Introduction

Etherice aims to redefine the standards of staking, leading the way forward to better profit based experiences for our users.

Users can buy Etherice Tokens (ETR) with Ethereum (ETH) on our user-friendly dApp. They can then stake their tokens to ETH dividends from the daily auction lobby.

Our platform is expertly crafted with an array of protocols that allow users to deploy strategic game theory. This allows the chance to generate maximum profits without having to rely on selling ETR tokens in a 'swap' to realize profits.

Welcome to the future of staking, welcome to Etherice.

Features

The Etherice platform presents a wide array of features with simple site navigation and various functions to suit your trading style. Here in our whitepaper we'll give you an understanding of what Etherice has to offer.

Learn about our Auctions, Staking, how Ethereum Dividends are distributed, Buying & Selling stakes on our marketplace, our Loaning protocols, referral system, lottery, tokenomics and even how to use Game Theory to get the most out of Etherice.

Your insights to a better staking experience begins here.

Auctions

Our auctions are where you'll purchase your Etherice (ETR) tokens for staking, each day there will be one auction.

Users bid for shares of the auctioned ETR tokens with Ethereum (ETH), at the end of auctions you can claim a share of ETR tokens equal to the % of ETH you deposited in that day's auction.

I.e if you deposit 1 ETH in an auction that has raised 10 ETH, you would receive 10% of the ETR tokens that day.

You can then stake your ETR tokens and begin accumulating ETH dividends.

On Day 1 - three million ETR tokens will be minted and put up for auction. There are auctions daily, each day the token supply minted and put up for auction will be 3% less than the previous day's auction.

Staking & Dividends

Staking is the main feature of our platform, allowing users to earn ETH dividends for passive profits.

Dividends are the rewards paid to users daily for staking on our platform.

Staking is akin to a high-yield savings account - it is the process of locking your ETR tokens inside of our staking contract and in return you're rewarded with passive income through dividends paid out in ETH.

First purchase ETR tokens in our auctions, then stake them in our user-friendly dapp. This will lock your ETR tokens in our staking contract - earning ETH dividends daily for your allotted staking period.

Once your staking period has ended your ETR tokens will 'unlock', allowing you to un-stake your ETR tokens and claim your ETH dividends. Once ETH dividends are claimed - you can re-stake your ETR tokens for further dividends.

ETH dividends are paid out from the previous auctions across a period of up to 30 days.

Buy & Sell Marketplace

Buying & selling stakes are options provided in Etherice that broaden the field of earning potential within our platform.

You can't sell ETR tokens in a swap, but you can sell your 'stakes' to others in our marketplace.

In our marketplace users can see ETR stakes listed, how many days remain on the stake, how much ETR is staked, the stakes accumulated ETH dividends and the price for the stake.

As a seller, you would sell your staked ETR tokens and your stakes accumulated ETH dividends for Ethereum.

As a buyer - once a stake is purchased, you will keep all Eth dividends accumulated by the stake, available to you along with the ETR tokens once the stake unlocks. When purchased the ownership of the stake will be transferred to your Defi wallet, this process happens automatically.

Loaning

Loaning provides Etherice users with realized profits before their staking periods ends, without selling.

Once your ETR stake has accumulated ETH dividends - you can request a loan up to the value of the ETH Dividends in your stake.

The loan request must factor in the interest you're willing to pay the loaner. Your loan requested + interest can not exceed the current value of the ETH Dividends your stake has accumulated.

The loaner would provide you with ETH now, with a guarantee that they will profit when your stake unlocks.

I.e If your stake has accumulated 6 ETH in dividends, you could request a loan for 5 ETH with 1 ETH interest. If the loaner agrees, you receive 5 ETH now, with 6 ETH from your dividends automatically contracted to the loaner when your stake unlocks.

Any further dividends accumulated outside of the 6 ETH loan repayment during your staking period - would be yours to keep.

Referrals

Etherices referral system allows both referrers and referees to benefit from token bonuses.

You can refer people to Etherice for mutual benefits using our referral links, a unique link will be generated for you to give to your referee. Once your referee uses your link, purchases ETR tokens in our auction and stakes them - you will both receive a token bonus once their stake unlocks.

As the referrer, you will receive a 3% ETR token bonus and the referee will receive a 1% ETR token bonus, minted automatically from our contract. Both parties win and you're able to stake your new tokens for further Eth dividends.

Lottery

The Etherice lottery can be won daily - buy big to win big!

Each day a lottery pool accumulates Eth built up from 1% of our daily auctions total, this lottery can be won on any day.

Initially our lottery will accumulate until day 10. The biggest buyer in our ETR auctions on day 10 will win the lottery on day 11. From then on - the lottery can be won on any day

by placing a buy in the auction that is higher than the current top buy of all time.

