

To whom this may concern:

Here at AutoNation Inc. one of the most mindful principles is the ability to drive forward responsibility. Concerning buildings and maintenance, AutoNation consciously looks to reduce the negative impacts on our local and most importantly Global environment. In our mission to sustainably light our facilities we have conducted considerable research between different LED technologies. As is the case with all such research there can be many goal reaching setbacks and shortcomings that cause apprehension in choosing an LED partner to “hit the mark”. I have found repeating issues regarding high energy consumption, elevated maintenance costs, and uncontrolled brightness levels. Regarding LED technology, we gauge product effectiveness on its ability to save energy and reduce maintenance costs demands. During the period of the last 5 years and “baking” many products with various manufactures only one company has come to hold itself to my lofty standards with a 0% failure rate. This company is ACDOB LED.

I am writing this living testimonial as I have experienced firsthand the effectiveness of the ACDOB LED product. This AC luminary functions without a ballast and to date has required “No Maintenance” That is correct! In the last five full years these lights we are “baking” have required Zero Maintenance! After many active years of trial and error with other LED product lines to alleviate our financial burden in our lighting budget, I believe that ACDOB LED is the perfect fit to improve our daily operations by allowing us to allocate these tremendous savings for other budget concerns. I believe we will reduce maintenance costs and take our overall customer service levels to new heights. I also acknowledge this to be and industry wide problem. I fully recommend you consider this company. I welcome any conversation needed in person or site visit to see these light real time.

I honestly believe Bartholomew, his product line at ACDOB LED will light a new dawn in the world of LED technology.
