

HIPAA COMPLIANT FILE SHARING AND MESSAGING IN HEALTHCARE

Are you using HIPAA compliant file sharing and messaging tools to share your PHI and business confidential information?

If you're not, are you falling behind the competition in providing patients what they want – secure access to their medical records so they can take more ownership of their care plans?

Either way, Here are some tips to help you confidently provide what your patients need.

You're already file sharing and messaging. But is it HIPAA compliant?

- Which messaging app is [HIPAA](#) compliant?
- Is [WeTransfer](#) HIPAA compliant?
- Is [Dropbox](#) HIPAA compliant?

Did you know?

Human error was responsible for 95% of data breaches in the last year.

97% of employees in many industries are unable to recognize a sophisticated phishing email.

As attackers become more and more sophisticated in their techniques, businesses are struggling to keep up and train staff.

The CDS Encrypted Sharing solution provides above military-grade encryption for your HIPAA compliant messaging and file sharing communications. Don't leave your practice vulnerable to attack when you use this service.

You want to meet patient's needs and provide file sharing and messaging. But how can you be confident your tools and processes are HIPAA compliant?

- Is it safe to send patient information by email?
- What is secure messaging in healthcare?

How secure file sharing can add value to your practice:

- Enhance patient experience and communication
- Answer patient's demands for easier (and secure) access to their medical records and files
- Meet HIPAA compliance and protect against data breaches

What do you need to consider when ensuring your communications are HIPAA compliant and your patients' data is protected?

HERE ARE THE TOP 5 CONSIDERATIONS FOR HIPAA COMPLIANT FILE SHARING

DATA PRIVACY AND SECURITY TIPS

How CDS' Encrypted File Sharing solution can protect your practice:

Advanced Protection:

No spam or phishing messages get into your inbox. Reduce your risk from Cyber Security hacks and ransomware attacks.

Large File Transfer:

Up to 300mb attachments can be sent in just one message.

Start Sending in Minutes:

There's no setup or configuration required. Just sign up and start sending and receiving.

HIPAA-compliant

messages right away.

Keep your existing email: Encrypted Sharing works with your current email address, and with any email provider. To send and receive a message our software builds an embedded code. Our software only uses the email address as one of the unique identifiers and notifications.

Secure: End-to-end encryption means your sensitive messages and attachments are always secure and clean, both in transit and at rest.

SafeSend: Is a unique key exchange that empowers you to receive completely-secure messages from anyone.

BAA Included: HIPAA Business Associate Agreement provided to Covered Entities during sign up.

Read notification:

Notifying the sender when the message has been read.

HIPAA / HITECH compliance also in compliance with state and local privacy laws.

FREE phone or email support.

Here's a FREE checklist to help you ensure you are safely sharing files doctor to doctor or with your patients and more.
