CLOVERLEAF AI

Your Eyes Everywhere
Get Ahead of the RFP

The Situation:

A Fortune 50 Telco was trying to track new broadband projects nationwide. They were relying on employees to have full command of 1,000s of miles of territory. $5.25 trillion are spent at a local level every year broadband was becoming a more significant spend by the day.

The Incident:

A $3mm broadband project and accompanying state grant were being discussed in Vanderburgh County, Indiana.

The Solution:

Within one month of working with Cloverleaf AI, the Fortune 50 company was able to identify the opporunity in Vanderburgh County, a region they had little coverage in. **Before their 3-month pilot ended, they won the $3mm RFP to grow rural broadband.** Since their pilot ended, they started using Cloverleaf AI to monitor everything from Wireless for First Responders to Franchise Fees.

"Cloverleaf AI is the best platform we use for monitoring government meetings. Their ability to deliver insights from Federal government meetings, County Boards, and City Councils is unparalleled. I can't imagine working without it."

State President - Fortune 50 Telecommunications Company
