

Software Developer Co-op

Who we are:

KeyOps is a health technology company founded by doctors whose mission is to create relevant and meaningful engagements between key opinion leaders and the life science industry. We have combined our medical and industry expertise with advanced technology that induces instant access, high engagement, actionable market intelligence and powerful analytics. At KeyOps you can use your skills to do meaningful work in a fun and challenging environment that promotes learning, growth and opportunity.

What we are looking for:

As a developer co-op you will be tasked with building a mix of front-end and back-end features directly supported by senior developers. Each feature will be built with both security and user accessibility in mind. A successful candidate will be able to QA our application, deliver quality code, and contribute to the user experience and stability of our systems.

Required Skills

- Knowledge of modern Javascript, at least ES6
- Knowledge of CSS up to at least CSS3 standards
- Knowledge of a front-end framework like React, Vue etc
- Knowledge of SQL based databases
- Experience writing unit tests

Nice to Haves

- Experience working with a variety of npm packages
- Knowledge of mobile first responsive design
- Experience writing accessible HTML
- Experience working with React hooks
- Experience working with Material UI
- Experience working with GraphQL
- Experience working with AWS
- Knowledge of basic cyber security

If you are looking for a fast-paced work environment where you can take our technology to new heights, this is the place for you! What we offer:

- Meaningful work
- As a small, agile team, we offer roles with impact
- Your contributions are integral, your voice will be heard
