

UI Developer who can help us in our frontend department, making a difference in the world (Aalborg)

XCI is a Danish software company proudly serving government customers around the world in the fight against crime and terrorism. Cyber security, artificial intelligence and big data are key technologies of expertise.

Our off-the-shelf software products provide unprecedented insights from the growing amounts of IP-communications data, empowering users to easily ask questions and get answers from data, thus making it actionable.

We founded XCI in 2017 to serve intelligence and law enforcement agencies, helping them efficiently investigate past and future threats from the rapidly growing amounts of data and protocol complexity. This requires a new, machine-assisted, data-driven approach. To solve the complex problems, we combine a deep understanding of communications data with cutting edge IP-probe technology, artificial intelligence and analytics.

With a combined industry experience of 400+ years, XCI's team of more than 25 engineers are obsessively focused on delivering world class solutions that at any line-rate keep up with the ways adversaries use communications technology, thus helping our customers do their most important work today and in the future.

We are very passionate about our products – always being ahead and aiming to be on the frontier in our business area where we develop software that makes a real difference in the fight against cybercrime and terrorism. We deliver mission critical software to customers around the world.

The job in a nutshell

We are looking for a dedicated team player for our frontend department. Creating rock solid and easy to use software is key to us. We are developing our frontend using ReactJS, JavaScript (ES6), Node.js, Elastic Search etc.

If this sounds good to you – then we offer an exciting fulltime job in a casual, collaborative, fast-paced team of highly experienced developers where setting your own goals is part of the job.

You will become a part of a very enthusiastic and experienced team of colleagues.

Who are you, then?

You are looking for a job where you will play a role in making a difference in the world. You are eager to learn. You have a flair for visual design and the ability to make data speak through intuitive and interactive visualizations.

You must be fluent in English. You must care about making clean, easy to read code. You have quality awareness regarding your code and structure. You are keen on finding the best solution to the task at hand – while having simplicity in mind. You find working with big data flows interesting and you are experienced in using Elasticsearch.

You are skilled in JavaScript/ReactJS and understand lifecycles in code.

Your personality, and the way you address a task, is as important to us as your skills and experience.

Minimum 3 years of relevant work experience is a requirement.

Tech areas:

- ReactJS
 - o State Management
 - o Lifecycle Management
 - o Props Usage
- JavaScript (ES6)
- JSON
- Elasticsearch
- Node.js
- Experience from other JavaScript frameworks (ReactJS is preferred)
- Knowledge of HTML5 and SASS, CSS

You will become part of a dedicated, high-calibre software development team who will provide an inspiring, international environment in which to do your best work. We love rapid prototyping as much as we love getting the job done.

Application

We look forward to hearing from you – if you have any questions or need further information about the position, please contact HR Manager Anna Larsen +45 22327232, mail anna.larsen@xci.dk
