

The logo for EGTPRO features the company name in a bold, white, sans-serif font. The letter 'O' is replaced by a white gear icon with a central hub and spokes. The logo is centered within a large, dark teal, rounded shape that has a slight gradient. The background of the entire image is white, decorated with a network of light blue lines connecting various nodes, some of which are represented by small teal circles and triangles. There are also several larger, solid teal triangles scattered throughout the design.

Mission Statement:

EGT Pro

will provide cutting-edge technology to simplify, streamline and implement cryptocurrency adoption solutions on a global scale.

SIMPLIFIED • ADOPTION • SOLUTIONS

Market Overview:

Point Of Sale:

Merchants are currently paying fees in order to accept cryptocurrency as payment through various gateway processing systems that offer a backend fiat conversion solution. Merchants also pay a standard credit card processing fee when accepting cryptocurrency-funded, pre-loaded credit cards that cryptocurrency exchanges provide to account holders.

Crypto Based Consumers:

Web3.0 investors are hungry for the acceptance and adoption of blockchain technology, and ultimately, for cryptocurrencies to present a viable alternative to that of fiat currencies. There is a desire amongst this growing demographic to enter a brick-and-mortar store or E-commerce platform and be able to conduct seamless transactions in a variety of cryptocurrencies. Cryptocurrency investors understand that this form of utility is the formula to market stability and the growth of their digital assets.

Access:

Getting started in cryptocurrency generally begins with the opening of a trusted exchange account, depositing fiat currency and then purchasing blue chip cryptocurrencies such as Bitcoin, Ethereum or BNB. From there, investors can send blue-chip cryptocurrencies to an external wallet and swap into tokens from various cryptocurrency projects with a compatible swap pairing.

Market Overview:

Crypto Token Purchasing:

Web3.0 investors looking to purchase tokens of projects that aren't listed on their preferred exchange platform are forced to utilize technology that is likely to confuse novice investors. Understanding gas fees, slippage and the wallet connection process is frustrating for many, and acts as a very real barrier to the flow of capital cross-chain and cross-exchange.

Token Projects:

There are thousands of cryptocurrency projects with various roadmaps, all of which are looking for exposure to, and solutions to add for, their token holders. Without costly exchange listings that provide exposure and simplicity in the acquisition of their token, many projects suffer stunted growth despite the value they add to the market.

Impact:

There's a strong focus from many cryptocurrency projects to have their native asset used to transact. Communities become excitable when large businesses accept the cryptocurrency at hand as a form of payment for goods and services. One glaring issue with this is that most businesses that receive any cryptocurrency as a form of payment then sell it back into fiat currency, which stimulates sell pressure. A solution that doesn't result in a zero-sum transaction is needed as cryptocurrency token communities aren't actually impacted positively when businesses receiving their token as payment immediately exchange it for fiat.

EGT Pro Solutions:

EGT Pro Wallet Technologies are designed to simplify cryptocurrency adoption by creating user-friendly solutions that can be found under one umbrella. Our cryptocurrency wallet technology will service and interact with investors, consumers and merchants in a way that the market has yet to experience.

Point of Sale:

EGT Pro is the first cryptocurrency wallet that caters to merchant processing. Merchants using the wallet will be able to accept EGT Stability Token from consumers, deriving from a variety of cryptocurrency assets that they can then swap out for directly within the wallet. Merchants won't pay a processing fee to receive payment like conventional credit cards do and will actually be rewarded by collecting a nominal convenience fee paid by the consumer. The integrated Stability Token virtually eliminates price fluctuation to the dollar standard which makes it easier to manage from a risk perspective. With a touch of the screen, merchants will have the option to stake the EGT Stability Token and earn interest. Any amount of EGT Stability Token that the business doesn't desire to convert into fiat can be put to work as part of its revenue model through staking rewards. Thanks to the proposed Stability Token Merchants will have the ability to save on processing fees, profit from transaction processing, and earn interest on cash flows.

Merchant Transactional Process:

When creating an EGT Pro wallet, a 9-digit number is generated, similar to a phone number that is easy for a user to remember. By providing this 9-digit number to a merchant, a consumer can be sent a purchase price total and be prompted to accept or decline an additional service fee determined by the vendor. Wallet security features only allow the owner of the wallet to gain access to funds while giving merchant employees verification that the funds used to purchase have been successfully transferred.

EGT Pro
SIMPLIFIED • ADOPTION • SOLUTIONS

EGT Pro Solutions:

Crypto Based Consumers:

Web3-oriented consumers using EGT Pro will have the ability to transfer existing cryptocurrency holdings from other wallets and exchanges into our ecosystem for swapping and retail purchases. Through the payment of a nominal convenience fee, consumers will be supporting and accelerating true cryptocurrency adoption at a retail level. Consumers will also have the option to internally convert wallet holdings into the EGT Stability Token and earn interest on wallet holdings that are staked. Options to purchase cryptocurrencies with credit card, Apple Pay and Samsung pay are also available within the wallet.

Access:

Listed projects will receive their own branded EGT Pro wallet that will still carry our branding around the DeFi space. Blockchain projects will have the ability to list their underlying token on EGT Pro, thereby creating paired swaps from a variety of blue-chip cryptocurrencies for their Token. For example, a Token project hosted on the Ethereum blockchain can list its token on EGT Pro, allowing future holders to buy it without the necessity of holding Ethereum itself. They will have the ability to execute an exchange style swap from cryptocurrencies such as Bitcoin, BNB, XRP or USDT directly to the Ethereum Token. EGT Pro is essentially providing inbuilt exchange services, with the wallet function enabling investors to bypass confusing, time-consuming and knowledge-dependent swapping steps used to attain access to projects that aren't listed on their preferred exchange.

