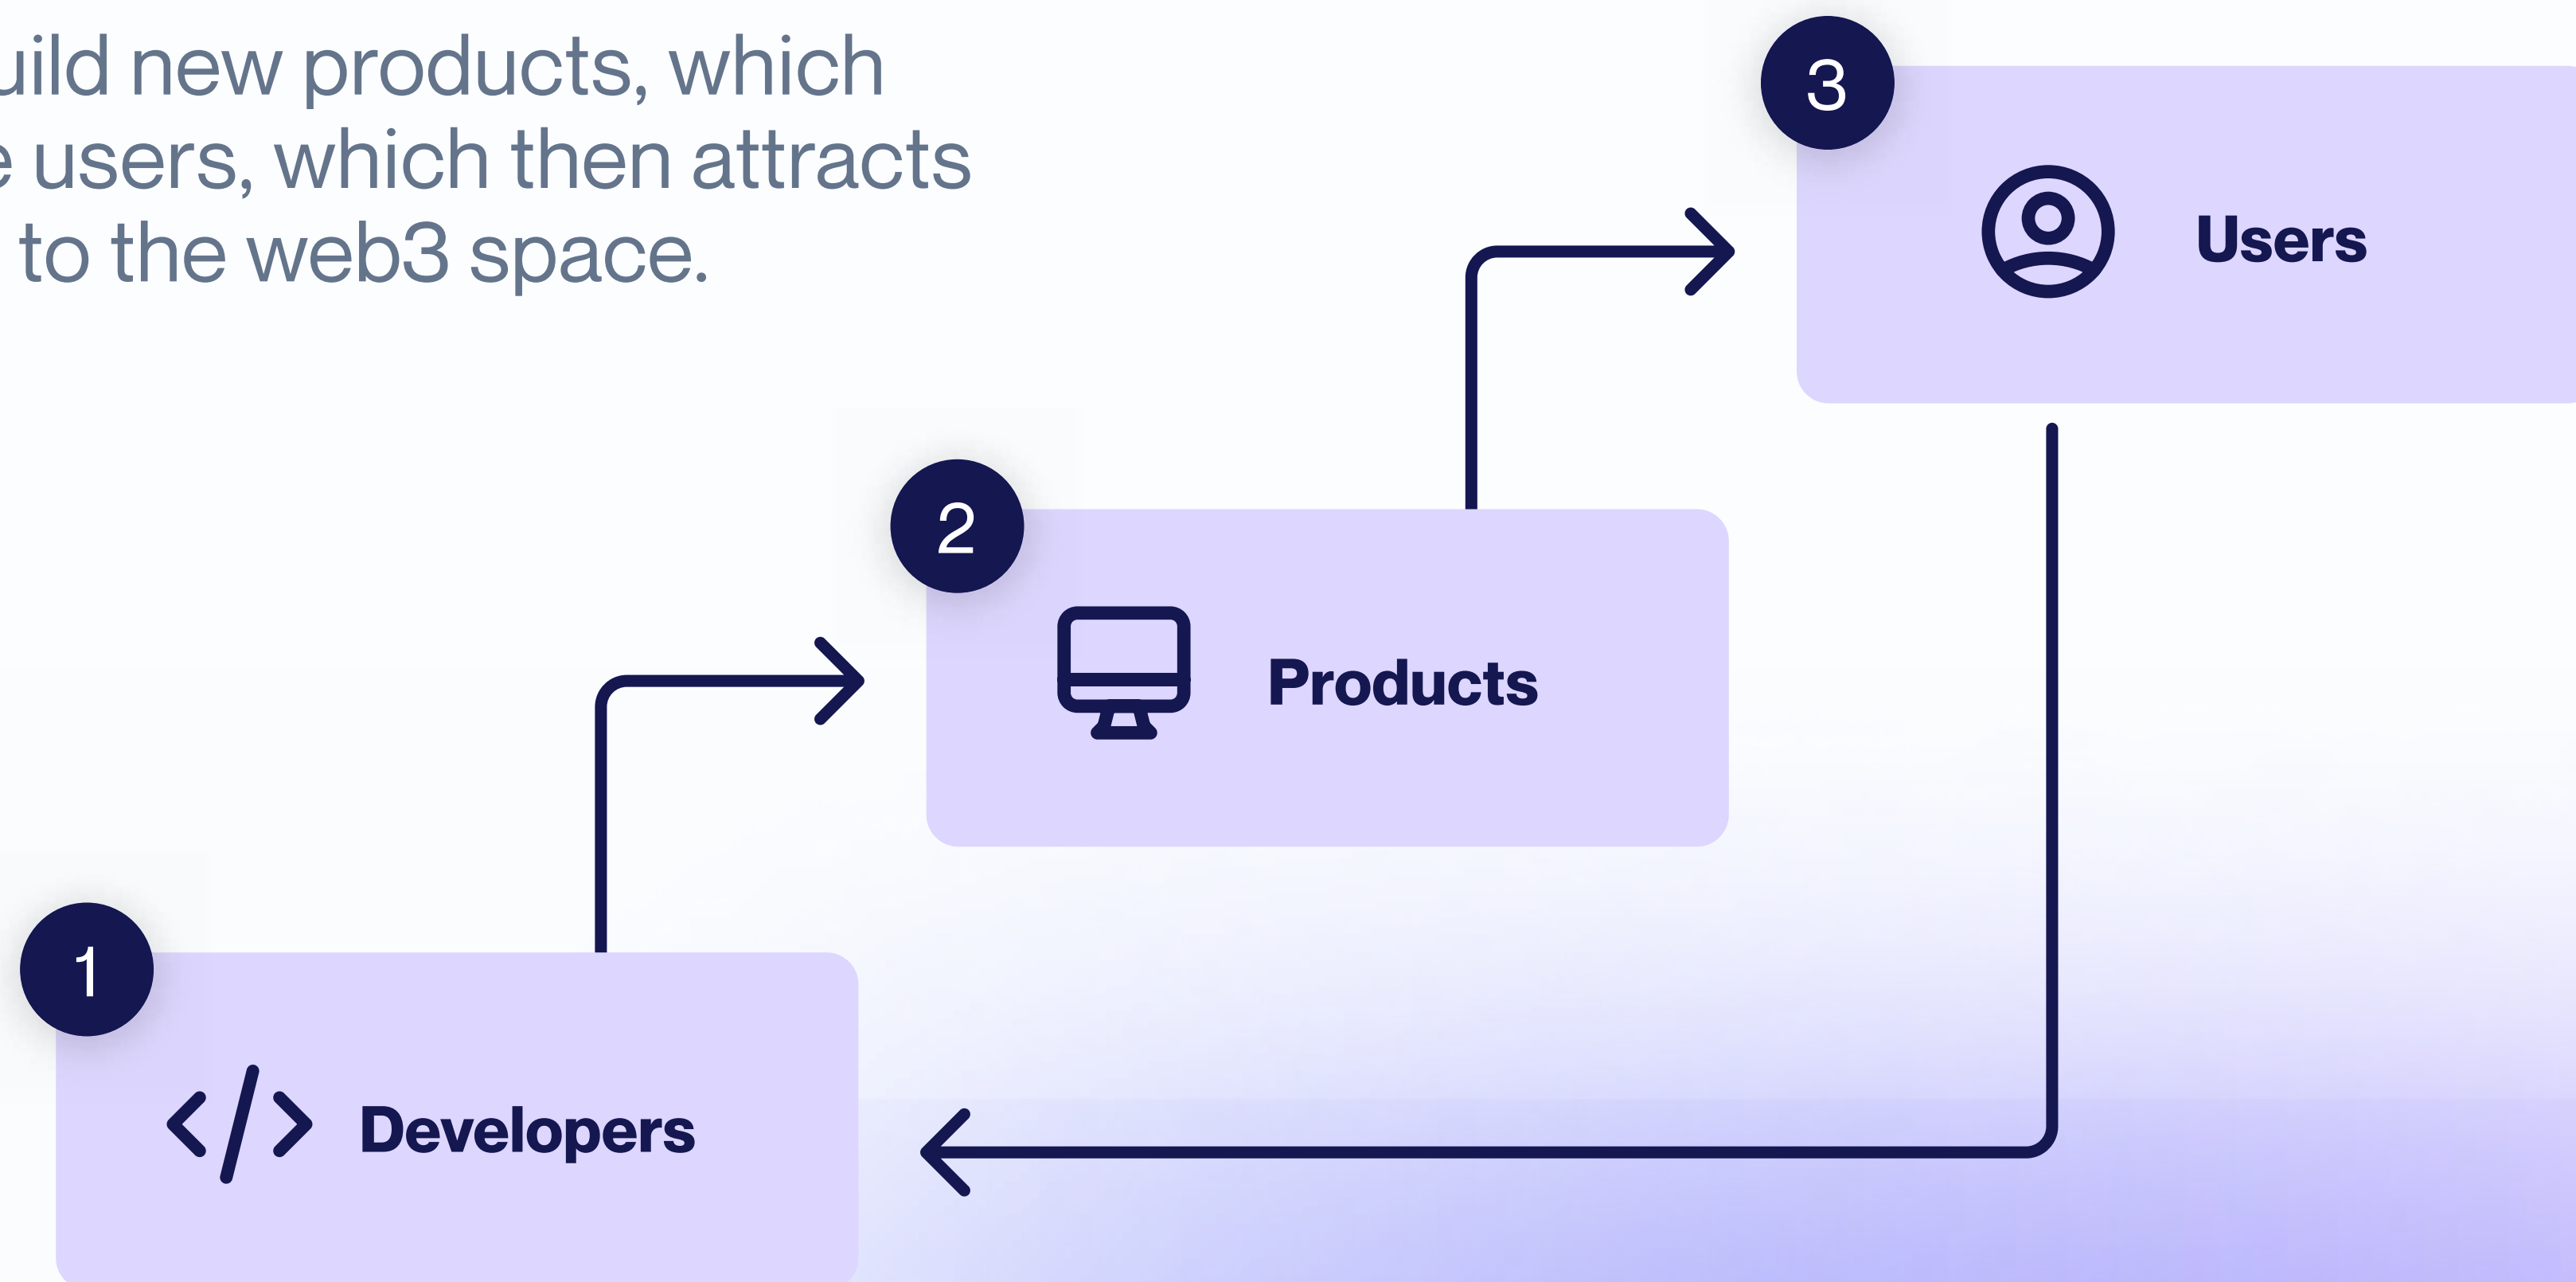

Our approach

Understanding the builder ecosystem

The development cycle

Developers build new products, which onboard more users, which then attracts more builders to the web3 space.

5 stages of developer activity

DEVELOPMENT STAGE	1. IDEATION & INTEREST	2. LOCAL TESTING	3. TESTNET DEPLOY	4. MAINNET DEPLOY	5. SCALING DAPP USAGE
Action	Developer becomes interested in web3 and forms idea of what to build	Developer installs libraries for web3 application building and local deployment	Developer connects to testnet blockchain through node offering, gets testnet ETH and deploys on testnet	Developer connects to mainnet blockchain, places Ethereum in wallet and deploys to Mainnet	Developer maintains, improves and scales existing codebase for growth
