

SOLVE YOUR IOT CHALLENGES WITH A COMPLETE EDGE AS A SERVICE SOLUTION

Published on June 7, 2022

Hivecell, the Edge-as-a-Service company, and weeve, the edge IoT platform, have announced today a partnership that will enable enterprises to make full use of Edge IoT solutions.

Under the partnership, customers have a complete software as a service (SaaS) solution for IoT that runs on premise, at the edge. No capital expense, no complex hardware installations and maintenance. Just the software you want, where you want it. weeve brings a complete IoT data orchestration platform to transform complex, fragmented, and private IoT data into clean and actionable insights. With a full library of pre-coded modules, weeve is the perfect solution builder for IoT edge applications. The Hivecell edge platform as a service makes deploying, monitoring and managing weeve solutions look and act like Cloud, even though they are running on premise at hundreds or even thousands of locations.

By 2025, 24.6 billion devices are expected to be connected worldwide and the number continues to grow. This growth comes with a great deal of challenges. IoT pilot projects are relatively simple, but deploying use-cases at scale, at hundreds or thousands of locations, is complex and time consuming. These projects require not only great domain knowledge but also solid digital expertise, as most IoT projects rely on smart hardware and infrastructure. It is crucial for enterprises to utilize partnerships that can fulfill all of these aspects when it comes to offering out-of-the-box IoT solutions.

“It is our ultimate goal to be the undisputed subject-matter expert (SME) in our field of business, with a great variety of horizontal solutions that address the complexity of running on IoT Edge applications across multiple industries” Michael Bommer, Founder & CEO.

“Software as a service made enterprise applications much easier for all of us. Unfortunately, not every application can run in the cloud. This is especially true for processing IoT data,” stated Jeffrey Ricker, CEO of Hivecell. “Hivecell and weeve together provide customers the ease of SaaS on premise, at the edge, as they solve their pressing IoT challenges.”

If you would like to know how our joint offering of Hivecell and weeve can benefit your business, please send us an email to: info@weeve.network

About weeve

weeve is a high-tech IoT startup that empowers companies to generate value from their connected assets to weeve’s platform through data-driven services. The platform offers an intuitive way to create and customize data pipelines and processes using a simple drag and drop method on the edge, with a library of ready-made modules built around common use cases. weeve’s solution reduces the time needed to generate ROI from customers’ IoT projects, and delivers key business insights that can help companies optimize processes, reduce costs, improve decision making, and create new revenue streams.

About Hivecell

Hivecell is the Edge-as-a-Service company redefining the category of edge computing with easy-to-deploy, future-proofed, technology agnostic solutions empowering companies to scale infinitely and save massive amounts of resources in their management and processing of big data. It takes compute power out of the data center and places it at the true edge, enabling companies to efficiently manage thousands of remote locations without the use of a huge IT team and at 50 percent of the cost of traditional cloud providers.