The top buy (to beat) is reduced by 5% each day. When there is a winner, they will receive 30% of the lottery pool, 30% will go to a rewards wallet for future use, 30% will rollover to the next lottery and 10% is put towards marketing and development.

To enter our lottery - simply buy ETR from our auction on the day you wish to enter, if your buy beats our 'biggest buy' then by the end of the day it will win our lottery pool. Winners can claim their rewards from our lottery page the following day.

Game Theory

Utilizing the daily auction system, users are able to see on a day by day basis whether this is the best day to enter or not. Our robust staking system then encourages our users to create multiple stakes of different time lengths to benefit from the platform.

Though there is no guaranteed winning strategy, through examining strategies that analysts have cultivated - we can determine some of the best options within that system.

Buying Strategies

The Day 1 Ape Strategy

Buying ETR tokens on Day 1 gives users the opportunity to stake immediately, enabling the fastest reception of ETH dividends. The 'Ape Strategy' involves buying as large of a share of ETR tokens as you can for the biggest immediate dividend payments, stake your tokens, then 'forget' until your staking period unlocks. This strategy has proved popular in similar past platforms.

The Day 1 ape also helps support the project, with more funds being allocated to buy backs & development.

The DCA Strategy

The more ETR you have staked, the greater share of ETH dividends you'll receive.

As such - our auctions can be approached in a tactical manner.

Buying ETR tokens on busy auction days means that there are more buyers to divide the auctioned tokens between, inversely this means quieter auctions divide a greater share of ETR tokens between less buyers for a lower cost, allowing you to accumulate more ETR for less.

This is the equivalent to 'buying the dip' or 'Dollar cost averaging'.

Since tokens are sold every day and dividend rewards are distributed over up-to 30 days, there is never a bad day to buy in terms of gaining more share rate. Utilizing dips will keep you competitive within the platform and keep you earning high % returns for months to come.

Staking Strategies

There is unlimited flexibility when it comes to staking, with the emphasis being on users choice, however there is one proven key strategy:

The Multiple Stake Route

Having multiple stakes of differing lengths is advisable. For example:

- One long stake up to the cap of staking days (60 days) for profit taking.
- One medium length stake for profit taking and DCA'ing dividends back into the auction.
- One Short length stake for pure DCA'ing.

This strategy allows the user to remain competitive within the auction and share rate, whilst also having sizeable dividend paydays available via the medium and long stakes!

Distribution/Supply

The Etherice native token, ETR, is the token minted daily for our auctions that users bid on and then stake for ETH dividends on our platform.

The ETR token was developed with a logarithmic minting system, meaning that a decreasing amount of tokens are minted each day, which allows for better management of supply in the long term as auctions continue.

On launch day, 3 million tokens are minted for auction. Each day after that, the previous days token supply is minted again - minus 3% and put up for the daily auction.

The only other tokens that will be minted are bonus referral tokens, which are only minted after a user who has bought ETR & staked it - unlocks their stake.

ETR Tokens can not be sold on a swap, meaning there is never a sudden decrease in value because of 'chart dumping'. Users who don't stake won't receive Ethereum dividends, so excess ETR tokens that are not being staked - do not negatively impact users who are actively staking.

We also manage our ETR token supply with Buyback & Burns, where we use ETH funds from our designated BuyBack wallet to purchase ETR tokens in our auctions. The ETH we used to buy ETR will then be distributed to stakers on our platform as dividends, we send our purchased ETR tokens to a burn wallet - so we never affect our users rewards.

Taxation

On days following when dividends are paid out from daily auctions, a tax is taken on the dividends for utility, growth, development and marketing.

4% Development

Development funds support Etherice in all areas, from updates to our website, contracts, designers, moderator team, future partnerships and other updates & expansions in our future.

1% Marketing

Our marketing funds go towards promoting Etherice across all media platforms - through the likes of influencers, promoted ads, youtube campaigns and more.

1% Buyback & Burn

The buyback & burn funds allows us to help keep our ecosystem healthy by topping up ETH dividends and removing ETR tokens from supply.

1% Future Reward Pool

The future rewards funds go towards community rewards for uses such as competitions, prizes and giveaways.

1% Lottery Pool

Our lottery tax contributes more funds to our lottery, giving bigger incentives for people to enter and a bigger reward to be won.

Staking Tax

Our 10% staking tax helps support Etherice & dividend distribution - with 5% going to development and 5% added to the dividends pool.

Loaning Tax

Our loaning tax is 2%, with 1% supporting Etherices development and 1% added to the dividends pool.

Roadmap

The Etherice roadmap provides our users with an insight into our development journey and project vision, showing our past achievements, our current progress and future project milestones.

As Etherice evolves our roadmap will be subject to updates, keeping our users up to date and aligned with our project vision.
