Market Overview

The introduction of blockchain and its capabilities aimed to revolutionize the traditional finance system. The traditional system has become increasingly centralized and inequitable, with banks and financial institutions controlling the market. Blockchain, and its derivatives, advocate a community-oriented Decentralized Finance (DeFi) approach, leveraging blockchain's innovative technology to overcome some of the challenges facing the traditional system. Some of these issues include near-zero interest rates, high fees, currency exchange rate fluctuations, and a bad overall banking experience. As we have seen with the rise of modern global conglomerates, when power shifts into the hands of the few, it is generally detrimental to the general public. Capitalists use the anti-competitive advantage that comes with centralization and lower levels of competition to raise prices and boost profits. The same is true of the financial system. As such, traditional banking methods are gradually becoming outmoded as consumers aim to regain financial control.

One of the unique features of blockchain is that it offers a decentralized finance option. DeFi is described as the exchange of financial transactions and services between participants utilizing digital currency (or tokens). Investment transactions, insurance services, loans, and payment services, for example, all rely on the DeFi platform, which is built on strong token technology. On a higher level, DeFi is a platform where everyone may access financial goods through an open, public, decentralized blockchain network. It eliminates the need for an intermediary, such as banks or brokerages, and the associated additional costs.

Many projects, innumerable nodes, and decentralized autonomous organization (DAO)/rebase protocols have surfaced as new opportunities in the DeFi arena, but they have all witnessed setbacks. Alongside this, there are massive treasuries that do not invest to their full capacity and die a protracted death as a result of inflation and an unsustainable model. However, there will always be caveats and negatives when a new technology or sector is being established. Following failures in this field, teams are scrambling to strike the ideal balance of high-yield and long-term viability. Servertech has studied the shortcomings of prior models and is delighted to present the world's first self-sustaining, long-term passive revenue protocol. A safe platform where users can park their capital and be confident that they will have steady, sustainable income for years to come.

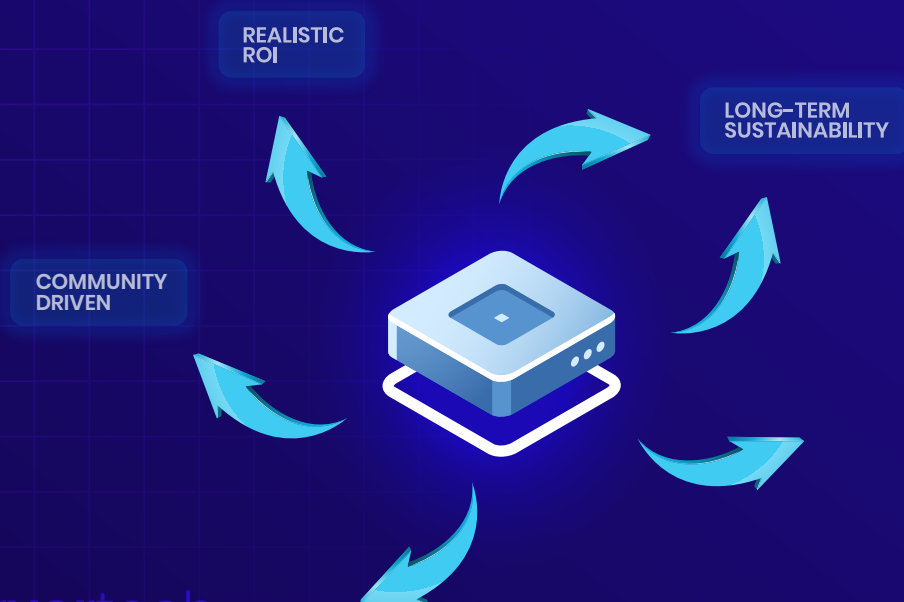

Servertech: The Big Picture

Servertech is a protocol that makes it possible to invest in DeFi projects across many chains. Built on the AVAX network — due to its low costs and rapid transaction times — our goal is to make DeFi as a service (DaaS) accessible to everyone. Transparency and the dedication of community members will set Servertech apart from other protocols in the industry. We aim to become one of the leading DaaS companies by providing constant, high-yield income to our members.

