Water Management System

Powered by Flecto Sense

-  The concentrator facilitates AMR (Automatic Meter Reading) to read meters on fixed network, walk-by or drive-by modes.
-  Immediate feedback to users on water usage, credit balances, excessive usage detection and leak detection.
-  The system enables the user supported functions to be collected via the radio.
-  Enable users to manage their water consumption and track usages.
-  All communication is secure, only you have access to your user account and data.
-  Facilitate revenue collection.
-  The system caters for future expansion to full AMI (Advanced Metering Infrastructure), aimed at automating all facets of meter management.

Unique

The system is unique in the way the data is always encrypted. Your data will never be in the wrong hands. Know exactly what is happening on the ground while not having to spend time in the mud.

Target audience

Will this be the solution for you? Ask yourself how much time is spent on accurately getting the data for every unit you manage. Just the billing hours should justify having an FSC solution for your business.

Business in a box.

Without accurate data the reading doesn't mean much. The FSC will get you the results you need, every time. You can count on accurate readings, timely responses, data that you can use and report the way you want to.

Smart ideas

By partnering with a technology company that is on the bleeding edge, you position yourself to always be a trend setting firm. This is what Flecto Sense does daily for hundreds of customers. Join us today.

Location

The FSC should be placed central to all your meters. A single FSC can handle up to 2000 water and electricity meters. The higher you can install the unit the greater the area you will cover.

Make more profit.

Imagine having a dedicated person for each building. Someone you can call to check the reading of any meter, any time of the day. How much would that person cost your company in a month?
