

Bed Claw® #35 Hook Plate Conversion Kit Assembly Instructions

Included Parts:

- (1) #35 Hook Bracket - Left Side
- (1) #35 Hook Bracket - Right Side

Included Hardware:

- (4) ¼-20 Bolts
- (4) ¼-20 Lock Nuts

Recommended Tools:

- 7/16" Wrench or Socket
- Someone to Help You

Step 1

Gather necessary tools, and ensure all parts are present.

Step 2

Attach #35 hook bracket to headboard or footboard bracket using bolts and nuts provided. (See Fig. 1)

- The #35 Bracket can be adjusted up and down as needed to meet the height of your headboard or footboard, but make sure you are still able to install both bolts.
- Make sure the nuts are tight to help prevent any movement later.

Step 3

Repeat Step 2 for the remaining bracket on your headboard. Make sure to measure the height of the first #35 bracket you installed before attaching the rest so they are all installed at the same height.

Step 4

The #35 Brackets can be installed upside down if so desired. (See Fig. 2) This is useful for "floating" headboards which don't have legs, or if you have a tall bed frame and need the headboard raised up. If you install them this way, make sure to consider the strength of your bed frame as it will be supporting the headboard.
