

Learning Ecosystems

Note from the founder:

A ZUPER SUPER HELLO TO LEARNERS ACROSS THE GLOBE,

We can't express our excitement at having you on-board as part of our Zuperly Community! Even though we have just started, but the love and interest we have received from you all as you've signed up for early access to our Products has only made the goal of our movement stronger than ever!!

At the core level, we at Zuperly believe in building an interactive circle of like-minded people whom we ensure that when brought together and given the space to work towards productivity will directly shoot for the stars!!

Ours is no rocket science, just giving you the space to grow, explore and progress into a lifetime of learning with us! And how do we do it? Well, it's simple.

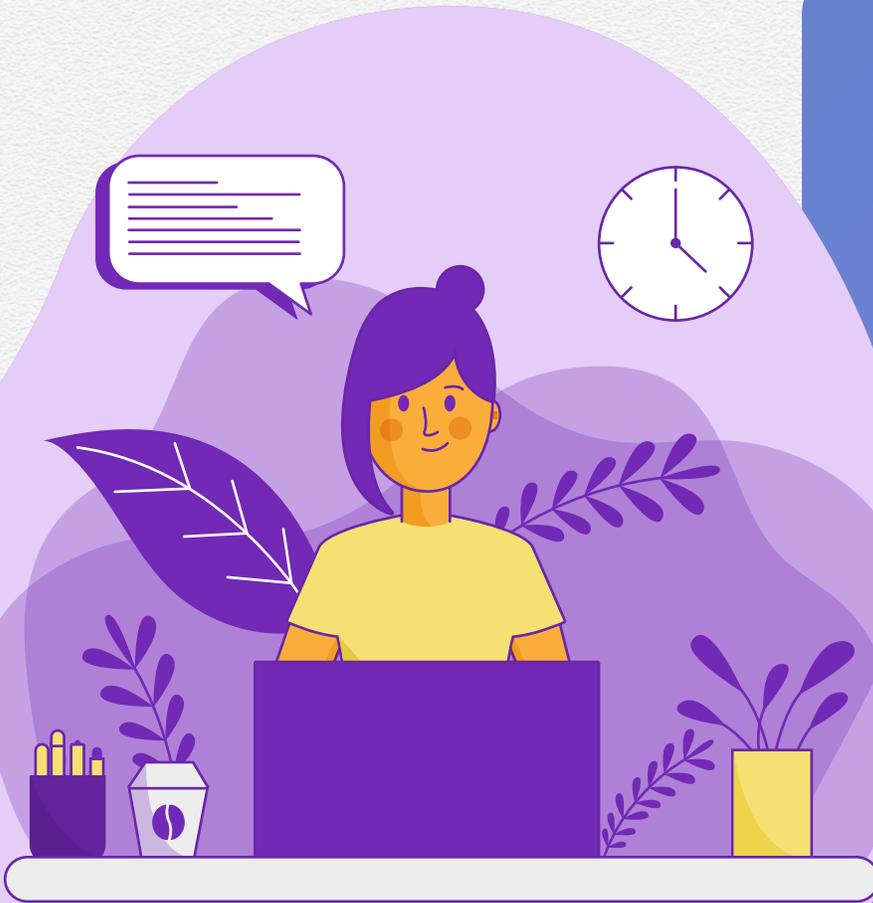

We have ZUPER TOOLS for you, especially customised and well researched from reliable sources. Everything you need to develop into your ambitions is available in our digital library!

In addition that, we would like to offer this e-book as a token of our love and regard for the faith you have shown in us!

We promise to always provide you with the best of content and resources. Your aspirations, Your ambitions, Your learning is OUR ultimate goal. :)

Best,
Kapil Reddy
CEO & Founder,
Zuperly

Introduction (Learning Ecosystem)