Servertech aspires to produce realistic ROIs, long-term sustainability, and a community-driven system that generates passive income through diverse and publicly distributed assets. To better serve members, Servertech recognizes the necessity of reducing or eliminating selling pressure, which it wants to achieve by providing more use for its tokens and protocol. As the Servertech network grows, the team hopes to develop additional utility and will dedicate the funding needed to achieve this.

The ecosystem's financial strength is well-balanced, consistently strengthened, and backed by algorithm expertise. The buying power and reward scheme encourage members to accrue their rewards for more than 21 days before claiming their income. This enables Servertech's algorithm to safely project itself over a lengthy time horizon. With members more likely to hold onto their tokens, this should allow the price of \$STK to climb.

The team has been KYC verified by AssureDeFi™, a platform focused on providing a suite of unbiased informational resources <https://www.assuredefi.io/projects/servertech/>. The team intends to have the project audited as soon as possible to foster confidence and safeguard the platform's security for its users and is currently evaluating the best candidates.

Servers: Build Once, Earn for Life

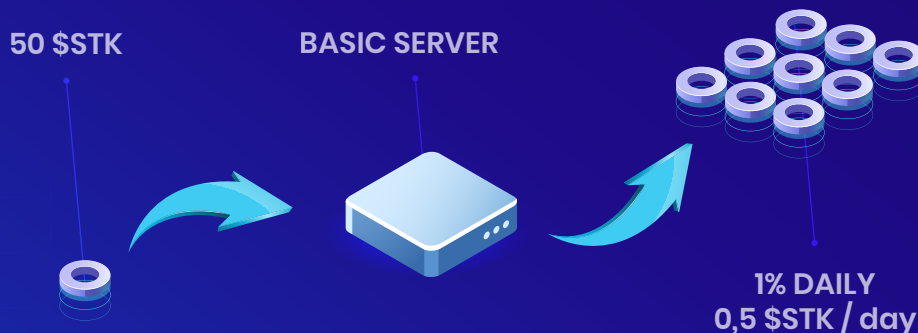

Servertech is a platform that acts as a link between each user-built server and the company's growing team of financial trading experts. Member servers are typically used as a passive revenue source because they consistently deliver a stable ROI.

Servers generate a certain amount of \$STK on a daily basis. In the Servertech community, there are three different server categories, each with its own investment requirements and rewards. When members purchase the project's cryptocurrency (\$STK), they can build their choice of server and claim the accompanying return, generating ongoing daily passive income.

An endless source of online income: Earn up to 5% ROI daily, up to 1825% Annual Percentage Yield (APY)

1. BASIC SERVER

To build this server, 50 \$STK is required. The daily ROI is 1% : 0.5 \$STK / day.

2. PREMIUM SERVER

80 \$STK is required to create this server. The daily ROI is 2.5% : 2 \$STK / day.

3. MASTER SERVER

It takes **100 \$STK** to build this server. The daily ROI is 5% : 5 \$STK / day.

Diamond Hand Bonus

Members that allow their daily income to accrue for the first 21 days — without making a withdrawal — will be awarded the Diamond Hand Bonus. This bonus reward allows members to cash out their income and initial investment at any time after the first 21 days while retaining ownership of their server. This means that they will continue to earn passive income from the server for life, with no further investment required.

Additional 1% Reward

If instead of liquidating your initial investment after 21 days members choose to use the funds to build another server, they will receive an additional 1% reward on top of the standard reward, as outlined below:

Type	Re-investment required	Daily ROI (incl. additional 1%)	Reward
Basic Booster	50 \$STK	2%	1 \$STK (Instead of 0.5 \$STK)
Premium Booster	80 \$STK	3.50%	2.8 \$STK (Instead of 2 \$STK)
Master Booster	100 \$STK	6%	6 \$STK (Instead of 5 \$STK)

Self-Sustainability Measures

A high-performing project's consistency capabilities and long-term life remain its stronghold. Servertech has put in place high-return incentive structures and protocols to keep it functioning for the long term.