Measurement	Alchemy University, Alchemy Dapp Store, Alchemy Ventures, Web3 30 awards, Create Web3 Dapp downloads	Library downloads	Goerlifaucet.com, Testnet contracts	Goerli faucet, Sepolia faucet, Testnet contracts	Dapp usage, DappRadar

Measuring **builder momentum**

These 3 indicators show us how devs are **building**, **deploying**, and **scaling**

Libraries

Developer tools to easily read/write to the blockchain

Smart contracts

Computer programs stored on a blockchain

Dapps

End-user ready applications with decentralized backends

1 Ideation and interest

2 Local development

3 Testnet deploy

4 Mainnet dev activity

5 Scaling usage

6 Trends and insights

Developer sentiment and increasing desires to learn about blockchain development signal growing interest in building web3 products.

Web3 startups kept raising

Alchemy Ventures saw continued momentum among innovative web3 builders and their projects:

- Investments steady Q/Q
- Launched Alchemy Accelerator program
- Startups included:

Cata Labs

Ostium

Shadow

Founders from our Q1 investments are focused on:

26%

DeFi

25%

Developer tools

16%

Account abstraction

13%

Infrastructure

10%

Roll-ups as a service

10%

Zero-knowledge tech

Students signaled bullish sentiment

Alchemy University - web3's free, open and advanced developer education platform and community - is booming:

46K+

students enrolled to date

25K+

registrations in Q1

20K+

currently completing curriculum

Web3 **30**

And the ecosystem was celebrated

The inaugural Web3 30 recognized top projects in the industry's first-ever community choice awards!

