Product description

SITE

is a modular storage system, consisting of open units and closed units with doors. The elements can be combined freely. Corpuses are offered in two widths and three heights. A sideboard with flaps and an open, wall-mounted shelf are available as wall-mounted furniture. A sideboard with flush sliding doors and a media element round off the range. Units, front panels and covering panels can be chosen and combined in various finishes. The handle profiles are available in either aluminium anodised matt or chrome bright.

Raster and construction

Units are 43 cm deep (inclusive front panels) and either 50 cm or 100 cm wide. The raster heights are 77,3 cm (2 folder heights), 114,5 cm (3 folder heights), 210,0 cm (5 folder heights). Leveling feet (3 cm) as well as an imperative covering panel (0,8 cm) at credenza and highboard elements are contained in these measures.

Single units are the wall mounted credenza E 71/72 with a width of 220 cm and the sliding door unit E 61/62 with a width of 200 cm. Both single units have divergent special heights (see articles). The lower unit of the media element E 51 has a height of 87.5 cm and is matched in height to the sliding door unit.

Units

All units have a grid drilling inside and are offered in three alternatives:

- completely laminate anthracite
- laminate anthracite, sides veneer or lacquer
- completely veneer.

Leveling feet have a black-/gray-coloured powder coating.

Front panels

Surface finishes of the front panels are available in veneer or lacquer. They are lockable on request.

Interior equipment

Filing frames (RAL 9006) can be mounted as front pull-outs or behind doors.

Media element

Flat screens with a diameter from 58 to 70 inches can be attached to the E 51 media element. Optionally, sound bar, camera and microphone for video conferencing can be added. The element contains a monitor holder with a load capacity of up to 60 kg for screens from VESA 200/200 to 600/400. The element has to be fastened to the wall to prevent from falling over. A wall socket and data connections at the rear / bottom of the wall are required on site for installation. Ventilation openings are built-in.

There is a flap door storage compartment in the lower unit of the media element. It may be used to store accessories such as keyboard, mouse, remote control, There is a main switch and a USB 3.0 data socket for presentations with USB flash drives. The corpus, with a total depth of 22 cm, offers space inside for hardware equipment and a power strip with 4 x power.

Sliding doors

The sliding door unit E 61/62 has pre-front sliding doors to be opened mutually. They are moved forwards and following sideways above the other front panel.

Assembly

Storage elements are delivered completely assembled and have only to be placed flush in line and screwed together on site. Afterwards the continuous upper covering panel (maximum length 250 cm = 2,5 width grids) is mounted at credenza and highboard elements. Units with filing frames have to be fastened to the wall by customer to prevent from falling over.

The sliding door unit is delivered ex works with a preassembled and adjusted fitting. The element has to be set up exactly and must be fastened to the wall by customer — this is precondition for the faultless function of the sliding doors. Afterwards the sliding doors are mounted. For this please follow the notes in our assembly instruction.

The wall mounted credenza E 71/72 can only be installed to a load-bearing wall.

Please, already observe the assembly requirements in the field of planning and ask about the constitution and load capacity of the relevant wall. Reinforcements in the wall construction are required for dry and stud walls.

The assembly material (screws and plugs) has to be harmonized to the relevant wall. Therefore it cannot be enclosed ex works.

- E 51 Media element
- E 52 Flap door front
- E 59 Covering panel for E 51