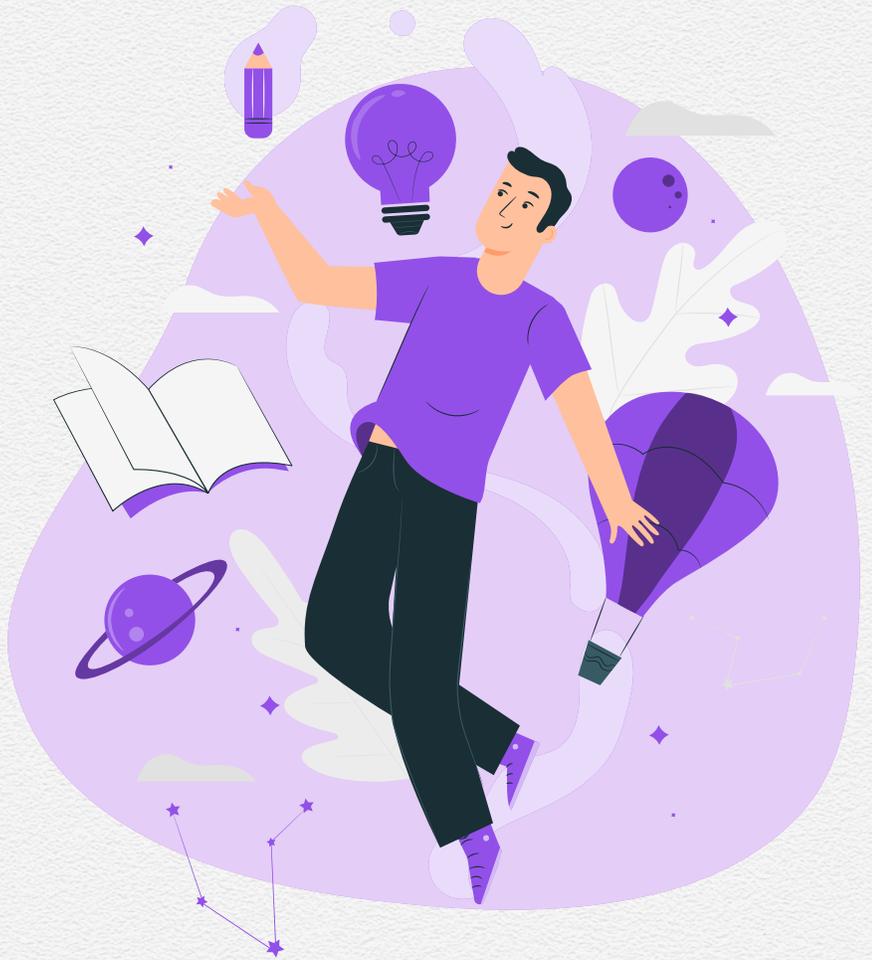

Hola learners! You all must be acquainted with this trendy term coming up these days called the “learning ecosystem”, especially in terms of productive learning and development circles.

To tell you simply, learning ecosystem is an idea that helps organizations in widely enhancing their leaders and learners: evoking strategic thinking about things in their training and helping them achieve goals they’ve set for themselves! It is kind of like a space full of determination too, if you ask us.

You are probably thinking that all of us know ecosystems as residences of the wild. You are right, but this is different! It's important for you to understand what a learning ecosystem is if you want it to work for you! Here, it's a system of people, content, technology, culture and strategy, existing both within and outside of an organization.

Consider the learning ecosystem to be the combination of tools and solutions used to deliver, manage, and track your digital training programs. An environment that will permit learners to immerse themselves in multiple outlets for educational engagements and purposes.

Sounds interesting, doesn't it? Keep reading to know more then.

Space full of determination

Productive Learning

Enhancing Leaders and Learners

Helps to achieve self goal.

