

Hello AND HAPPY NEW YEAR!

2021 was a great year for PEAKE, despite the Covid challenges the world is facing we were able to continue to increase our customer base, establish several very exciting new partnerships and launch two new service offerings.

For over 15 years PEAKE has been providing mission critical communications to first response agencies across the country and around the world. We sincerely appreciate your continued support and the opportunity to provide you with these crucial services over the years. It is our goal to provide our customers with services they trust and use and the faith that they can come to PEAKE with any challenges that arise.

As we step into this New Year, I wanted to reach out to you to not only express gratitude for your continued business but to also announce some exciting news and changes for PEAKE in 2022!

To start off, we have recently launched a new website that we are very excited about. It is a more streamlined and modern site that expresses PEAKE's history, capability, and vision. Please visit www.peake.com to check it out.

Perhaps most importantly, we are launching new communication services and solutions to provide our customers with better, broader services that fit your usage and budgets and enable you to use your existing communication assets more effectively without significant cost increases.

Over the course of the last 4 years there have been many changes in both satellite and cellular communications as it pertains to first response agencies. The team at PEAKE constantly monitors new technologies and keeps an eye on how they may benefit our customers and allow them to better execute their mission. Our goal is to always provide our customers with the best possible solutions for their complex and changing needs. There are not always one-size fits all service plans and so in 2022 we are launching several unique options for connectivity services and partnering with state-of-the-art technology companies that are on the forefront of mission critical communications.

These plans include our new Tactical IP CONNECT satellite service. Built with First Response customers in mind, Tactical IP CONNECT provides the fastest and most secure satellite connection in the industry. We are also excited about our new partnership with Dejero and our ability to now provide Blended Connectivity options to our customers. This technology blends multiple connection points (satellite, cellular, FirstNET, wifi, broadband, etc) and creates one large 'pipe' of connectivity. PEAKE has uniquely built service plans that combine both satellite and blended connectivity to give our customers options that they will use with every deployment.

I encourage you to take a look at our new website and to reach out with any questions you have about our new services and solutions. As an integration company it is our goal to provide you with solutions you will use routinely and we have worked hard to develop a line of services that not only provide customers with better service but much of the time, at a lower cost.

As technology and mission critical communications continue to progress, it is our promise that we will continue to progress with it- this will allow us to provide you with the best solutions for your needs, usage and budget.

Thank you for your time. We sincerely appreciate your business and more importantly all that you do day in and day out. Please reach out to me to discuss our new service offerings and how better we can serve you.

Regards,
Steve Morgan
