

Netnology Services Platform (nSP) Data Sheet

OVERVIEW

Netnology Services Platform (nSP) supports cross-domain software-defined solutions on multiple platforms. This means that you can show a Demonstration or a Proof of Value (POV), train using hands-on labs, and implement a production deployment of next generation software-defined solutions without needing a huge team of experts or a large investment in infrastructure.

Designed to help enterprises and service providers test, train, sell and deploy SDx solutions more effectively and efficiently, nSP dramatically reduces time from concept to value. Adopted by the Cisco Mentored Install and Training (MINT) Program, nSP is the platform of choice for numerous MSPs, resellers and enterprise customers who want results.

“nSP helps partners close deals today while mentoring them on repeatable motions they can incorporate into their sales and service practices.”

- Jason Gallo, VP, Worldwide Sales, Global Partner Sales Cisco

Simplify SDx solutions across Data Center, WAN and Campus environments.

NETNOLOGY SERVICES PLATFORM (nSP)

Demo & POV

Customers can leverage nSP for Demonstrations of specific use cases and for deploying POV environments for SDx solutions.

Cisco SD-WAN and SASE Proof of Value (POV) are some of the service offerings which leverages capabilities within nSP to deploy and scale SD-WAN and SASE environments within minutes.

Training & Sales Enablement

In addition to Demo & POV, nSP provides a robust virtual training environment that includes self-paced training with hands-on labs.

Customers can create customized training or take advantage of Netnology's library of self-paced training modules, scripted Demo, and online videos.

Production Deployment

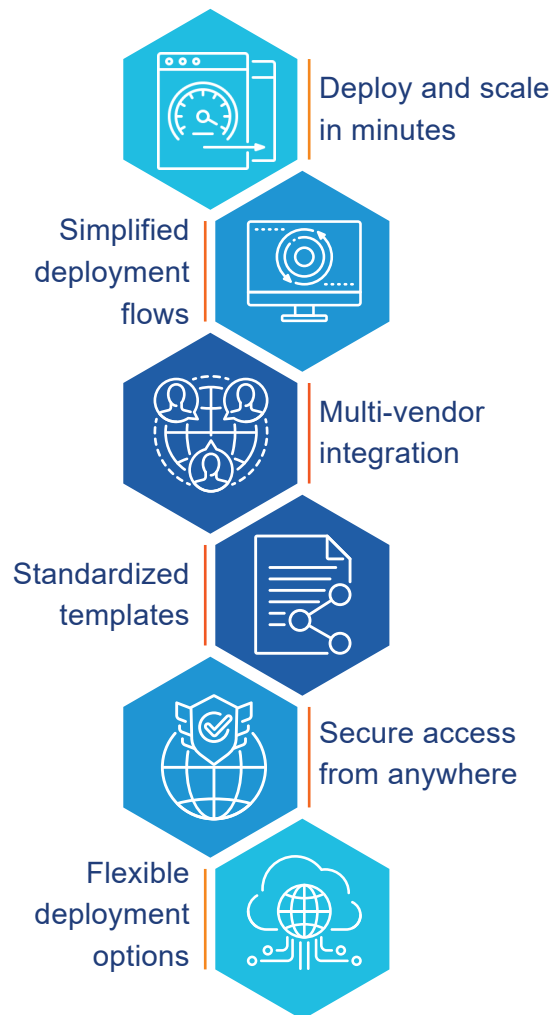

One of the key advantages of nSP is the ability to use the same platform for production deployments as for Demo and POV.

A prime example is the production deployment of Cisco SD-WAN hosted on nSP.

nSP KEY FEATURES

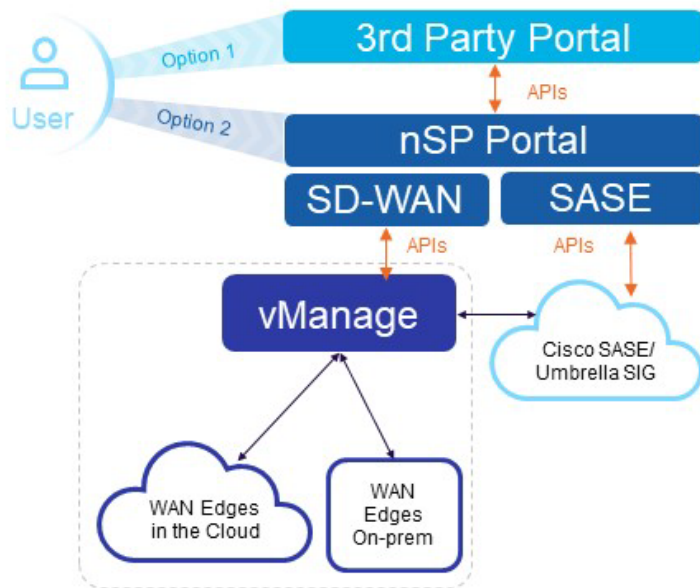

nSP key features are designed to help VARs, enterprises and service provider customers of all sizes explore, adopt, and deploy SDx and Cloud solutions.

nSP Services Examples: Cisco SD-WAN and SASE

Cisco SD-WAN is a flexible cloud-managed networking solution that meets the complex needs of modern WANs. Cisco delivers the complete range of SASE capabilities through several networking and security components.

nSP Cisco SD-WAN and SASE Deployment Models

nSP simplifies the provisioning of Demo, POV, and production deployment of Cisco SD-WAN and SASE to accelerate the time to value for enterprises. In a few simple steps, customers can leverage nSP to implement Cisco SD-WAN and SASE in various deployment models, all leveraging APIs to integrate nSP with vManage and Umbrella and to automate provisioning.

netnology

**-50%
Less
Complexity**

Pre-defined templates & policies, drop down menus for use cases.

**80+%
Faster
Deployment**

POV: 40 hours down to 4 hours
LD: 80 hours down to 8 hours

**Up to 40%
OPEX
Reduction**

Reduced operational costs through simplification and streamlining.
