

MultiSwap Whitepaper

The Idea

A cross chain DEX designed to overstep boundarys and create working foundations that bridge together different blockchains and provide an ecosystem for easy access between platforms – Furthermore we are incorporating FIAT into this to allow easy access between the crypto and FIAT systems, without centralised exchanges and / or brokers. The ultimate goal being stability and easy access for the average consumer.

Our Mission

A DEX Platform allowing easy access to the average consumer by implementing FIAT into the process, without the need of a centralised Exchange – ever wanted to hit an ETH launch but couldn't be bothered with the long process of sending funds to multiple wallets in order to exchange your bsc tokens into bnb, send to your desired exchange – and then to your desired launch, we save that lengthy process by directly routing the tokens through fiat – thus connecting the FIAT and cryptocurrency systems together.

Unique Features

We will include premium features on our DEX that will give investors and extra incentive to HODL:

- Sniper Bot (In DEX)
- Faster Transactions (For long term holders)
- Promotional Giveaways (e.g – Metaverse Items, Nfts, etc..)
- 1/1 Nfts
- Fastest alerts on new tokens

Tokenomics

A supply of 1 Trillion \$MSWAP

Which include taxes of 10%:

- 5% Development
- 2.5% Liquidity
- 2.5% Marketing Wallet

Our 1 Trillion supply will consist of:

- 2.5% Private Sale (25% released at launch with the rest locked and vested for 3 months with a gradual release of 25% a month)
- 5% Presale (max buy : 3 bnb)
- 2.5% Team (locked for 6 months then released at a rate of 10% over 12 months)
- 10% Liquidity (locked every 2 months between BUSD/BNB)
- 10% Held Back for long term staking plan.
- 65% Public

Use Case

With our ecosystem in place we plan to use \$MSWAP as the native token for gas fees on our DEX, Any transfer between tokens and blockchains will require \$MSWAP to pay and confirm the transaction, thus in turn creating a deflationary token and creating a huge incentive to hold.

We aim to be the Go-To DEX for defi and metaverse services, helping the process of mass adoption along the way.

Roadmap

● Q1

- Token Private Sale / Presale / Launch
- Building a solid community
- Building partnerships

● Q2

- Start of app development
- Expansion of token (lower tier exchanges)
- Contract Audit
- Listing on CoinGecko and CoinMarketCap

● Q3

- Expansion of Dev Team
- Enhanced Marketing

● Q4

- Beta Release
