

Smartly Automate a Wide Array of Your Cumbersome Accounting Processes with Accounting iBoT from Our Plug-and-Play iBoT Store

Enhance Service Levels. Boost Productivity. Save Costs.

What does the Accounting iBoT do?

Most organizations still have a lot of routine processes that use employees to manually manipulate structured and unstructured data. The reason these processes have escaped automation until now is a mélange of traditional practices, cost of integration of systems and lack of organizational discipline around multiple process variations...The good news is our Accounting iBoT can smartly eliminate manual tasks to streamline workflows, improve compliance and reduce costs.

The Accounting iBoT operates just like a human would: it logs into a system, extracts information from various accounting applications, manipulates and reconciles structured data, performs calculations, fills in forms, communicates with other systems and logs out. It also generates invoices and can dispatch them through mails.

How is Our Accounting iBoT Unique in the Market?

Manual tasks and information silos that slow responsiveness won't cut it with today's consumers, who expect a fast and seamless customer experience. By smartly automating manual tasks at a fraction of the human equivalent, Accounting iBoT can deliver an immediate cost saving of 60-80% and free up your knowledge workers for more value-added tasks.

AI-powered Automation Solution

Multi-threaded, Scalable & Efficient Automation Solution

Reusable Solution to Cater to Most of the Users