Whales Tax

Taxes are another method of maintaining long-term sustainability – by committing 100% of funds to the Treasury. An anti-whale charge will be imposed on anyone who wishes to trade the \$STK token without engaging in the ecosystem.

Floating Tax

If the price of \$STK goes up, the sales tax goes down. If the price of \$STK goes down, the sales tax goes up. To prevent speculators from buying with the intention to sell without building a server – a strategy known as pump and dump – the sales tax will be set at 40% for the first few days after launch.

Investment Protocols

Servertech's main goal is to earn long-term, completely transparent passive revenue. We accomplish long-term viability by investing in DeFi protocols with low, medium, and high risks. Our ability to invest in a variety of risk options allows for potentially higher earnings while still ensuring that we meet our daily ROI goal of up to 5% (depending on type of server).

Prior to initiating investment protocols, we will present projects to the community and put them to a vote.

Investment possibilities may include:

Yield Farming: A DeFi investment strategy that comprises lending or staking your coins or tokens in exchange for rewards, such as transaction fees or interest. It is comparable to earning interest on money in a bank account.

- **Leveraged Stable Coin Looping:** In leveraged yield farming, users can borrow tokens to boost their farming positions and increase their farming yields.
- **Liquidity Pools with a Low Chance of Impermanent Loss:** Liquidity pools represent a relatively low-risk investment that earns income from trading fees based on the percentage of the liquidity pool you own.
- **Single Asset Lending and Farming:** When a single loan is issued to a single borrower and secured by a single property it can be securitized and offered as an investment to purchasers on the secondary market.

Blue Chip Token Holdings (AVAX, MATIC, SOL, etc.): Investing in blue chip tokens provides stability in our investment portfolio as they are subject to less fluctuation in value.

Angel Investments: These are investments in startups made by high-net-worth individuals. For many entrepreneurs, angel financing is their primary source of capital, and preferred over more predatory forms of funding. Servertech is pleased to present a ground-breaking option that will be implemented natively within the protocol. This will secure seed-level investment opportunities, which will result in the ecosystem utility token being used in a new way.

Other DeFi Strategies (*In development*)

Affiliate Program

Servertech will offer earning opportunities through an affiliate program that rewards new user referrals. For each active user referred to Servertech, affiliates can earn multi-level rewards that pay up to 15% instant commission.

Commission income is instantly withdrawable

1

At level 1, you can earn and instantly withdraw the following commission income:

Level 1		
Basic Server	Premium Server	Master Server
10%	12%	15%
Commission	Commission	Commission

- **For Every Basic Server built:**
10% commission income is earned.
- **For Every Premium Server built:**
12% commission income is earned.
- **For Every Master Server built:**
15% commission income is earned.

Commission income is instantly withdrawable when the member claims their income

2

At level 2, you can earn and withdraw the following commission when the member claims their income.

Level 2		
Basic Server	Premium Server	Master Server
1%	2%	3%
Commission	Commission	Commission

- **For Every Basic Server built:**
10% commission of their income is earned.
- **For Every Premium Server built:**
12% commission of their income is earned.
- **For Every Master Server built:**
15% commission of their income is earned.

Governance

Servertech is a community-oriented project that encourages the participation of individual investors. As such, Servertech incorporates some DAO protocols in its pursuit of a decentralized atmosphere for its community members. The community makes decisions on which protocols to invest in through a governance vote. The number of servers you possess determines your voting power.

Tokenomics

\$STK is a utility token based on the Avalanche Network. On the Servertech platform, all transactions will be handled in \$STK and \$AVAX. The \$STK coin will be freely traded and interoperable with AVAX wallets on major exchanges.

Max Supply: 10,000,000 \$STK

Launch price of \$STK: \$1

Server Revenue Distribution

The revenue generated from the creation of servers is split four ways, broken down as follows:

-  servertech.io
-  [@servertech_io](https://twitter.com/servertech_io)
-  [#servertech_io](https://discord.com/channel/servertech_io)
