Introduction

This whitepaper will guide you through **Unity Network's** NFT-based ticketing system, **EveCom**.

We want you to do your own research. May we suggest that you read through the whitepaper carefully while you sip your “DYOR Coffee”?

**We are proud to share
our values with you!**

Who are we?

**We are a blockchain company
..no that's not exactly it.**

Unity Network is a user-centric, software development company and the creator of **EveCom**. We leverage blockchain technology to build a better NFT-based ticketing system that solves major pain points and challenges with traditional ticketing systems.

Our mission is to create an inclusive platform that empowers users of all backgrounds and levels of technical ability to take advantage of this new generation of financial technology.

As blockchain technology rapidly becomes more integrated with our financial lives, we believe no one should be left behind.

The Founders

Extensive experience in Web3

Behind Unity Network stands a team with extensive experience in Web3, blockchain and crypto technologies. Being early adopters of the technology with development leading back to 2014.

Team UNITY

Charles Ellingsen
CEO & Founder

Charles has over a decade experience in management training and have been teaching HR for the last eight years. He has been involved in Web3 since 2014, and been a Web3 advisor since 2016.

Lately, his view on Web3 has been published by Nasdaq.

Soufiane Hajazi
CTO & Co-Founder

Soufiane has extensive knowledge and experience in Web3 technologies. He is a Web3 speaker in North Africa paving the way for the next generation.

He has worked with protocols such as Aave and MakerDAO.

Michel Caspers
CMO & Co-Founder

Michel has experience in community management, communication, media representation and is a firm believer in blockchain technology.

He has worked as a content creator for political parties in the Netherlands.

Core Values

Reduce costs

NFT-based tickets with low production costs can be minted and sold in less than a minute. **EveCom** includes all the tools needed to create, promote, sell and verify the NFT-based tickets on the blockchain.

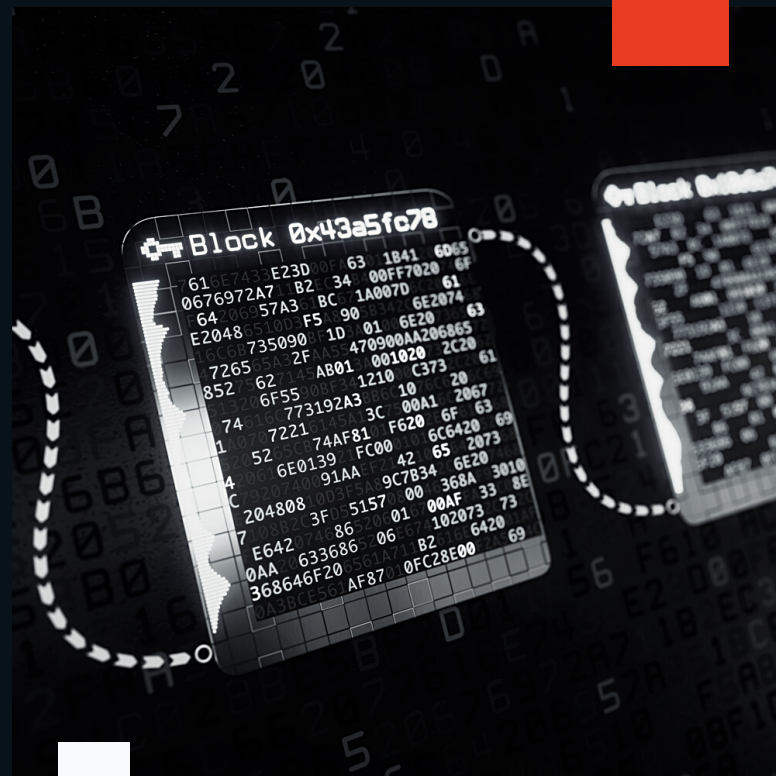

Security

EveCom's NFT-based ticketing system makes it impossible for users to commit fraud or resell tickets. The tickets are only valid with the wallet they were bought from, which removes the pain ticketing companies face with scalpers, scammers and profit seekers. Fake tickets or QR codes do not work. Only a wallet connected to that specific ticket is eligible for entry.

Transparency

Customers and organizers can validate the authenticity of every ticket on the blockchain and track the history of ownership. Preventing scalpers with ticket limits and resale is not possible with non transferable tickets.