Evokes Strategic Learning

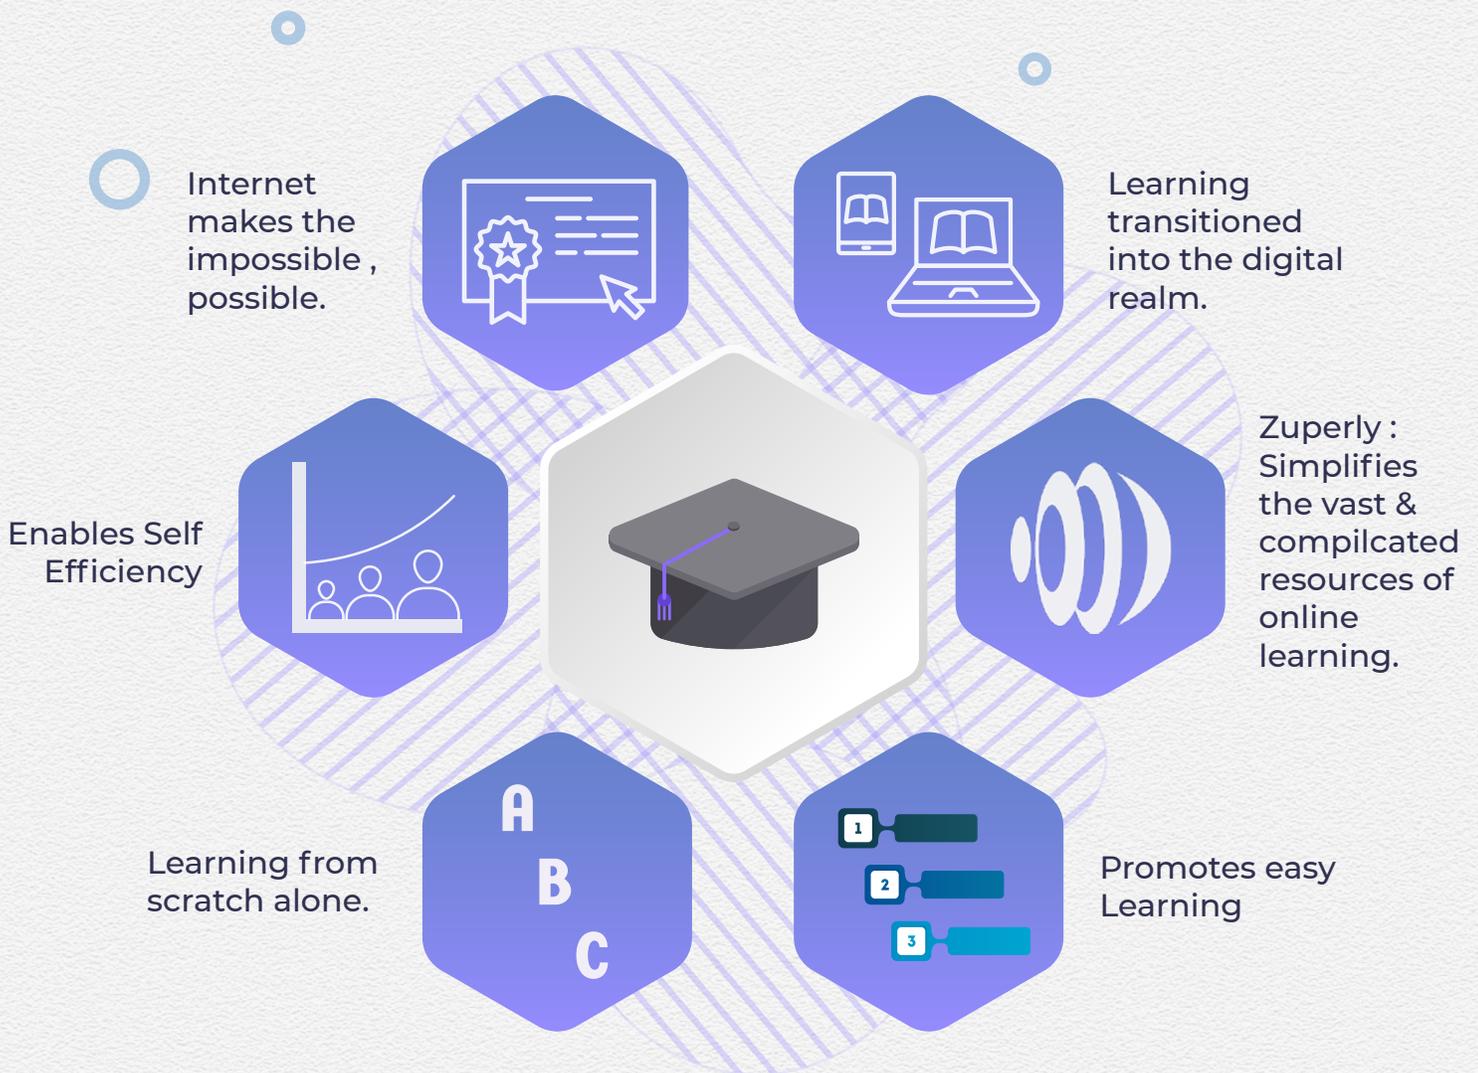

Changing and bettering learning ecosystems today, including the new in the old.

