sonet.io

Secure remote development with Sonet.io Trusted Access™

Overview

Sonet.io provides frictionless secure access to development resources for your remote workforce. Our solution allows you to control access, to continually assess risk, and to protect source code and servers, with zero deployment, so you can build products faster.

PAIN POINTS	OUR SOLUTION	BENEFITS
Remote everything – Engineers, development apps and servers	A SaaS service to secure access for any engineer, any app, any server, anywhere	▪ Securely leverage engineering resources anywhere
Limited control over contractor devices and BYOD	No agents required on any device. Centralized secure access for contractors and employees via a single URL	▪ Eliminate the cost of shipping & maintaining devices
Minimal visibility into engineers' activity accessing development environments	Full logging & session recordings showing policy violations & behavioral anomalies	▪ Improve productivity - onboard employees and contractors in minutes
Existing disjointed solutions create security gaps, increasing engineers' frustration and slows down development	Integrated security with fine grained policy controls to your SaaS apps, servers and desktops	▪ Protect your most valuable IP residing in your development environment from exfiltration or theft

Sonet.io Trusted Access™
From Zero to Trust in 15 minutes™
