

Establishing a Lead Free Drinking Water Program

This workshop focuses on creating safely managed drinking water services and adopting national policies and regulations based on international standards and testing/certification requirements for products and materials used in drinking water systems. This workshop will provide the tools and knowledge to establish a lead-free drinking water program.

Attend if you are interested in learning:

- The basics of lead in drinking water
- How to establish and sustain a lead-free drinking water program
- How to monitor water quality and meet international standards for lead in water system components
- How to work with manufacturing companies to procure lead-free parts
- How to work with the global water sector to ensure communities are not exposed to unsafe levels of lead from water
