

# Complete Padel Court Solution

2023 Court Collection

V1.2

**PADEEL™**  
COURTS ENGINEERED FOR THE UK

## Introducing Padel Plus

Courts + Canopies + Lighting + Ground Works + Installation

- + Independent British padel court & canopy company.
- + Importing market leading courts from a partner with 25 years' experience installing around the world.
- + Courts designed according to the International Padel Federation standards and manufactured to the highest quality and safety requirements: galvanized metallic structures to EN1090; tempered glass to EN12150; Mondo Supercourt WPT turf to UNE147301; industry-leading LED lighting from ProSportLED.
- + Integrated project management offering peerless customer support and liaison between all contractors.
- + Ground works partnership with Atlas Concrete ensuring all construction elements are offered as one service.
- + Management team with specialist knowledge of the sports market including a former professional sportsman who considers products from the players' point of view and an experienced manager of some of the most prestigious private sports facilities who understands how clubs commission new courts and infrastructure.
- + Our founders have advised public & private clubs on running facilities, building communities of players, recruiting and then managing coaches & management teams. Beyond supplying courts we can advise broadly on building successful padel clubs.

## Club & Panoramic Courts

### Permanent installations

Our premium Panoramic court provides a beautiful playing environment and a more elegant structure. The rear walls have no structural elements other than in the corners providing great visibility into and out of the court.

Our Club court provides maximum durability with minimum maintenance.

Each component from the steel frame, glass, artificial turf, lighting and court-side accessories has been developed to be a proud addition to the most demanding of schools, clubs or homes.

### Fully customisable

- + Paint
- + Zinc primer
- + Turf model and colour
- + Lighting pillars & ProSportLED asymmetric lighting
- + Nets
- + Corner trims
- + Protectors
- + Scoreboards
- + Benches
- + Ball bins & hangers
- + Doors
- + Ball stop nets
- + Fully guaranteed against defects in material and workmanship for 10 years (subject to proper maintenance)

**Uncompromising durability**  
Our courts are built to withstand challenging environments, including coastal locations around the British Isles. If you have the vision, we have the complete padel solution to build courts in extraordinary places.

## Pop-up Courts

For events or temporary installations

Temporary courts can be useful to enable exhibitions, tournaments or events to be staged in any number of locations where permanent courts would not be possible eg public spaces.

They can also be useful in the club environment where a pop-up court can be installed on an existing (potentially redundant) tennis court as a means of growing interest in padel before the club makes the long term commitment. They can be erected without planning permission, perhaps while permission is sought for permanent courts. This helps to generate revenue before the larger capital costs are incurred.

Pop-up courts can be converted to permanent installations later on, once appropriate foundations have been put in place.

## LED Lighting by ProSportLED

Padel Plus partners ProSportLED, pioneers of both indoor and outdoor racket sport lighting, to bring industry-leading LED expertise to our courts. ProSportLED's knowledge stems from understanding the needs of athletes, the capabilities of LED manufacturers and the qualities operators look for when fitting out their facilities. The result is an optimal playing experience and the benefit of energy savings and great customer feedback for operators.

### Outdoor and Outdoor Covered Space Lighting

Alongside noise, light pollution can be a significant problem in terms of planning considerations. If your site uses a symmetrical light fixture (direct) it is likely to be in a neighbour's line of vision. Diffusing the light will only soften its appearance whilst leaving the light very much in view.

The solution is an asymmetrical light fixture. The Maha product line from ProSportLED will illuminate the court precisely with all light fixtures installed parallel ( $0^\circ$ ) to the playing surface. Our light cut-off technology provides exact control with virtually zero light pollution (see image).

Other benefits include:

- + 20KV Surge protection from electrical storms
- + Optimal efficiency with a class-leading 145 lumens per watt, combined with the IPC WiFi controller can maximize energy savings by connecting up to 200 fixtures to 1 controller
- + The LED Converter technology from KMW excels when filming match play or tuition. The non-flicker converter allows for slow-motion filming at 1,500 frames per second compatible with broadcast 4k and 8k cameras

## Indoor Lighting

The PSL Sirius symmetrical linear light is the most advanced indoor court light on the Padel market.

The 'designed in Germany' polycarbonate injection-moulded lens is built tough (IK10) and minimizes glare and shadows. The result is a soft and uniform light with extremely low glare levels, up to now unknown on padel courts.

Other benefits include:

- + Bluetooth control via the Samsung Galaxy tablet (included) or Android smartphone
- + Class leading efficiency with 160 lumens per watt. This means greater light output at a lower energy cost with 20% better efficiency than other products on the market
- + Premium Samsung LED Chips ensure consistent and long-life illumination

**Left** | The Sirius indoor court product provides a wonderful even light combined with a tough casing to resist repeated ball impact.

**Above** | The Maha outdoor fixtures mounted at 0° to the court ensure optimal playing conditions and virtually no light spill into adjacent areas.

**Left & Bottom Left** | Whether indoors, outdoors or canopy-covered, Padel Plus courts are engineered and built to provide years of enjoyment and cost effective operation.

**Right** | It's all in the detail. Our courts are fully customisable including multiple branding opportunities.

## Ground Works

For every location...

A key point of differentiation for Padel Plus in 2023 is providing **ground works via our close partner Atlas Concrete**. Atlas is a subsidiary of BDCe Concrete, a California-based specialist with more than 20 years of experience and hundreds of satisfied customers. Their UK company has been formed specifically to provide padel court and sports infrastructure ground works. Atlas Concrete is a member of the Sports and Play Construction Association (SAPCA) whose foundation specification has been adopted by the LTA for padel.

Each padel court site must be evaluated on an individual basis with consideration for logistics (site location, movement of materials on and off site, ground conditions, presence of existing services or infrastructure). **We encourage site owners / operators to commission geotech surveys before contacting us** so all parties know from the outset what the likely project challenges will be.

Where a club or operator has an existing relationship with a contractor we will ensure they have the correct specification so the site is prepared to our needs.

# Why choose Padel Plus

## The Complete Court Solution

### Quality of Product

- + Our Spanish court maker has been active in the padel market across Europe for 25 years. They have built thousands of courts installing them around the world and have the resources and capacity to supply the fast-growing UK market quickly and effectively.
- + Steel and polycarbonate structural canopies have been engineered for the British climate with peerless quality of finish. We see the canopy as crucial to padel's success in the UK and are positioned with the best product and the resources to install them in volume.
- + Industry-leading LED lighting fixtures from ProSportLED.
- + Integrated ground works capability meaning we truly deliver a complete court solution.
- + Numerous thoughtful extras including courtside furniture, interior design for social spaces and changing rooms, and full installation of everything we offer.

### Level of Service

- + With an office in the UK to serve our customers and one in Spain through which we maintain close ties to our manufacturing facilities, we aim to provide exceptional service.
- + Many of the smaller companies serving the UK market, both British companies relying on Spanish suppliers, or Spanish companies trying to enter the UK, struggle with the language barrier and customer service. Padel Plus is native in England and in Spain, meaning nothing gets lost in translation.

### Strength of Management Team

- + Specialist knowledge of the sports market.
- + With former professional sportsmen at board level, our products are considered from the athlete's point of view, not just the technical teams who develop them. This approach has enabled particular innovation in court lighting where a combination of the player's needs and the LED manufacturer's knowledge, results in a greatly improved on-court experience.
- + We have 20 years' experience running some of the most prestigious private sports facilities and therefore understand the process of how a club commissions new courts and infrastructure. Our founders have also advised public & private clubs on running facilities, building communities of players, recruiting and managing coaches & management teams.
