## TOKEN DETAILS

# LUCKY SHIBA INU

### TOKEN DETAILS

NAME	LuckyShibaInu
SYMBOL	LSHIB
PLATFORM	BINANCE (BSC), BEP20
TYPE	MEME, UTILITY
TOTAL SUPPLY	1,000,000,000,000,000 (ONE QUADRILLION)

CONTRACT ADDRESS    0X972DD7C2F1C1D8B97DFBC177416E469646706588

### DIGITAL PRESENCE

TELEGRAM	<a href="https://t.me/luckyshibainu">t.me/luckyshibainu</a>
TWITTER	<a href="https://twitter.com/LuckyShibaInu">@LuckyShibaInu</a>

1. Ensure contract address is correct before initiating buy/swap.
2. Join our official telegram group. Beware of imitators.

## FEATURES

# LUCKY SHIBA INU

Lucky shiba inu is a Hyper Deflationary, sustainable meme token bringing you more luck with every buy, granting you chance to win thousands of dollars in lucky draw all day long, 24/7. Massive lucky drops to thousands of lucky buyers every week with upto 50% additional tokens for community participation.

Upcoming utilities include

1. AIO dApp which combines the powers of decentralised applications with integrated wallet.
2. Rare and limited NFT collection with usecase
3. Online block chain Casino Game.

Lucky shiba inu has combined maximum possible features that a BSC token can offer and forged them all into one single token. There is simply no other token with these many benefits and features.

## FEATURES

There are the features of Lucky Shiba Inu

1. Lucky draw
2. Hyper deflation
3. Rewards
4. Buyback
5. Liquidity
6. Marketing and development

All features are explained in detail in their respective pages.

# WHAT IS TOKENOMICS

Tokenomics for buy and sell are different and are distributed across all the features as below.

<b>Features</b>	<b>Buy - 9%</b>	<b>Sell - 16%</b>
Lucky draw	3%	3%
Hyper deflation	1%	1%
Rewards	1%	1%
Buyback	1%	2.75%
Liquidity	1%	2.75%
Marketing & Development	1% + 1%	2.75 + 2.75%

The buy slippage is 10%+ and sell slippage is 18%+

There is an inbuilt anti-pump and dump mechanism which restricts huge sell offs to protect liquidity and control price fluctuation.

It is explained in detail further below.

# WHAT IS LUCKY DRAW

Lucky Shiba Inu grants you equal chance to win the entire lottery bag with a minimum buy. You will be able to win hundreds if not thousands of dollars all day, 24/7.

Shiba Inu buries 3% of every buy and sell transactions into the lottery pot and grants the qualifying buyer a chance to win the entire pot. When certain threshold is reached, with every qualifying buy a random number will be rolled between 1-1000. If the rolled number is less than a certain number (called the chance), you will win the lottery pot. Eg, If chance set to 5%, you will have to roll any number below 50 ( 5% of 1000) to win the lottery pot. The price pool will grow bigger and bigger until a qualifying buyer rolls a number below 50.

You will be automatically enrolled into lucky draw when you buy \$20 equivalent of lucky shiba inu tokens.

## WHAT EFFECT DOES IT HAVE?

This unique feature increases the buy pressure as the chance to win the lucky draw with every buy is very high and it runs 24/7. You could win hundreds or even thousands of dollars. Eg, if 24 hours volume reaches just 1 million, buyers would have won \$30,000 in a single day. And with qualifying buy set to as low as \$20, this will make buying lucky shiba inu a habit rather than just holding it.

1. Threshold, win chance percentage and the qualifying buy will be set and varied to incentivise and motivate holders to buy lucky shiba inu.
2. Winner will be announced by our bot in our Telegram channel.
3. /lottery command can be used inside our Telegram channel to view the amount currently in the lottery pot, chance to win in percentage, minimum qualifying buy, previous winner and time won.

## WHAT IS ULTRA -

# HYPER DEFLATION

Luckyshibainu tokens are burned through multiple ways and removed from circulation forever. The total supply is therefore reduced which increases the value of your token.

Tokens are burned in four different ways.

1. 1% of every buy and sell is burned
2. Tokens brought through buyback function is burned automatically
3. A share of rewards will be sent to the burn address
4. Periodic burning of tokens

This makes it truly hyper deflationary.

### Periodic Burn

15% of the total tokens will be burned in stages in a scheduled manner as the community grows to motivate more buyers to buy and hold.

STAGE 1 - 500 HOLDERS - BURN 3%

STAGE 2 - 2000 HOLDERS - BURN 3%

STAGE 3 - 5000 HOLDERS - BURN 3%

STAGE 4 - 15,000 HOLDERS - BURN 3%

STAGE 5 - 25,000 HOLDERS - BURN 3%

---

**Total - 15% of total supply**

---

These tokens will be locked with Pinksale and released as per the vesting schedule. Each stage is unlocked by the current number of holders and corresponding percentage of tokens from the total supply will be burned in a split fashion over a prolonged, undisclosed time frame to avoid price spikes.

