Turnkey solution for future-proof EV charging infrastructure

One OS for all AC and DC (CCS\(^1\)) charging stations and wallboxes, providing a fast and low-cost route to market for EV charger OEMs. One-off license fee + 20% yearly maintenance fee, unlimited chargers.

Josev Professional is the first OS to enable Plug & Charge, load management, V2G/V2H/V2B and predictive maintenance (based on ISO 15118 & OCPP 2.x). It is based on our own open-source software, Josev Community\(^2\), a peer-reviewed gold standard that reduces interoperability issues.
