

LITEPAPER

AIRDOGE is a project on BSC(Binance Smart Chain) that researches and connects with new exciting projects on BSC and develops a partnership with them that lasts forever. While doing so, the project also rewards its holders with airdrops from these partners creating an extremely rewarding and profitable experience for anyone holding AIRDOGE.

We created AIRDOGE, because we believe that a real connection between project is the way to truly grow, rather than shallow “shills” dictated by inflated numbers, bots and spam. Our vision is to create a value proposition that is beneficial to everyone that interacts with our project and at the same time reward our holders by exposing them to new projects with big potential.

Our holders enjoy the benefits of getting airdrops on an almost weekly basis, creating a basket of new tokens in their wallets that have the potential to do hundreds of times the return and enrich them by just holding AIRDOGE. The way we can afford to do this is through our treasury which contains 50% of the AIRDOGE supply and is used to exchange tokens with our partners.

The total token supply of AIRDOGE is 1,000,000,000. 500,000,000(50%) of the tokens are in the treasury, while another 122,500,000 (12,25%) of the supply is locked in the liquidity pool. 91,400,000(9,14%) of the total supply was burned shortly after launch and will never be in circulation.

The end goal of the project is to become the marketing vehicle for new BSC projects and allow them to get real exposure through airdrops for AIRDOGE holders.
