

# Technical documentation

In line with our policy of making our solution as simple as possible to activate, Zeppto does not require you to undertake any API integration, nor SDK installation for most features. Our solution is instead:

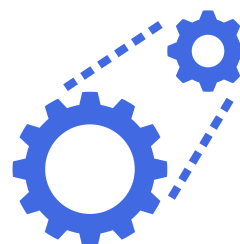

**Easy to activate on any e-commerce platform.** It is based on a JavaScript library only. Add this library to all pages of your website. See detailed instructions for installing the tag here:

<https://www.zeppto.co/how-to-install-tag>

**Non disruptive.** Your regular checkout stays untouched

**Adapted to your processes.** All orders facilitated by Zeppto are technically processed and confirmed through your regular checkout (authorisation, capturing and accounting stay untouched)

**Adapted to your checkout.** Our solution is adapted to your website's interface by Zeppto developers, and not the contrary, so you do not have to code anything

**In page and adapted to your design.** The checkout does not redirect and is a natural part of your website

**Quick and efficient.** It does not affect website performance and can be loaded asynchronously
