PHP Backend Developer (PHP / Javascript, full or part time)

Are you looking for new challenges? Development is part of your DNA?
Your eyes sparkle with enthusiasm when you talk about PHP and Javascript, Python a.s.o?
You like to work independently and keep track of complex topics?
Do you have the courage to break new ground and see change as an exciting opportunity?
Do you have the potential and the drive to be part of a growing business?
Your like to look beyond boundaries?
Then our company is your perfect place to be.

Working with ibiola means that you can live your potential in a motivated team and use your skills and creative approach to create the future by developing software solutions that can help to transform the world of mobility.

Who is ibiola Mobility Solutions GmbH (IMS)?

We are a young, innovative Austrian software company based in Vienna and Graz. With Energie Steiermark as majority shareholder, we have a solid and renowned partner in the background and thus a stable and long-term basis.

Our core competence is the development of solutions for fleet and pool management, car-sharing, vehicle and machine tracking, Mobility as a Service and Mobility Sharing. Our customers are national and international players from the public and private sectors that use our platform technology to integrate and standardize information and processes. Our products are characterized by a modular architecture and integrability into almost any existing system.

Our team designs, develops and integrates software solutions for vehicle fleets and mobility providers.

Your responsibilities

- You are a fundamental part of a competent and committed team and drive the development of our solutions together with your colleagues.
- You implement new features and techniques in existing and future products.
- You program in current programming languages and enhance the basis for our products.
- You have innovative ideas, bring in your experience and set milestones in backends.
- You develop API interfaces for our end customer user interfaces (browser and app).
- The further development of our complex mobility platform is also part of your tasks.
