

# Container Roof System

Client: Ministry of Defense

Property: Outside training facilities

Contractor: CA Roofing Services

Location: Harrogate, Perbriht, Winchester, Catterick, Devonport

Deployable container roof system for the UK combined armed forces designed to complement the military physical fitness training programme. Working closely with our client, a bespoke design was created complete with all structural engineering. This project came about from the need for more space undercover by the military to meet modern training requirements, in particular following the Covid pandemic. These facilities allow the troops to be able to continually excise whilst fully kitted out, gaining the benefit of shelter whilst still accessing an outdoor environment. The brief was that the structures need to be able to be deployed anywhere in the UK.