Mission Statement

EveCom - Your event companion!

EveCom is an NFT-based ticketing service accessible to **everyone**. It enables both private and professional event organizers to create, promote and sell NFT-based tickets for any event, physical and virtual - **worldwide**.

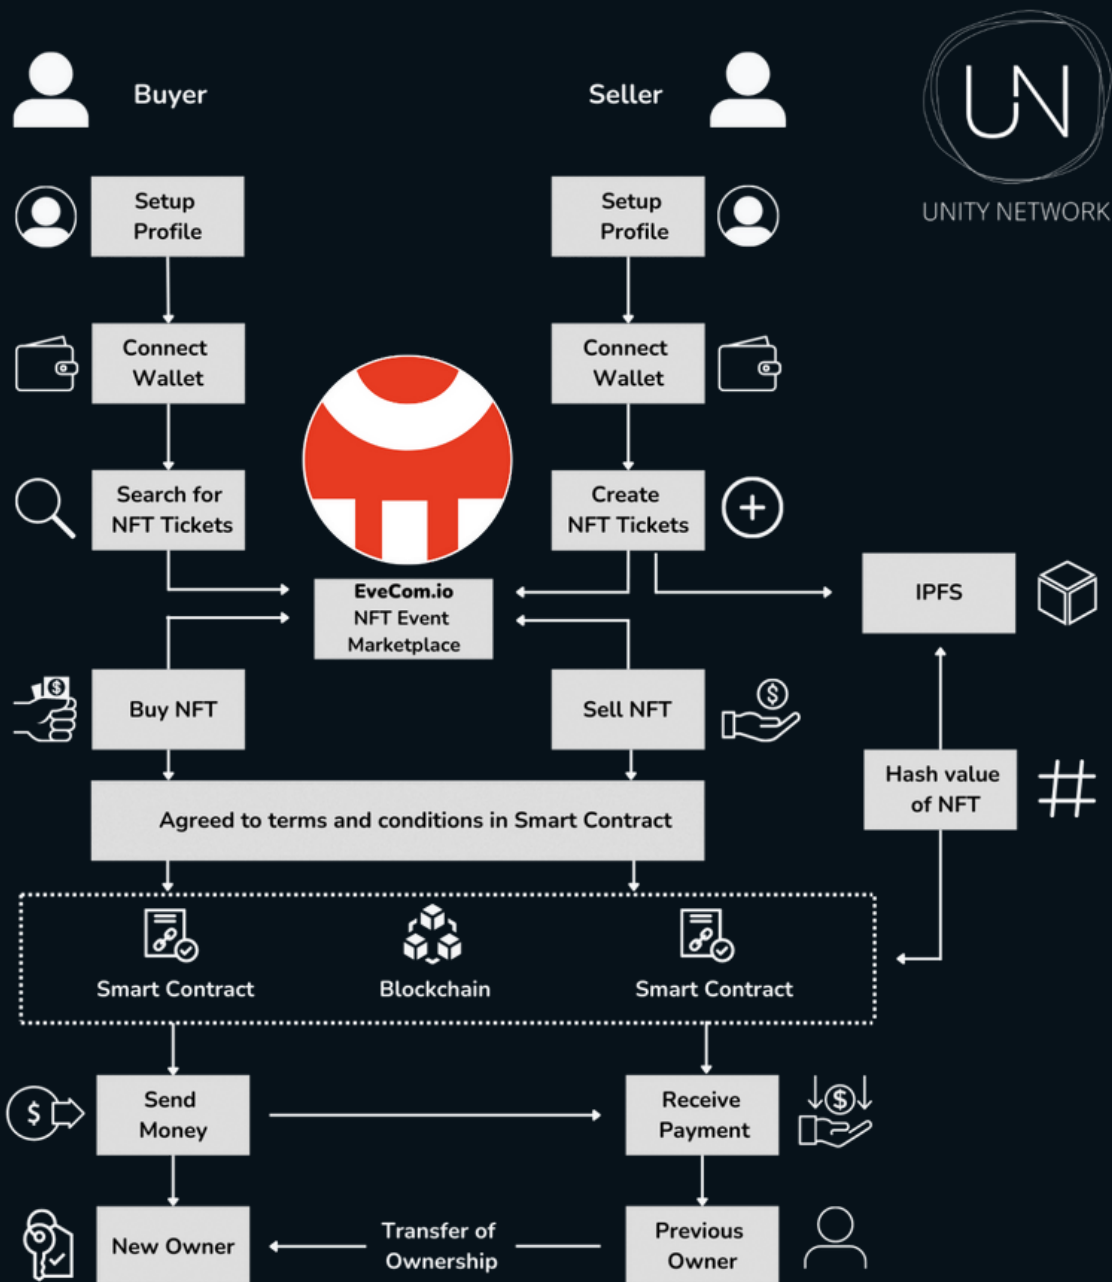

EveCom is built to be secure, transparent and to reduce costs.

How EveCom Works

NFTs are unique digital tokens stored on a blockchain.

Organizers create NFT-based tickets on the blockchain, which are sold to customers digitally. Customers then store the tickets in a Web3 wallet, accessible on any device.

Revenue and Design

Revenue Generation

EveCom has a pay-per-use model. Users purchase the package suitable to their needs, with no monthly fees or subscriptions. Discounts and advantages are offered to holders of UNT. The use cases for the token grow with EveCom, driving up the token's value for investors.

EveCom's competitive price model allows the platform to grow over time, increasing marketing and the range of possibilities Unity can offer to its community of investors and users.

Design Philosophy

Quality-of-life issues such as ineffective UX, UI, user education, and visual design hold back many DeFi projects from achieving mainstream adoption. **Unity Network** holds these user-focused design elements in high regard and recognizes that giving users a world-class experience is a big part of bringing **EveCom** into a new era of mass adoption.

EveCom is designed with the user foremost in mind.