CONTINUED...

# **HYPER DEFLATION**

## **HOW BURNING IS ACTUALLY DONE?**

Burning is done by transferring the tokens directly to the burn address. Since anything that is sent to this address is forever lost and irretrievable, sending \$LSHIB tokens to this address permanently reduces the circulating supply.

This can be verified through BSCScan and Moonscan.

## **WHAT EFFECT DOES IT HAVE?**

Periodic burn will result in raising the price floor of the token and benefit all the holders. Also more share of the rewards function will be sent to burn wallet as this wallet grows bigger in size, effectively boosting the burn with every transaction.

These functions quickly dries up the supply to make the token scarce and increase the demand, resulting in the increase of value of the token and motivate more people to buy while retaining existing buyers.

# WHAT IS REWARDS

1% of every buy and sell transaction is redistributed to all wallets holding Lucky Shiba Inu (including the burn wallet) which increases the amount of tokens that you hold considerably. Each transaction will yield \$LSHIB automatically to every wallet holding Lucky Shiba Inu.

The amount of rewards received is based on the total supply of tokens that they hold.

## Example :

If Mary owns 1% of the total supply and someone buys 10,000,000 \$LSHIB, Mary will receive 1000 \$LSHIB tokens. Total reward amount for this transaction is 100,000 \$LSHIB and then we take 1% of this to find Mary's reflected amount ie. 1000 tokens just for holding \$LSHIB tokens, in one single trade that someone else did.

## WHAT EFFECT DOES IT HAVE?

This means just by having a balance of \$LSHIB, you automatically will gain an interest yield over time. It also encourages people to increase their holdings with more buys over time, as the interest yield is based on how much of the supply they own.

# WHAT IS BUYBACK

1% of every buy and sell will buyback tokens automatically which will increase the buy pressure and drive the price up.

When automatic buyback is enabled, whenever a sell is executed a portion of this buyback amount is used to automatically purchase tokens back from the liquidity pool. These purchased tokens are then immediately burned. However, the development team closely monitor this and can also opt to use it manually to prevent bots from artificially raising the price. This feature can be automatically trigger on each sell and can also be used manually to spike up the price of \$LSHIB.

## WHAT EFFECT DOES IT HAVE?

1. Since the bought back tokens are automatically burned, those tokens are removed from the supply forever and can never be sold in the future which effectively raises the price floor of \$LSHIB.
2. Because of the automatic buyback, investors will never see more than 2 sells in a row (95% of the time). This reduces panic sell and benefits all holders.
3. The buyback produces a large green candle and a spike up in price.
4. In manual mode the buyback can be used to neutralise the whale sale if any and raise the price floor.

1. Auto buyback can be switched to manual to strategically neutralise a heavy dip.
2. /buyback command can be used inside our Telegram channel to view total amount in the buyback wallet in manual mode.
3. Manual buyback will be done in stealth mode to avoid users taking undue advantage .

# WHAT IS LIQUIDITY

With each trade liquidity is increased making Lucky Shiba Inu progressively strong against sells and price swings, resulting in sustained value in your wallets. This makes Lucky Shiba Inu strong and less volatile.

This function automatically increases liquidity by taking a portion of each transaction and putting it towards the liquidity pool. It stores the taxed transactions inside the contract and at a swap threshold the contract will automatically take a portion of these stored tokens and sell half of them to the liquidity pool in return for BNB. It will then pair up the acquired BNB with the remaining half of the tokens that are left over, and deposit that into the liquidity pool.

## WHAT EFFECT DOES IT HAVE?

Having more liquidity means that swapping \$LSHIB in and out of the pool, swings the price less, effectively raising the price floor. This makes Lucky Shiba Inu progressively stronger against selling, resulting in your wallets retaining their value more effectively. It also makes Lucky Shiba Inu strong and less volatile.

# INITIAL TOKEN DISTRIBUTION

Lucky shiba inu minted one quadrillion tokens. Those are the tokens that will be ever minted.