Let's begin by playing a game, 'What are the words that you would associate with Technological revolution?' More often your answers would be centered around 'ease of living', 'evolving', etc.; but technology has limitless possibilities!!! One such possibility is the creation of a network that binds people and unites them. Technology, culture, content, strategy, and so on, that has impacted the formal as well as the informal learning outcomes or results in a company/organization.

Well, one can categorize the learning ecosystem into 2 models: as traditional or the old model and new or modern model; while the former model was dominated by closed-source solutions Learning Management System (LMS), as such it did not allow plugins or other software to connect thereby limiting customization choices. I know, it's sad!!

The good news though is- when educators used this system they often struggled to develop a platform that would best adhere to the needs of the future. And hence the need for a BRAND NEW Model which tries to overcome these faults and modifies them in such a way that it utilizes open-source LMS. Obviously, this way educators who use this model can develop the very best learning programs that align with their budgetary constraints while meeting the requirements efficiently.

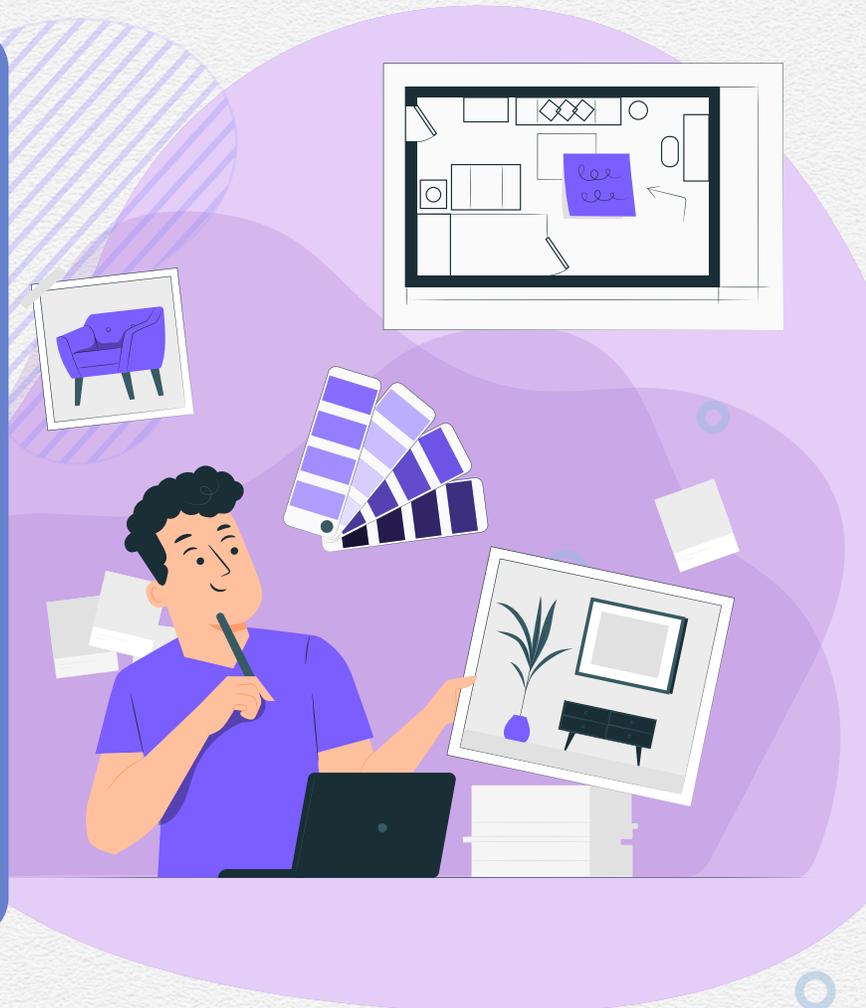

Thus, we see that to maximize learning, understanding gaps and understanding the needs of the future learner are crucial and should be included in the learning ecosystem.

Digital Learning : A Reform in the Norm

Now, speaking of this hyped up learning ecosystem that will change the course of the history of learning we must know which tools are crucial to giving maximum benefit to the learner! How else would we succeed?

It is necessary to be presented with the right kind of information that respects the investment of a learner's time and energy. Something that is inspiring and engaging at the same time.

