

Endless possibilities

## Integrations

Modern software systems data belongs to the users of the system and should be easily accessible in the format best suited to the organization.

This is why Ubiqisense data can be integrated to through the open RESTful API, MQTT or via BACnet over IP directly into any building management system.

# Agile platform

## API

If you already are collecting insights into the use of your meeting rooms and collaboration spaces, you can integrate Ubiquisense people count data directly into any booking system or workspace management platform through the open API.

This will help you:

- Compare time booked with actual usage to better plan
- Release unused booked rooms and eliminate ghost meetings
- Automatically make room booked when ad hoc meetings occur
- Release room for new bookings, when it has been vacated

# Scalable

## BACnet

Add eyes to the building with Ubiqisense to ensure:

- Only use energy where people are present
- Adjust HVAC to the amount of people present
- Close off areas when only few people are in the building
- Higher wellbeing and productivity due to people centric building automation

"With Ubiqisense's people counting solution in our entry/exits, we connect the data to our building management system, resulting in reduced and smarter ways of utilizing energy consumption."

Peter Weitzmann  
Concept Development Manager

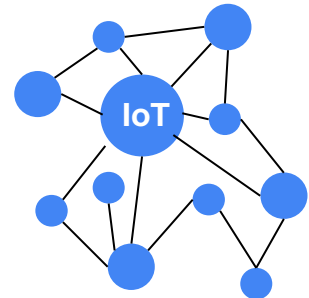

# More choices

## MQTT

Measure building data such as CO2, temperature or noise, or receive other environmental sensor data.

Collecting the data in one single place, and adding occupancy data on top, will add another meta-layer of understanding as to the “why”.

# IP cameras and video management

## Analytics

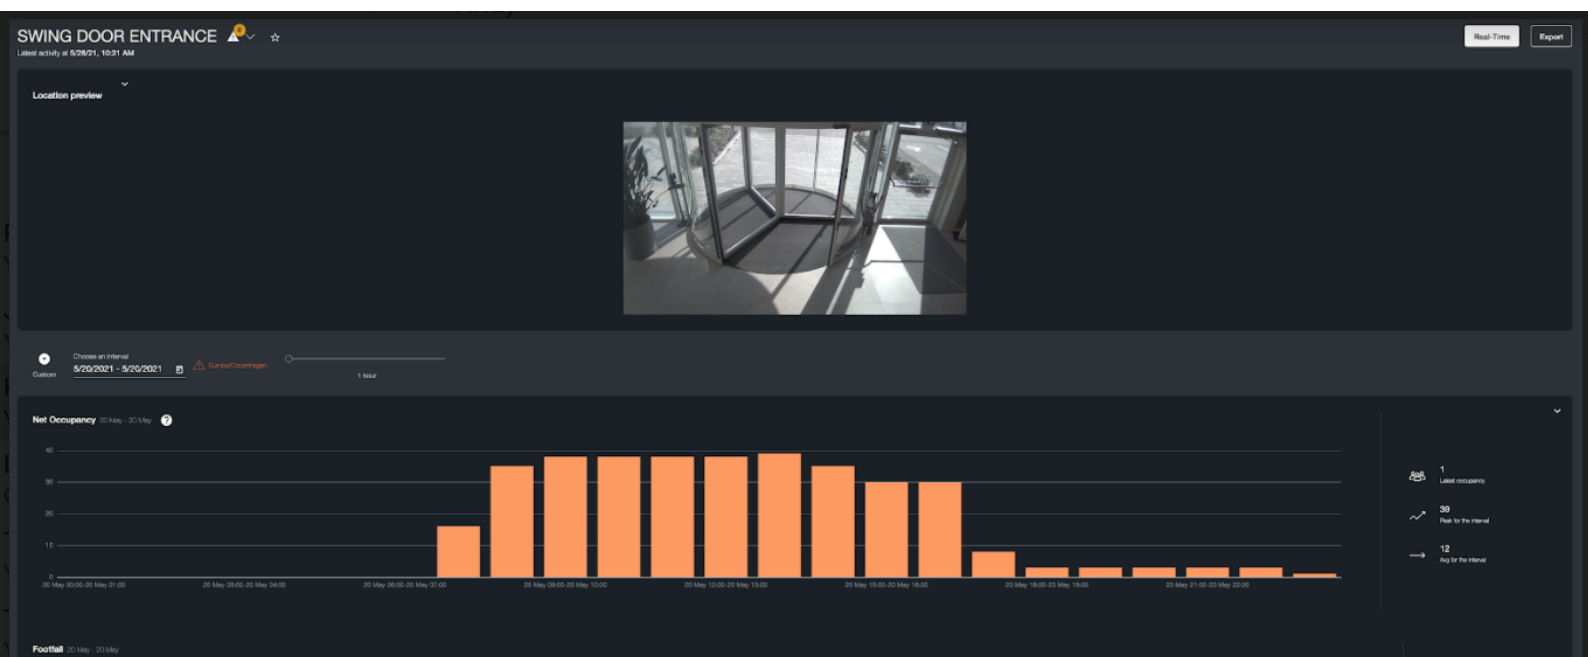

Deploy analytics on any IP-based camera or VMS, with no changes to your existing camera infrastructure. Great for larger areas such as production facilities, warehouses, shopping centers, and outdoor environments.

## How does it work

If you already have hardware installed, such as IP cameras, you can use our software to monitor occupancy and people flow.

Ubiqisense easily integrates to help translate videos feeds into anonymous people counting and detailed reports - ideal for large spaces and outdoor areas.

## Technology partners

Workspace Management, Booking system, Video management, and more..

## Our mission

### Empowering human interaction

We transform spaces  
into a living and  
intelligent environment  
which stimulates  
productivity and  
ultimately shapes the  
21st-century workplace.
