STOCK MONITORING SENSOR

# STOCK MONITORING SENSOR

Distance

## Attentive

- Detects whether a pallet is present at a certain place
- Detect the amount of material by height differences

## Reliable

- Enables transparent and efficient processes

## Robust & Flexible

- Dirt resistant
- Battery operated
- Distance to pallet up to 6m
- Can be attached to ceiling, floor or wall

## Integrative

- Connection to ambos.io cloud via gateway

# STOCK MONITORING SENSOR

Workflow

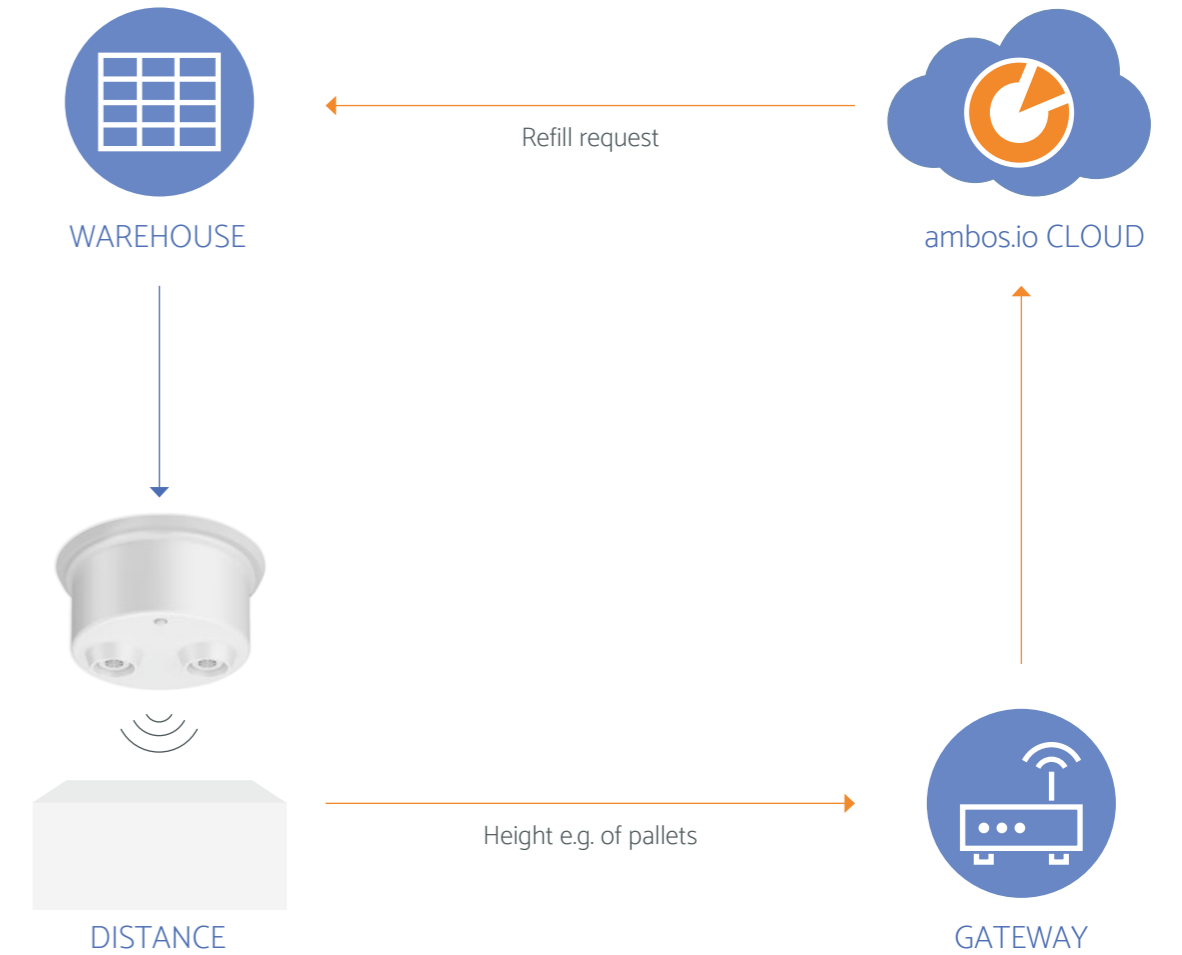

The Stock Monitoring Sensor – Distance detects the height of a stack of pallets and sends the data via a gateway to the ambos.io cloud. It triggers a notification whenever the stack height crosses a pre-determined threshold.

Alternatively, the sensor can report whether a specific position is occupied by a pallet.

Thus, pallets can be replenished or collected in time.