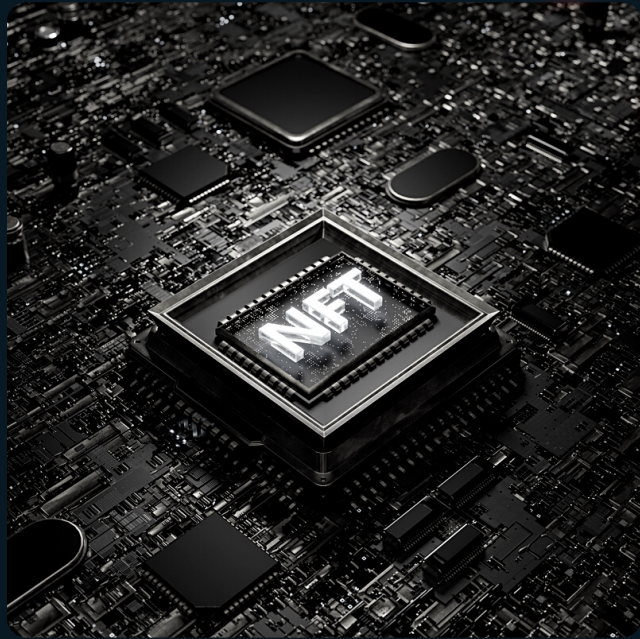

- Revenue opportunities
- Perpetual revenue
- Transparency
- Ease-of-use
- Security

Following this philosophy will ensure **EveCom** not only provide a great experience for the user, but that it solves the major challenges in the traditional ticketing industry.

Unity Network Token

UNT is an ERC-20 utility token running on the Ethereum network. The Ethereum network is the most standardized and widely-used smart contract platform, and so holds the greatest possibilities for adoption and compatibility.

EveCom offers discounts and advantages to holders of UNT. The use cases for the token grows with EveCom, driving up the token's value for investors.

Power to the UNT holders!

UNT

Quick Reference Guide

Token Standard: ERC-20
Total Supply: 9,983,000 UNT

Official UNT Token Address (Ethereum):

Security Precautions

User safety is paramount in the burgeoning world of DeFi, and **Unity Network** takes the stewardship of its users' funds seriously.

To this end, **Unity Network** has strict policies that will ensure the safety of the UNT token, the happiness of the staff and security for our partners.

Security Auditing

EveCom cyber-security audit

A cyber-security audit involves a comprehensive analysis and review of the IT infrastructure of your business. It detects vulnerabilities and threats, displaying weak links, and high-risk practices.

EveCom will be thoroughly tested and audited by a cyber-security auditor to ensure the safety of its users.
