How to spend Angel money **efficiently** without having deep technical knowledge or technical skills

So you’ve paid 100k to deliver your MVP, and it turns out it works. It usually has a frontend, backend, and database and runs in AWS.

What did you receive? Are you in charge of what you received?

1. Are the vendors working on your application or are they billing you hours?
2. Are there any hidden costs besides the actual development I don’t understand?
3. Are you married to the first vendor of your application?
4. Will the application scale efficiently and automatically?

How someone else solved that with us!

- It took a developer to fully migrate the existing solution consisting of Frontend, Backend, and Database to CodeNOW infrastructure 1 week.
- Based on the financial books and 12-months collaboration, savings are as follows:
What they say about us:

We saved them **devops guy salary** (up to 300k usd/year) - down by 80% spent on DevOps costs with team.

**Poetizer**

"I got my application delivered in no time"

Set up a **DEMO** so we can discuss!
