Service and Solution Expertise

Data Strategy

- At Summit2Sea we understand that data strategy and strong data management functions are key for our clients and our consultants work closely with the stakeholders to understand their data, develop strategy and governance
- Actionable data is central to any business and the need to have accurate and timely data to manage critical operational and strategic functions is growing

Data Warehousing and Modeling

- We understand that organizations may have many different sources of data within their organization from different systems such has human resources, procurement, finance and contracting
- Our solutions are centered around data integration with secured access. We have experience providing on-premise or cloud-based infrastructure to turn disparate data into integrated, actionable information

Business Intelligence Reporting and Visualizations

- We combine our knowledge of financial data source systems, data modeling/structure, and financial operations to provide meaningful reports and visualizations
- We have the ability to automate data reporting, create executive-level dashboard and secure data based on roles or responsibilities within an organization
- This ensures that all stakeholders are getting the right data, at the right time

Predictive Analytics

- We implement cutting edge machine learning capabilities by streamlining model building to help our client predict outcomes based on historical data
- Transforming data into future insights, we improve reliability, cut costs and streamline their operations

Data Engineering

- We understand that deploying a data platform is just the beginning of a full solution
- Our forward-thinking, holistic view to data takes into consideration your future data needs
- Our data engineering expertise centers around designing and building systems for collecting, storing, and analyzing data at scale

Cloud-Based Analytics and Reporting

- We know how to store and analyze data in the cloud and using it to extract actionable business insights
- Similar to on-site data analytics, cloud analytics algorithms can be applied to large data collections to identify patterns, predict future outcomes and produce other information useful to business decision makers

Client Focused

Summit2Sea Consulting (S2S) is an information technology and management consulting firm that provides hyper-personalized, innovative solutions to federal and Commercial clients by combining people, process and technology. We enable transformation by combining our functional expertise, technology and process design. Summit2Sea specializes in delivering in data analytics, system integration, AI and intelligent process automation