In today's day and age, one of the most trans-formative aspects that has added itself to learning technology – is the Digital mode of Learning. It is method that exists virtually but has fruitful mental outcomes!

If you are thinking about popular videos and random answers to questions on the internet then no, that is not what we are referring to.

Digital learning has far evolved from those simple google searches and is now concretized to modules and series of lectures on various topics. You see the goal of ed-tech is to consolidate beneficial information while sourcing it from reliable websites, and that my friend, is what Digital learning has become today.

Not only is it an efficient and time-saving strategy, it is also more user-friendly and easily accessible for those of us who want to make a shift from the old-school textbook culture.

Concretized modules and series of lectures on various topics.

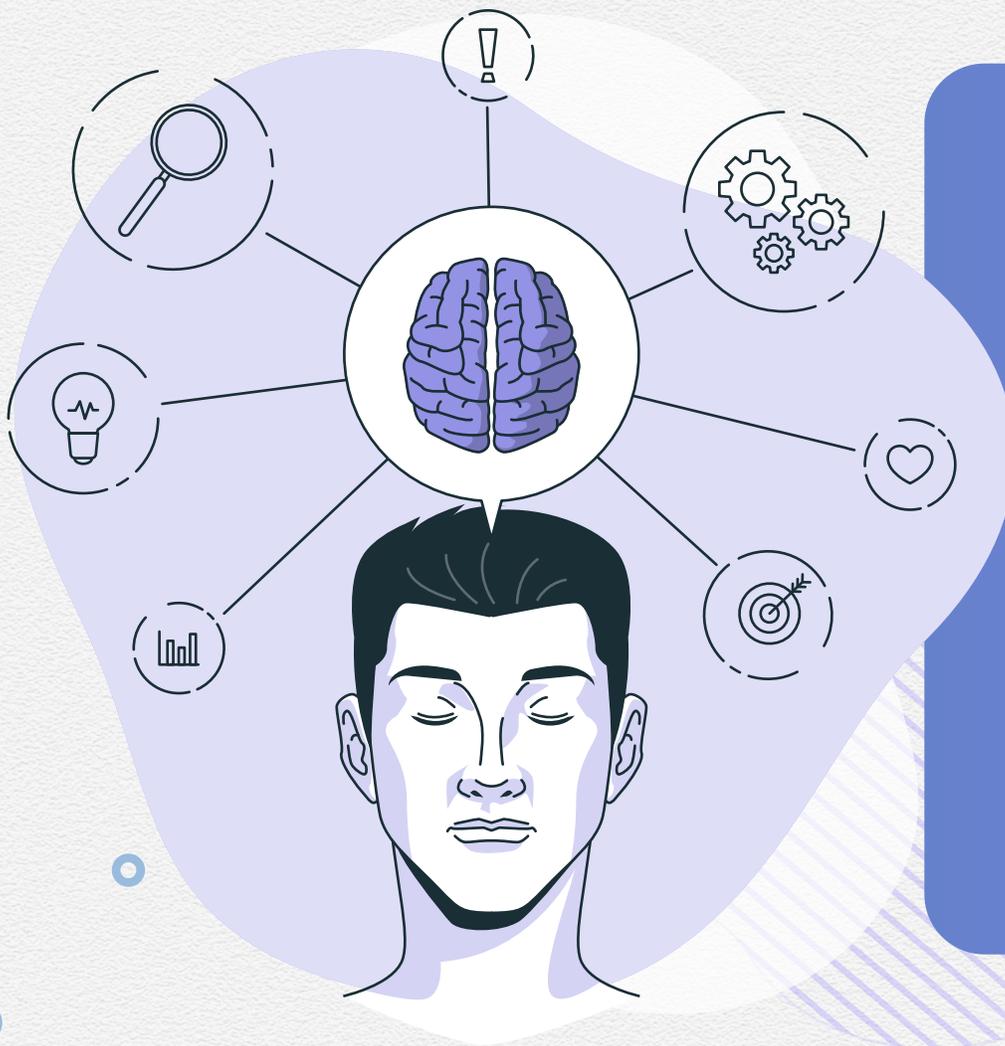

Efficiency and time management.

User friendly and ease of accessibility.

Contextualized and Personalized.

