

# Project Manager

REIMAGINING FACILITY COMPLIANCE

Project Manager is one centralized location that you can access all of the necessary tools for managing your construction projects from planning to completion. It contains a variety of resources for financial management, POs, vendor management, and milestones. You finally have access to a project management tool specifically developed for hospitals that is customized to match your process and meet your requirements! From one dashboard, you can access and manage all of your projects. We develop custom forms for you to compile all of the necessary information for each project in one seamless and easy to navigate page. If projects need approvals or information from multiple parties, notifications will automatically be sent out when a project is created. This means you can spend more time on other tasks and less time on contacting colleagues and in meetings. Project Manager includes all of our financing tools to streamline your purchase orders, invoicing, and general finance practices. Our online forms are built to match your current documentation and will pre-populate any physical documentation you require. We also tie in our Vendor Manager toolset allowing you to control every aspect of your vendor management process. You are provided a comprehensive list of every vendor or contractor and any associate information such as training, credentials, and project tasks.