# STOCK MONITORING SENSOR

Floor

## Attentive

- Detects whether a pallet is present at a certain place
- Display of free or occupied storage space

## Reliable

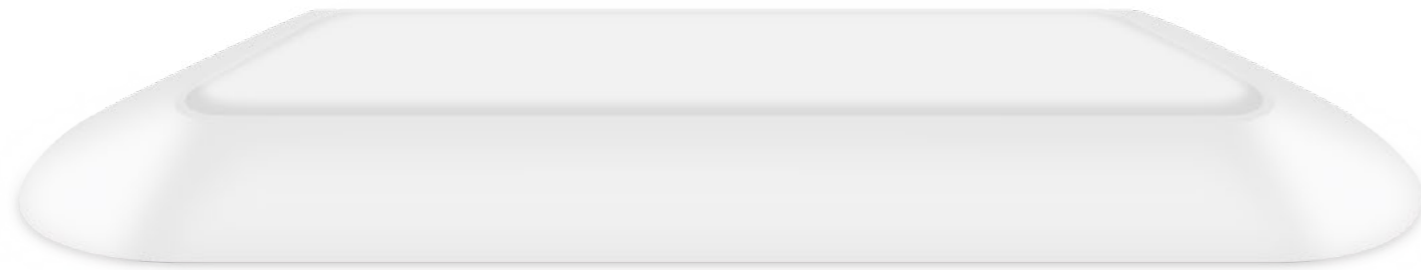

- Provides a transparent overview of your supply chain and availability of your storage space

## Robust & Flexible

- Dirt resistant
- Battery operated
- Attached to the ground

## Integrative

- Connection to ambos.io cloud via gateway

# STOCK MONITORING SENSOR

Workflow

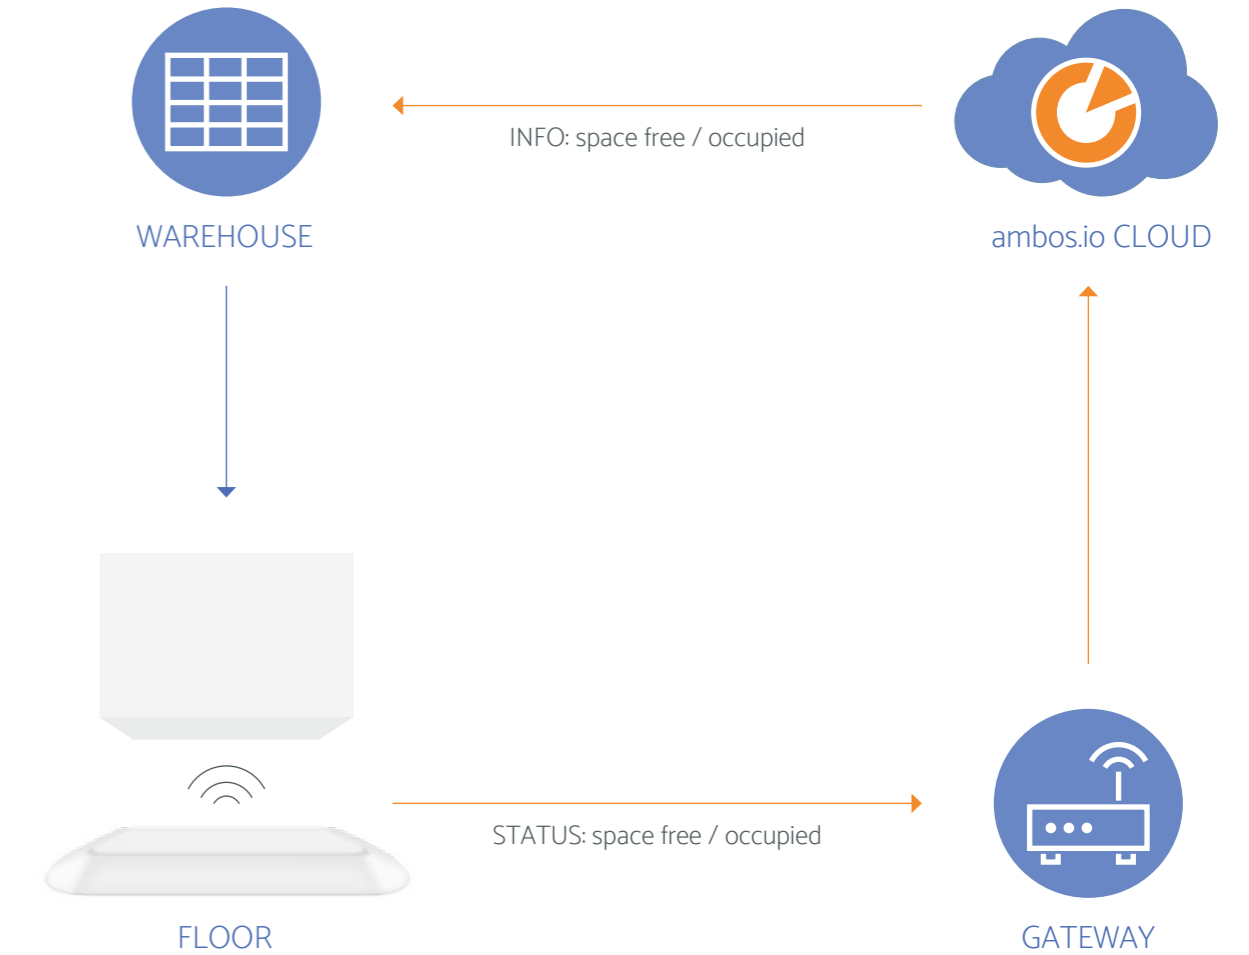

The Stock Monitoring Sensor - Floor detects whether a space is free or occupied and sends the data via a gateway to the ambos.io cloud. It triggers a notification as soon as an occupied space becomes free again.

Alternatively, the sensor can report whether a specific position is occupied by a pallet.

A perfect optimization of your own storage space and delivery processes.