Digital learning allows all types of learners from students to successful people to find plenty of information that is well contextualized and personalized thereby ensuring that the primary goal and need of learning something new is fulfilled for them.

E-Learning is the Future

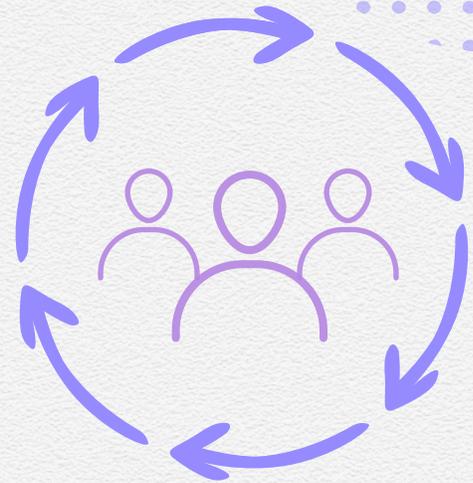

It's the year 2021. The future isn't coming - it's already here. What does learning look like in the future present? The Internet is the heart of the world we live in today. Learning, hence, is also transitioning into the digital realm.

The online universe is an interesting place for learning to transform itself! Ah what, are you surprised? Don't be! It's absolutely possible. With the endless tools at its disposal, e-learning has become a revolution in itself.

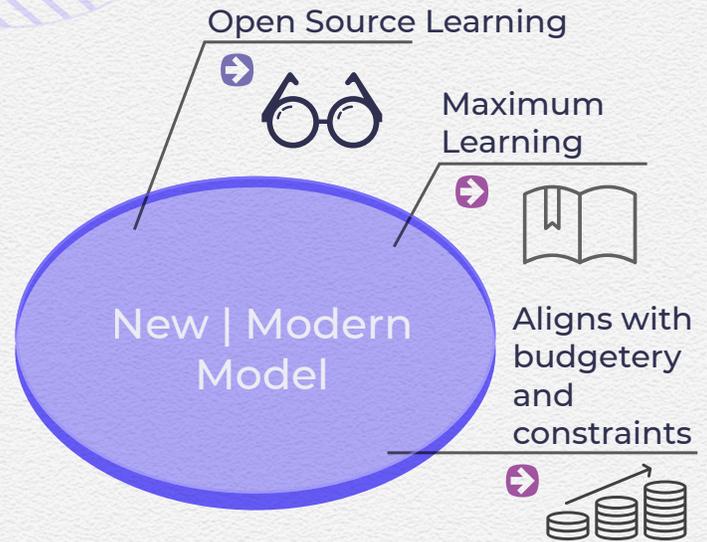

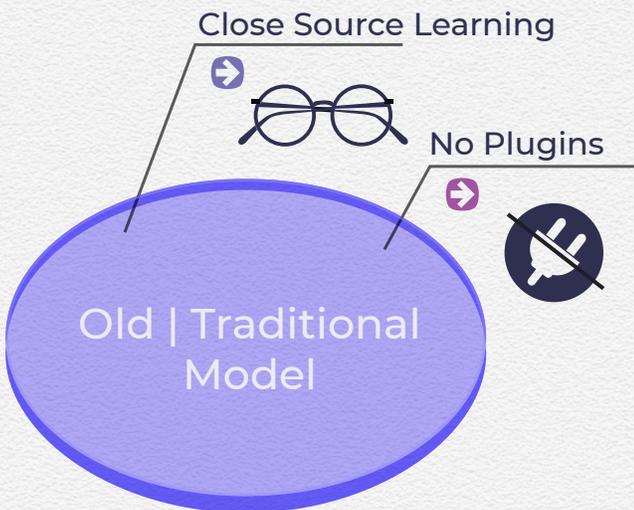

At Zuperly, we recognize this booming learning ecosystem, the need to construct it and amplify it- in fact, we host it!! Our platform simplifies the vast and complicated resources of this online education system.

One of the biggest pain points of learning anything online is having to do it alone and from scratch, but with our modules and ebooks, we ensure that we have you covered.

What we enable you to achieve is more efficient and easier learning - we do the hard work and leave the smart work to you.

LEARNING ECOSYSTEM MODELS

One of the biggest gifts of the internet is that it makes the otherwise impossible possible!!