7K+
Total votes

500+
Nominated projects

Create Web3 Dapp **ramped up strongly**

Create-Web3-Dapp is a beginner-friendly developer tool from Alchemy that allows anyone to create a fully-functioning dapp in less than four minutes from their terminal. Its usage signals an appetite from developers to ship new projects.

4.8K

Q1 downloads

655

GitHub stars

161

GitHub forks

1 Ideation and interest

2 Local development

3 Testnet deploy

4 Mainnet dev activity

5 Scaling usage

6 Trends and insights

Before launching projects on testnets or mainnet blockchains, devs build on their personal computers (i.e. locally) to test and iterate before shipping.

Weekly Ethereum SDK installs **kept climbing**

Ethereum SDKs include Ethers.js, Web3.js, Hardhat and Web3.py which devs use to build smart contracts on Ethereum.

Weekly wallet SDK installs **hit an ATH**

Wallet SDKs analyzed include Coinbase Wallet, Rainbow, Web3 Onboard, and Web3 Modal - which developers use to connect consumers to the Ethereum blockchain, demonstrating that more dapps added wallet support.

SPOTLIGHT

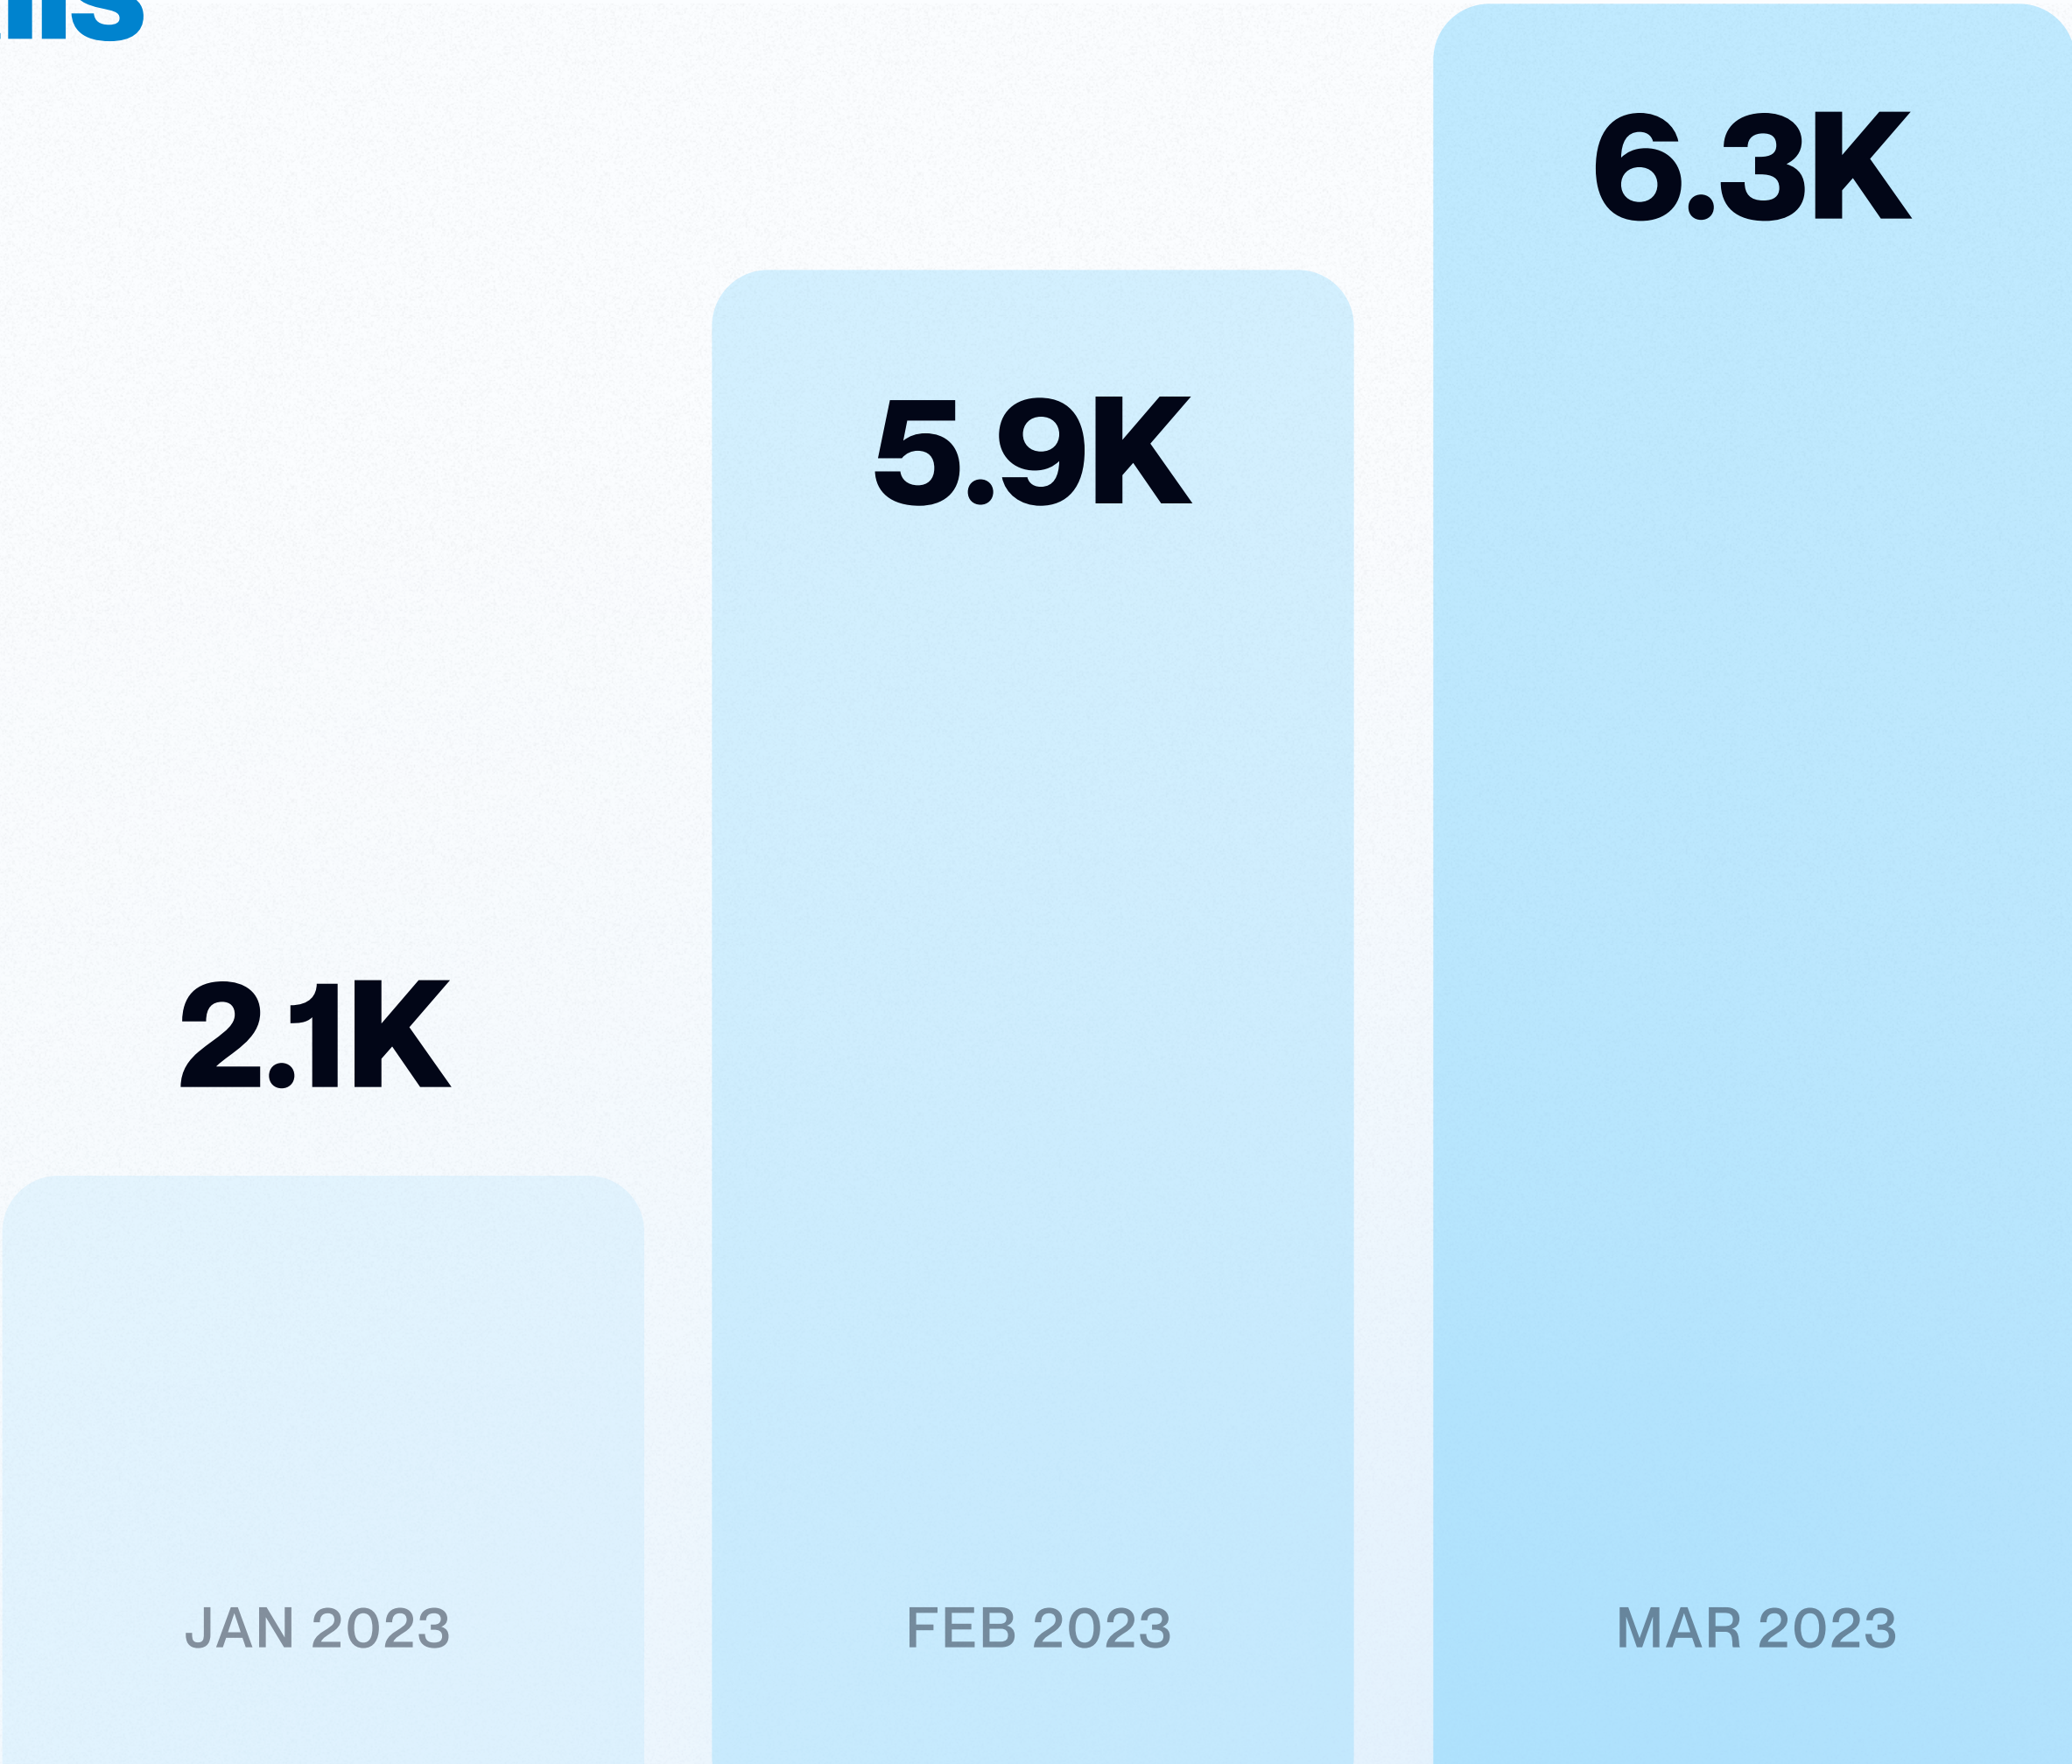

MetaMask wallet **SDK Installs**

SDK installs from the industry’s most popular wallet, MetaMask, reinforced the bullish trend:

- Launched JavaScript, iOS, React Native and Unity SDKs
- Slated to launch on Android and Unreal Engine
- Metamask SDK Q1 Stats:
 - Jan: 2,073 SDK downloads
 - Feb: 5,925 SDK downloads
 - Mar: 6,309 SDK downloads

Q/Q increase in downloads = 325% growth

Source: MetaMask

- 1 Ideation and interest
- 2 Local development
- 3 Testnet deploy**
- 4 Mainnet dev activity
- 5 Scaling usage
- 6 Trends and insights

Developers deploy applications to testnets to refine their product on a blockchain that mirrors the mainnet environment without spending real ETH.

Despite headwinds, **devs kept building on Goerli**

But Goerli ETH became harder to get

Goerli faucet visitors vs. price of Goerli ETH (USD)

Which led to a new
Ethereum standard testnet:

Sepolia

As the new sandbox for developers, Sepolia testnet surged towards the end of Q1.

Daily visitors to sepoliafaucet.com

- 1 Ideation and interest
- 2 Local development
- 3 Testnet deploy
- 4 Mainnet dev activity**
- 5 Scaling usage
- 6 Trends and insights

Developers deploy tested applications to the Ethereum Mainnet when their product is ready to serve real users in a live environment.

Deployed Ethereum smart contracts retracted Q/Q but **grew Y/Y**

Q1 mainnet smart contracts deployed retracted beyond the previous quarter's anomaly spike, but resumed an upward trend on activity from quarters prior to that.

Ethereum mainnet smart contracts deployed per quarter

EVM Layer 2 (L2) contracts **grew 160% Y/Y**

Smart contracts deployed (Arbitrum + Optimism + Polygon)

L2 bridging users **got a big boost**

More users bridging to L2s suggests that cheaper, more scalable blockchains are resonating with end-users vs. using mainnet applications - as reinforced by successful airdrops from Optimism and Arbitrum during Q1.

Source: Dune

- 1 Ideation and interest
- 2 Local development
- 3 Testnet deploy
- 4 Mainnet dev activity
- 5 Scaling usage**
- 6 Trends and insights

As web3 products attract real users and find product-market-fit, developers need to scale their systems to support the increased consumer demand.

Builders loved Polygon on Alchemy

- 5 Scaling usage
- 6 Trends and insights**

From pressure on the traditional banking system, to a deep focus on web3 security, here are some insights and how the industry responded.

High-profile hacks drove adoption of enhanced web3 security tooling

Tools like Alchemy's Transaction Simulation APIs boomed as end-users demanded greater trust and safety:

Alchemy Transaction Simulation API requests

DEX volumes increased **post-SVB collapse**

The implosion of Silicon Valley Bank (SVB) and loss of consumer confidence in traditional finance contributed to a surge in transaction volumes on decentralized exchanges (DEXs).

SPOTLIGHT

Uniswap saw **record volumes**

Uniswap Protocol had its
highest volume day in history
on March 11th, 2023 (\$11.8B)

In March, Uniswap LPs
earned \$77M in fees

L2s now account for **35% of total**
USD Uniswap Protocol volume

Zero knowledge tech landed with a bang

Polygon and zkSync heralded the next chapter of scaling Ethereum with a flying start:

Web3 gaming took flight

Interacting wallets:

Planet IX retained a dedicated userbase Q/Q which grew significantly when they launched a second, more engaging layer to the game.

Transaction volume:

Planet IX saw users showing steady play-time through the amount of transactions, which heavily increased upon launching extended Play2Earn elements in the game.

Gas usage:

New layers and value between GameFi strategies and NFT utility, saw Planet IX’s gas usage explode, with players wanting to leverage as many opportunities as possible.

Methodology

Our aim

This report aims to provide an accurate and useful representation of web3 development. The following sources were used for data collection purposes: Dune (verified smart contracts), DappRadar (dapp count), Github and NPM (SDK installations and metadata), CoinGecko (token prices), and npmtrends.com

Thanks to our sources

Developer Activity: Alchemy

Smart Contracts, Bridging, and Programs: Dune

Market and Prices: DappRadar, CoinGecko, Dune

SDKs: NPMTrends.com, GitHub, NPM
