Exchange

Next Gen Decentralized AMM for Stableswaps on Metis

Simple, smooth, ultra-low slippage protocol

To consume with a dip

The Hummus Exchange protocol

The Hummus Exchange protocol is a single-side and decentralized AMM designed for exchanging stable cryptocurrencies on the Metis blockchain.

Hummus Exchange vs older generations of AMM

- Elimination of impermanent loss risk for liquidity providers
- Single-sided liquidity provision
- Ultra-low slippage for traders
- Capital efficiency
- Easy scalability of liquidity pools with new tokens

hummus

METIS

Data feeds:

Partnership with DIA as oracle

DIA

A Flexible Pool Architecture

Single-sided Token Provisioning

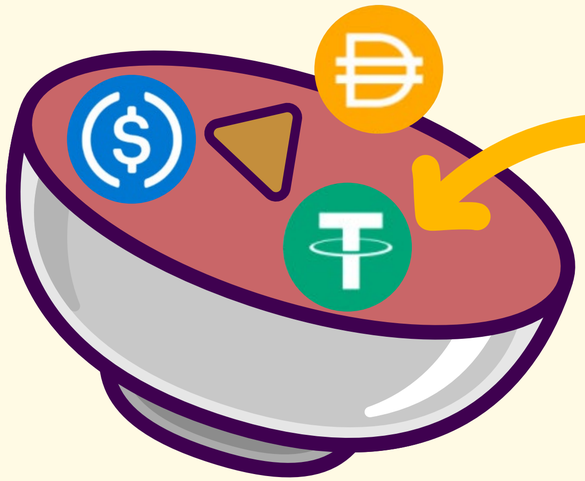
Liquidity Provider

Single-sided stablecoin deposit

Proof of the exact amount of stablecoins deposited

At withdrawal time, the liquidity provider will receive back the exact same amount of tokens deposited

Flexible Liquidity Pool



Easy scalability

Add new tokens without compromising any of the architecture advantages

Capital efficiency

- No traditional pairing of tokens: The liquidities of identical tokens are compounded to form each a single uniform liquidity unit
- Less liquidity fragmentation = ultra-low slippage rate when trading
