# How we will proceed

- **Gather the requirements 1–2 days**

Define the task, objectives and a desired outcome.  
If we have enough data, we will assemble a project team and start the estimation process.

- **Estimate the terms and cost of work 1–3 days**

Based on the available data, our development team will estimate the duration of work.

- **Sum up and start the development 1–2 days**

While we're taking stock, our developers will have everything set up and start making things happen.

# Social Proofs

- We launched a [free training program](#) for those who want to become developer. 35.000 students have undergone our training program.
- We created an [open development roadmap](#) for managers who wants to dive into web3.
- Our open-source charitable project [Donat.Pool](#) is used for collecting donations for non-profit organizations.

# Warm intros

Over the years, we have built a large network of partners in over **150 funds and 30 accelerators**, and now we are ready to provide free introductions to our clients.

We can make the warm intro for you to our partners to help you promote the project and raise investments.