**TOTAL SUPPLY - 1,000,000,000,000,000 (ONE QUADRILLION)**

**PRIVATE SALE - 8%**

Sold to whitelist investors for project initiation

**PRE SALE - 40%**

Pre-sale conducted in [pinksale.finance](https://pinksale.finance)

**LIQUIDITY - 25%**

Liquidity is locked for 1 year

**FUTURE DEVELOPMENT - 5% (Locked + Vested)**

2.5% - locked with [pinksale.finance](https://pinksale.finance) for 2 months

2.5% - vested with [pinksale.finance](https://pinksale.finance) and released in 6 Stages

**EXCHANGE LISTINGS - 5% (Locked + Vested)**

2.5% - locked with [pinksale.finance](https://pinksale.finance) for 2 months

2.5% - vested with [pinksale.finance](https://pinksale.finance) and released in 6 Stages

**AIRDROP - 2% (Vested)**

For contests, promotions and airdrops

**PERIODIC BURNED - 15% (Vested)**

Tokens burned in stages to boost hyper deflation

\*Contract prevents any further minting of tokens, so it's impossible for the supply to increase. But it can decrease rapidly due to Ultra Hyper-deflation.

# WHAT IS DUMP TAX

Whales dumping tokens creates uncertainty and can usually result in further panic sells from other investors looking to exit prematurely. To help alleviate this fear, we have built a mechanism called anti-pump and dump. It is a temporary tax bracket of 23%, imposed after a certain amount (currently set at 350 billion) of \$LSHIB has been sold in a 24 hour bracket. This is to make whales think twice before they decide to sell large proportions of the total supply that can consequently have a negative effect on price.

## WHEN DOES IT COME INTO EFFECT?

Our smart contract tracks the sell histories of each individual wallet within a 24-hour window. After a wallet has sold 350 billion \$LSHIB within this timeframe, we will subject that wallet to a 23% fee for the next 24-hours. This means if a whale decides to dump their entire bag, a lot more of the tokens get driven into the project to strengthen it.

## WHAT EFFECT DOES IT HAVE?

This forces everyone holding huge amounts of token to be reasonable at the same time responsible, not to paint the candle in red. The optimal way to sell off is in small proportions over time.

# HOW TO BUY ON PANCAKESWAP

## 1. DOWNLOAD WALLET

Download Metamask or Trust Wallet. Add Binance Smart Chain to your network-list.

## 2. BUY BNB

Buy BNB on an exchange (i.e. Binance, Coinbase etc.). Transfer the tokens to your wallet address.

## 3. GO TO PANCAKESWAP

Open Browser inside the app and navigate to [Pancakeswap.finance/swap](https://Pancakeswap.finance/swap)

## 4. SELECT LUCKY SHIBA INU

Click select currency and paste our contract address  
(0x972DD7c2f1c1D8B97DFbC177416e469646706588) and wait for few seconds to load.

## 5. SET CORRECT SLIPPAGE

Before swapping, click on settings and set slippage tolerance to 10% + for buy or 18% + for sell.

## 6. BUY LUCKY SHIBA INU

Enter the amount of Lucky Shiba Inu (\$LSHIB) you would like to buy and hit Swap.

## 7. CONFIRM TRANSACTION

Confirm the transaction in your wallet, if the transaction fails try again or try increase the slippage.

## FUTURE

# DEVELOPMENT & USE CASE

We will be developing numerous use cases for lucky shiba inu which adds value to the token. These will make our holders and investors to benefit from the added value and multiple streams of income. Lucky shiba inu will be the governance token for all the dApps listed below and the ones developed in the future.

### AIO dApp

dApp which combines the powers of decentralised applications with integrated wallet. All in one app where you can

1. Track your holding and view performance of your assets
2. Decentralised exchange where you can swap assets securely
3. Integrated wallet to hold app your assets
4. Referral module where you can track earnings from your referrals
5. Games and other dApps integrations.

All development will be made as separate and secure modules which will be integrated into one app. This approach enables future integrations to any dApps already available and extend its functionality, such as a cross chain swap integration in the future.

Though current plan is to develop this dApp as luckyshibainu exclusive we have plans to extend its use as white labelled service to existing crypto agencies and companies.

CONTINUED...

# DEVELOPMENT & USE CASE

## 2. RARE AND LIMITED NFT WITH USE CASE

With our rare and limited NFT collection you will be able take advantage of all the benefits it comes with. With the recent increase in the NFT market places, the rarity and usefulness of almost all NFTs has decreased. Value of most NFTs with no use case, drop down to practically zero. This won't be the case with Lucky Shiba Inu NFT's as its developed as a usecase by itself. When you step into our online blockchain casino with these NFTs you will have a huge advantage in all the games. From special discounts to lucky passes you are in for a surprise when you hold our NFTs in the casino.

## 3. ONLINE BLOCKCHAIN CASINO

As our community grows we will be developing an online blockchain casino gaming platform which will be one of its kind. You will be able to make use of your \$LSHIB token to play and win the games online. We will be first starting with most popular games that you love and add more to it.

All the updates and improvements on the usecases will be first communicated to our holders through our official Telegram Channel.

# Disclaimers

## General Disclaimer

The Whitepaper consists of information provided for discussion purposes only. All investment strategies and investments involve in high risk of loss.
