## Note from the founder:

A ZUPER SUPER HELLO TO LEARNERS ACROSS THE GLOBE, We can't express our excitement at having you onboard as part of our Zuperly Community! Even though we have just started, but the love and interest we have received from you all as you've signed up for early access to our Products have only made the goal of our movement

stronger than ever!! At the core level, we at Zuperly believe in building an interactive circle of like-minded people whom we ensure that when brought together and given the space to work towards productivity will directly shoot for the stars!! Ours is no rocket science, just giving you the space to grow, explore and progress into a lifetime of learning with us! And how do we do it?

Well, it's simple. We have ZUPER TOOLS for you, especially customized and well researched from reliable sources. Everything you need to develop into your ambitions is available in our digital library! In addition that, we would like to offer this e-book as a token of our love and regard for the faith you have shown in us! We promise to always provide you with the best content and resources. Your aspirations, Your ambitions, Your learning is OUR ultimate goal.

Best,  
Kapil Reddy

# What is personalized learning?

Hi, learners! Is the syllabus your school or college is following getting too hectic for you?

Well, We thought you might be feeling that way which is why we wanna tell you about personalized learning! Sounds somewhat like that personalized playlist you get on Spotify, right?

You are kind of on the right path of guessing what Personalized learning is. Let me elaborate on it a bit for you.

Not all learners have the same capacity of understanding a concept or learning things in the same span of time as others. What schools and colleges forget is that everyone takes their own time to grasp a lesson.

Personalized learning is a more understandable approach to teach students. Students are evaluated on their interests and skills so that a learning plan can be devised to help them learn better. Guys, everyone is competing, and it's a hard space for you to excel when you are not being able to make learning a fun process.

Personalized learning helps remove the stigma attached to special learning for children who are a bit weak in certain sections of the syllabus. But how do these techniques work? Let's read!

# How is personalized learning different?

---

To have a brief understanding of how personalized learning is different from the basic learning techniques used, let me give you an example. Suppose you walk into a store to buy a piece of clothing for yourself. You know your size, based on past experiences and measurements that you took before coming to the store.

But as soon as you enter you see that only one size is available for everyone. There are no variations and no way in which you can alter the outfit. You are being forced to wear a piece of clothing that is not your size and you are not comfortable in.

Now imagine the same thing happening to you in school. Exactly! It is bizarre! There is a fixed syllabus that you and your friends have to follow. It doesn't matter if you take a lot more time solving a math problem than your best friend, you have to try and finish it at the same pace.

This is what personalized learning techniques will change. It will devise a plan according to your capacities, likings, skills and help you grow. After all, a plant needs the right amount of sunshine, water, and love to grow into a big tree!

Want to know how these techniques work? Read on!

# How do personalized learning techniques work?

Guys! Everything sounds exciting, right? Well, it only gets better! Personalized learning employs so many different methods to engage a student and help them. How? Let's walk you through it.

You might be acquainted with report cards. They keep a track of your past assessment marks, new ones and give you an evaluation. This is a common process, very simple? Ain't it?

Something similar is used by schools and colleges to keep a record of all the skills, needs. Motivations and goals. These are called learner profiles!

Yes, they are like Facebook profiles, except there are not so many interesting memes to share! Haha! But it's definitely cooler to understand and learn things better.

A second technique is your educational institution curating a personalized learning program for you to excel in. These learning paths can be very useful and help you achieve your goals faster!

A third technique is also employed. In this, the students are asked to give regular assessments. These assessments help the teachers understand how much progress the learner is making and what might help them in a subject.

The last and fourth method is having an open classroom space. Classrooms can be transformed to make the space that is flexible. A flexible learning environment can help students evolve and explore the space. Spaces can be mind openers, help build free-thinking learners who are comfortable. Sounds super cool, right? But how many people are actually using it?

# The good news in the making!

While it sounds like a fun approach, to begin with, there is a small twist to it.

Learners, personalized learning is very useful indeed. But often institutes do not like implementing them as teachers need more training to do this and it can be time-consuming.

But hey, we have good news too! Slowly different places have started to adopt personalized learning techniques to teach learners like you. It will help you balance out your weaknesses and strong points while making the process of learning super interesting!

Zuperly creates learning paths for students and implements personalized learning to help you get quality education effectively.

Is there any more reason to wait? Learn Superly with Zuperly!
