Immunity

Eliminate blind spots in your security architecture

RPC   O₂   Equa bank

ALD Automotive   ŽELEZIARNE PODBREZOVÁ   Moravskoslezský kraj

ČESKÁ ZBROJOVKA   Union Pojišťovna   HBM Pharma

Fully control and protect DNS communication and resolution regardless of your network's size and complexity.

All connected devices protected

Home Office Security

Defend against known and unknown threats

All users' devices are protected with one account. From laptops, smartphones, servers, and even IoT devices. Every online activity is secured, including browsers, messenger apps, emails, or text messages

Whalebone's Home Office Security app enables protection for home office/remote workers no matter where they're working from, and gives you the same level of visibility and control as if they were in the office.

By using machine learning techniques and statistical analysis, we can detect possible online threats in the network every second. Our threat intelligence instantly passes the data on to resolvers and eliminates false positives

Same day security, network wide

Whalebone immunity deploys in a matter of hours, providing platform independent security that's always available.

Integration

Whalebone Immunity is easily and frequently integrated with Active Directory, SIEM, Log management, anomaly detection systems, endpoint, and operational monitoring tools.

Enterprises of all sizes

Immunity supports both on-premise and cloud-only resolvers. Both can be combined within one multi-tenant account, suitable for protecting branch locations and headquarters at the same time.

Efficient use of network admin time

Immunity allows administrators to fully devote their capacity to their primary activity and deal with incidents that they are notified of by a real-time alert. Immunity can carry out work on its own and automatically enforce security policies in DNS traffic, allowing admins to review only short assessments provided by email.

Full visibility and security against multiple threats

Immunity can be placed between the endpoint and the domain controller, giving administrators full visibility to the IP address of individual devices, while providing protection against diverse attacks like phishing, harmful network communications DNS tunneling, and more.

> **For the first time in my career, I have experienced such a quick and seamless integration of security technology into the whole network.**
>
> **Miloš Vodička**, Head of IT, Aero Vodochody
