For years, it has been our practice to provide safe, natural, clean cannabis. While no cannabis can be called "organic," we have adopted organic farming practices like using natural predators and non-chemical fertilizers. We have voluntarily developed rigorous quality standards for our flower gardens and use organic biologicals and beneficials. All products are used sparingly and approved by the Washington State Department of Agriculture for use on our cannabis. We also strive for sustainable practices to combat climate change and have implemented energy-saving LED lights, recyclable materials, composting, and moderating water consumption. We sparingly use mint oil, neem oil, and mycoinsecticide on our plants if needed.

PESTICIDES PROMISE
