

DATASHEET

METAL RECYCLING

THROUGH A STRUCTURED GROWTH STRATEGY, JOHN LAWRIE GROUP HAS INVESTED HEAVILY TO MEET BOTH CURRENT AND INCREASING FUTURE DEMAND FOR REUSED AND RECYCLED PRODUCTS.

The scrap and metal recycling division has its roots in the original John Lawrie business – and it continues to be a key element of the group’s ongoing success.

John Lawrie Group is one of the largest reprocessors and exporters of scrap metal in Scotland. The company has established processing facilities in Aberdeen, Montrose, Evanton and Shetland where they sort and process scrap metal ready for recycling into new steel products. With the addition of a new quayside facility in Dundee opening in 2020 bringing combined annual licensed tonnage to 360,000 tonnes, John Lawrie is your metal recycling partner of choice.

All of the company’s metal recycling facilities are fully licensed and, as such, are regulated by the Scottish Environment Protection Agency. This ensures all activities comply fully with strict operating procedures, particularly in the areas of health and safety and environmental protection.

The sustained investment levels in its recycling operations throughout Scotland underline the group’s commitment to providing state-of-the-art processing facilities for both ferrous and non-ferrous metals. This proactive, investment-led approach yields a win win situation for both John Lawrie Group and its customers alike.

Great importance is placed by the group on keeping up to date with the ever changing and increasingly complex environmental legislation associated with the metals recycling industry.

As active members of the British Metal Recycling Association and with representation on its Board and Legislative Policy Group, John Lawrie Group keeps itself well informed and ahead of current and pending legislation.
