

Financial Engineer - Tokenomics Design - JD

Full-time 100% remote position

About Us

Advanced Blockchain AG is a publicly listed investor, incubator, and partner in the blockchain industry. Our overarching mission is to promote growth, discovery, and creation within the global blockchain industry, striving to develop and support projects on the cutting-edge of this exciting field.

Advanced Blockchain (AB) is seeking a talented individual who possesses infinite curiosity. You'll partner with our team to research, design, and develop token economics (Tokenomics) for a range of projects. This typically involves developing a realistic market share analysis, analyzing use-cases of the token including how our existing ecosystem can be tied into the token usage where relevant. You will be the token and tokenomics expert - a key position within the company.

We have extensive knowledge and resources in this space to help you succeed. Coupled with complete flexibility and direction defined by you, this is an extremely rewarding position with unlimited upside.

Responsibilities

- Develop market share analyses with revenue estimates
- Develop novel token use-cases
- Create degen strategies
- Be responsible for identifying and communicating new opportunities for tokens and revenue models including governance-related
- Help create strategies to develop new ways to look at tokens and their usage in the web3 space
- Research deeply all other DeFi protocols in the space and be up to date with the latest releases in the market.
- Support ad hoc reporting requirements and/or special projects, developing and improving upon existing tokenomics

Requirements

- Web3 track record of building tokenomics models
- Passion for thinking about new use-cases for tokens and tokenomics
- Ideally knowledge of economics, finance, and game theory

Personal Attributes

- Intellectual curiosity and a genuine interest in cryptocurrency and blockchain industries.
- Willing to grow in a startup environment; open-mindedness and adaptability.
- Time management and capability to work under tight deadlines.
- Ability to think creatively and insightfully about business-relevant economics problems.
- Ability to operate independently.
- Strong analytical skills and attention to detail.

Benefits

- 100% remote & flexible hours
- Growing challenging environment for your steep learning curve
- Individual development opportunities (conferences, meet-ups, courses, and more!)
- Additional working equipment to improve your workspace
- Paid time off for your work-life-balance
- Team Events to build a successful team
- Crypto Payment (USDC)
