Introduction

SENT Galaxy represents a change in the cryptocurrency platform landscape. We aim to change the status quo around how users interact and engage with the cryptocurrencies they both own and wish to own. Centralised crypto brokerages can no longer be trusted, and the crypto ecosystem must move into a decentralised landscape for the continued growth and trust in the sector. Protocols are open to everyone, and so is SENT Galaxy. Buy crypto, store it, swap it, and analyse data around it - all in one easy to use platform.

2. Existing Work

Trade The Chain

Trade The Chain is a global community of crypto traders and enthusiasts, all using an institutional-grade market and sentiment data platform. In addition to instant, hourly, daily, and monthly sentiment metrics, Trade The Chain comes with a wide variety of market data, alerts, and charting tools to tackle crypto from all angles. Members take advantage of all these trading signals, as well as unique trading insights and research delivered daily, along with conversation and analysis from our members every minute of every day.

You can learn more about Trade The Chain at <https://www.tradethechain.com>

Partnerships

Trade The Chain is proud to be integrated into SENT Galaxy.

SENT Galaxy is honoured to work with the following partners: The Tie, Changelly, FMFW.io

3. Features

3.1 Multi-chain storage

SENT Galaxy offers storage for assets across six different crypto networks, with more to come in the future. Customers are able to store, send, and receive assets across the Bitcoin, Ethereum, Polygon, Solana, BSC, and Bitcoin Cash networks with more blockchain integrations coming. Customers should note that you will only have an identical address for the Ethereum and Polygon networks. The other networks will have unique addresses for your wallet in SENT Galaxy, so please double check your wallet addresses before sending and requesting crypto from third parties.

3.2 DEX Liquidity Aggregation

SENT Galaxy offers trading through 1INCH.io, which offers robust liquidity aggregation through tens of sources across the entire crypto ecosystem. You are always guaranteed to get the best price for your trade based on several components in the 1INCH trading software. Clicking the slider on the top right allows you to configure between “maximum return” or “lowest gas cost”. You may also change the slippage tolerance as well as choose your specific liquidity sources you would like to engage with in this setting. You may also see your entire trade history by clicking the clock icon in the top right corner.

3.3 Cross-chain

Through Changelly, SENT Galaxy offers cross-chain swaps across Bitcoin, Ethereum, and Solana. Customers can swap networks in one transaction in less than an hour with ease for a single low fee. As swapping across networks can take time we recommend waiting up to an hour for your transaction to complete.

3.4 Fiat to crypto on-ramp

SENT Galaxy offers fiat to crypto on-ramp through Wert.io. Wert.io is available in over 200 countries and the majority of U.S. residents. To see a full list of countries and states please visit the following link: <https://widget.wert.io/supported-countries>. To purchase cryptocurrency via Wert.io on SENT Galaxy you must have your ID and personal information ready for KYC/AML verification. This process is done with Wert.io as SENT Galaxy does not capture or store any user information.

3.5 Trade The Chain market and sentiment data

SENT Galaxy has built in Bitcoin and Ethereum sentiment data available to all users. SENT Galaxy also has a full integration with Trade The Chain to offer members full access to Trade The Chain's sentiment and market data across hundreds of cryptocurrencies. Paying Trade The Chain members are able to see the full array of Trade The Chain market and sentiment data that is available in the web app, including hourly/daily sentiment and charting tools.

3.6 Military-grade security

For sensitive data encryption, we use the EncryptedSharedPreference. ESP is using AES256 to encrypt/decrypt data on-the-fly which has been adopted widely in the industry.

4. SENT Token Rewards Program

More information will be provided about the SENT Token Rewards program in the future. SENT holders can expect to receive reduced trading fees and additional special perks with participating Partners for holding specific amounts of SENT tokens on SENT Galaxy.

The SENT Token whitepaper will be released in the coming weeks.

5. Summary

The goal of SENT Galaxy is to revolutionise the cryptocurrency industry from a decentralised-first perspective. Gone are the days of centralised brokerages risking it all with your capital. Here are the days of managing your own capital and receiving the most accurate data in regards to your capital - all in one place. SENT Galaxy solves your needs in the cryptocurrency industry through military-grade security, fiat on-ramps, decentralised trading, cross-chain swapping, and multi-chain storage.

Everything you need at your fingertips in one location.
