

## UtiliPad

### *Charging Asteri Batteries from a Vehicle*

1. Charging an Asteri in an environment that is not temperature controlled can damage the life of the battery and device. Further, charging an Asteri while in the “ON” position, especially in a vehicle can damage the circuitry from power surges. Therefore, Tri-Global **does NOT RECOMMEND** or provide a vehicle charger for Asteri receivers.
2. However, Tri-Global does recommend the use of an external battery charger. Asteri External Battery Charger, PN 008-0000-0009, can be used with a DC adapter or inverter to charge a spare battery while the primary battery is in use. Alternatively, a Universal Charger such as the one below can be used.
3. DigiPower, Re-Fuel universal charger comes standard with AC wall adapter or a DC power adapter and can even charge from USB. You can order one from Tri-Global for \$50, or find one at a local Best Buy, Walmart or even online retailers like Amazon and eBay.

Charge on AC

Or with provided DC Adapter
