

ATRIA

FRONT END ENGINEER

1. JOB DETAILS

Reports to: Lead Systems Engineer

People Responsibilities: None

Department: Atria

Benefits: Pension, Generous Holidays, Wellbeing Services, Volunteering Scheme, Perkbox Platform

2. ABOUT ATRIA

We specialise in parking and software solutions. Our mission is to disrupt industry norms, to innovate, and to provide professional, ethical, customer-focused services.

We believe that companies are made by people, but smart application and development of software are key to achieving business goals. We're a flexible, pioneering, and forward-thinking company with a mission to change the parking industry with our customer-focused software.

Atria is aiming to become the most trusted provider of technical solutions in the parking sector.

2. JOB DESCRIPTION

We are looking for a Front-End Engineer to join our growing, dynamic team. You will contribute to the development of features, fix bugs and issues, review code from others in the team, and make a key contribution to the entire development lifecycle, from conception and discovery through to development and delivery.

You need to be able to work with others across disciplines - collaborating with UX designers, backend engineers, testers, and project managers. You'll help create team goals and objectives, contribute feature ideas, discuss the future direction of products, and give input on how we can improve as a team.

You'll have opportunities to grow and specialise, while supported by a friendly development team. We want you to be passionate about the future of technology in our industry, and the impact you can have. You'll be part of cross-team groups and meet-ups focussed on topics such as accessibility, security, development practices, continuous delivery, and many other areas of interest.

3. SKILLS AND EXPERIENCE

We don't expect anyone to have experience of all the below, but this just gives an example of the technologies and practices we value. However, demonstrable skills in React are advantageous.

- React, React Native, HTML5/CSS/JS
- Functional Programming – Java / Scala
- API creation and integration - experience working with Web Service-related technologies, including SOAP and REST
- Testing tools and approaches
- Cloud engineering platforms such as AWS
- Engineering principles, OO, and design patterns
- Delivering large-scale projects within an agile multi-disciplined team
- Atlassian products such as JIRA, Confluence, BitBucket.

4. OUR IDEAL CANDIDATE

- Has strong and effective communicator who can clearly explain complex technical information
- Has strong oral and written communication skills, able to deliver messages clearly and confidently at all levels
- Has the ability to maintain and build relationships with key people at all levels
- Is a motivated, self-starter, able to work alone or as part of a team
- Is a team player who shows respect and values the views of others, whilst being flexible and resilient to change
- Has a consulting mind-set which, through a measured approach, sees the project through to a successful conclusion
- Has credibility and impact that drives commitment and passion
- Is pragmatic and thoughtful judgement on risks and issues
- Works in a collaborative way, with a personal 'edge' which delivers excellence.

5. SPECIAL WORKING CONDITIONS

You will be required to travel to external meetings, on occasion.
