

Growing AppSec Chaos and Unmanaged Risk

Agile DevOps, cloud deployment, microservices and open source have all dramatically accelerated application delivery and complexity. Today's AppSec teams, outnumbered by as much as 100:1 by developers, depend on a collection of point security products and siloed manual processes. This leaves them struggling to gain the visibility, insight, & process scale they need to identify and protect the always changing and growing application risk surface.

This resulting AppSec chaos means applications ship fast without the assurance of shipping securely, resulting in unmanaged risk in production and leaving the organization at risk of breaches and losses.

ArmorCode AppSecOps - Eliminate Chaos and Risk, Operate Efficiently and Effectively, and Scale Success

The ArmorCode AppSecOps platform is the solution to this challenge, providing AppSec teams with the visibility, actionable insight, automation, and integration needed to build, deliver, and scale an effective and efficient AppSec program across the entire organization and DevSecOps pipeline.

Control AppSec Chaos

Reduce security and compliance risks through continuous visibility and actionable insight for posture, vulnerability, and compliance management

Achieve AppSec Operational Efficiency

Eliminate manual, repetitive and low value work across development, security and operations teams through automation and best practices knowledge base

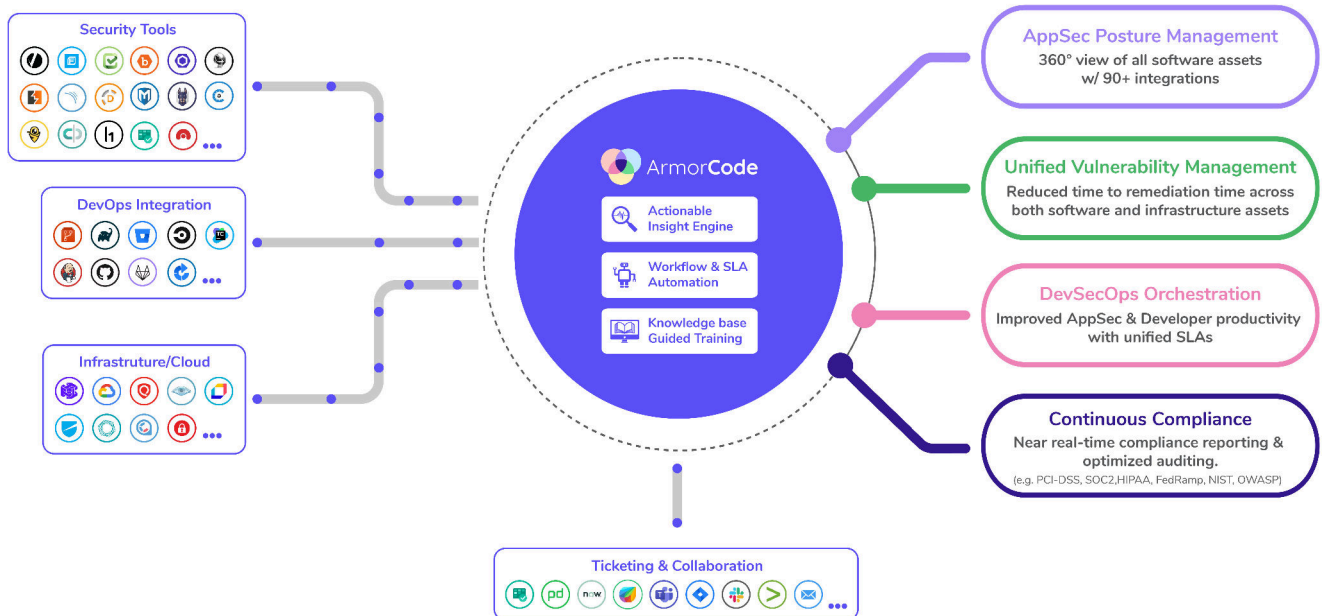

10x AppSecOps Force Multiplier

Scale AppSec success across the organization without significantly growing the team, tools, training or resources required

The ArmorCode AppSecOps Platform

A Single AppSecOps Platform

Combining AppSec Posture Management, DevSecOps Workflow Automation, Unified Vulnerability Management, & Continuous Compliance in a single solution.

360° DevSecOps Ecosystem Integration

+100 out of the box integrations with security, development, and operational products and systems

No-Code DevSecOps Workflow & SLA Automation

Enabling the management & tracking of cross-team SLAs & automated DevSecOps workflows to effectively "shift left" and scale AppSec success

An Extensive & Extensible AppSec Knowledge Base

Elevate tribal knowledge within the development team to scale best practices to all developers and AppSec team members

In the digital era of customer-centricity and "always-on" capabilities, security & compliance needs to be real-time too. ArmorCode is focused on enabling that vision.