EGT PRO
SIMPLIFIED · ADOPTION · SOLUTIONS

Security:

The EGT Pro wallet is a web-based interface utilized for the creation of a Web 3.0, cross-chain decentralized platform. Users can create a wallet using their internet browser, with the wallet information being stored locally on their device. A double-encrypted hashed (salted) wallet file is stored on the blockchain with a unique ID. Once a user calls the file from the blockchain, the interface can decrypt the file with the password used at wallet creation, or alternatively access the wallet directly from the chain via seed phrase. With added features and considerations, EGT Pro's wallet security easily bests that of industry leading competitors. One of the major security concerns with existing wallets is the ability to connect to a third-party website or dApp. The EGT Pro Wallet will not have the ability to connect to any page as there is no "wallet connect" feature. Meta Mask and Trust Wallet have huge security risks, while Apple removed the dApp browser from Trust Wallet due to security concerns. Coding for our wallet will be made public through publication via an open repository once the application is released, allowing for immediate verification of the code's authenticity.

Efficiency:

The EGT Pro Wallet solution will implement custom transactional routing which will not only find the best exchange rates across chains but also within one network by identifying the best route through multiple decentralized exchanges (DEXs). The Token contract will implement a revolutionary standard for processing DEX fees and users will enjoy minimized gas fees on all transactions.

Impact:

More information is provided below on the interaction between EGT Pro and the \$EGT Token. The most impactful solution achieved in this interaction is the use of EGT's Stability Token servicing point of sale transactions without the selling of \$EGT Token. EGT Pro is the world's first point of sale solution where all buying and selling occurs outside of a Token and only the fees collected are used to buy the native Token, meaning the native \$EGT token, and its community, benefit from buy pressure only.

Investment:

Revenue Model:

EGT Pro Wallet collects a variety of transactional fees. All fees are priced below the current industry standard. A portion of the fees are retained by EGT Pro for operations, marketing, reward token acquisition, investors and EGC-NFT Holder compensation. The balance of fees will be dedicated to purchasing and burning of the native \$EGT Token to reward the community of users that support the ecosystem.

Sources of Fees:

EGT Pro Organization:

EGT Pro is a registered corporate entity in Costa Rica. Management consists of cryptocurrency-focused attorneys and accountants. EGT Pro has a variety of technical developers that build out platform innovation and consultants that assist in user adoption.

EGT Stability Token:

The EGT Pro Stability Token is the backbone of the payment gateway ecosystem. EGT Pro Stability Token isn't pegged like USDT for example. It's a smart asset deployed across multiple blockchains, stabilized through a decentralized order book exchange to prevent exploitation and volatility of the payment currency's exchange price. EGT Stability Token can be exchanged for fiat currency when needed by merchants and wallet users.

EGT Stability Token to Fiat:

EGT Pro Stability Token will be exchangeable for merchants that require withdrawal of fiat currency from the tokens that they collect from processing. There will be a link on our website for merchants to source various exchanges in their region that provide the solution. The fees to exchange cryptocurrency to fiat are low, often under 1%.

EGT Merchant Advantages:

Given a merchant pays 2-4% when processing a credit card and EGT Pro consumers actually pay them to transact, the savings add up rapidly. Merchants can also input a chosen convenience fee to be paid by the consumer on purchases. In addition, some collected native \$EGT Tokens from buybacks will be paid out as "Processing Rewards", proportional to transactional activity. Returns on interest made from merchants electing to stake EGT Stability Token will assist in further offsetting the nominal fiat exchange fee.

EGT Pro's Interaction with \$EGT Token:

- Elon GOAT Token (\$EGT) is the preferred token of EGT Pro. EGT Pro is structured to use a portion of the service fees that the Company collects to buy and burn \$EGT Tokens. This deflationary interaction aids in \$EGT price stability, scarcity and buy pressure. It also gives EGT Pro a home base to market the product suite and receive active feedback from cryptocurrency users. Through traceable blockchain transactions, \$EGT Token holders will witness the EGT Pro purchases of their token, thereby encouraging them to participate and market the wallet's utility, increasing customer advocacy.
- The EGT Pro corporate purchases of the \$EGT Token deriving from fee-based revenue interacts intelligently with \$EGT's new Ethereum smart contract. Each buy and burn of Tokens actually lifts the base price of the \$EGT Token forever and creates a new impenetrable floor. EGT Pro will essentially relinquish and destroy much of the \$EGT Tokens it acquires. This interaction is highly efficient, altruistic and geared towards mass user adoption and community trust. A portion of the buybacks will also service a rewards pool where merchants are given \$EGT Tokens, distributed proportionally, based on their processing percentages that patriate the ecosystem. This removes additional \$EGT Tokens from circulation, coupled with merchants witnessing the advantages of storing a Token with a growing ecosystem they support.
- EGT Pro will charge a listing fee for white labeled and cross branded copies of its platform. A portion of those listing fees will also be used to buy and burn \$EGT Tokens.
- The \$EGT Token is the first project to construct a world-class cryptocurrency monument dedicated to Elon Musk. \$EGT built the monument to pay homage to the credibility and advocacy Elon brings to the cryptocurrency space. Elon GOAT's monument is planned to tour globally and will act as a marketing-based anchor to both projects. \$EGT plans to deliver the monument to Elon Musk at Tesla HQ in Texas in hopes of gaining global media attention. EGT Pro also hopes that Elon will publicly recognize the contribution \$EGT is making in the realm of cryptocurrency adoption technology, similar to what he did with PayPal.

**Elon Musk has no formal connection to EGT PRO, nor the \$EGT Token at the time of this document's publication.*

EGT PRO V1 Features:

EGT PRO V2 Features:

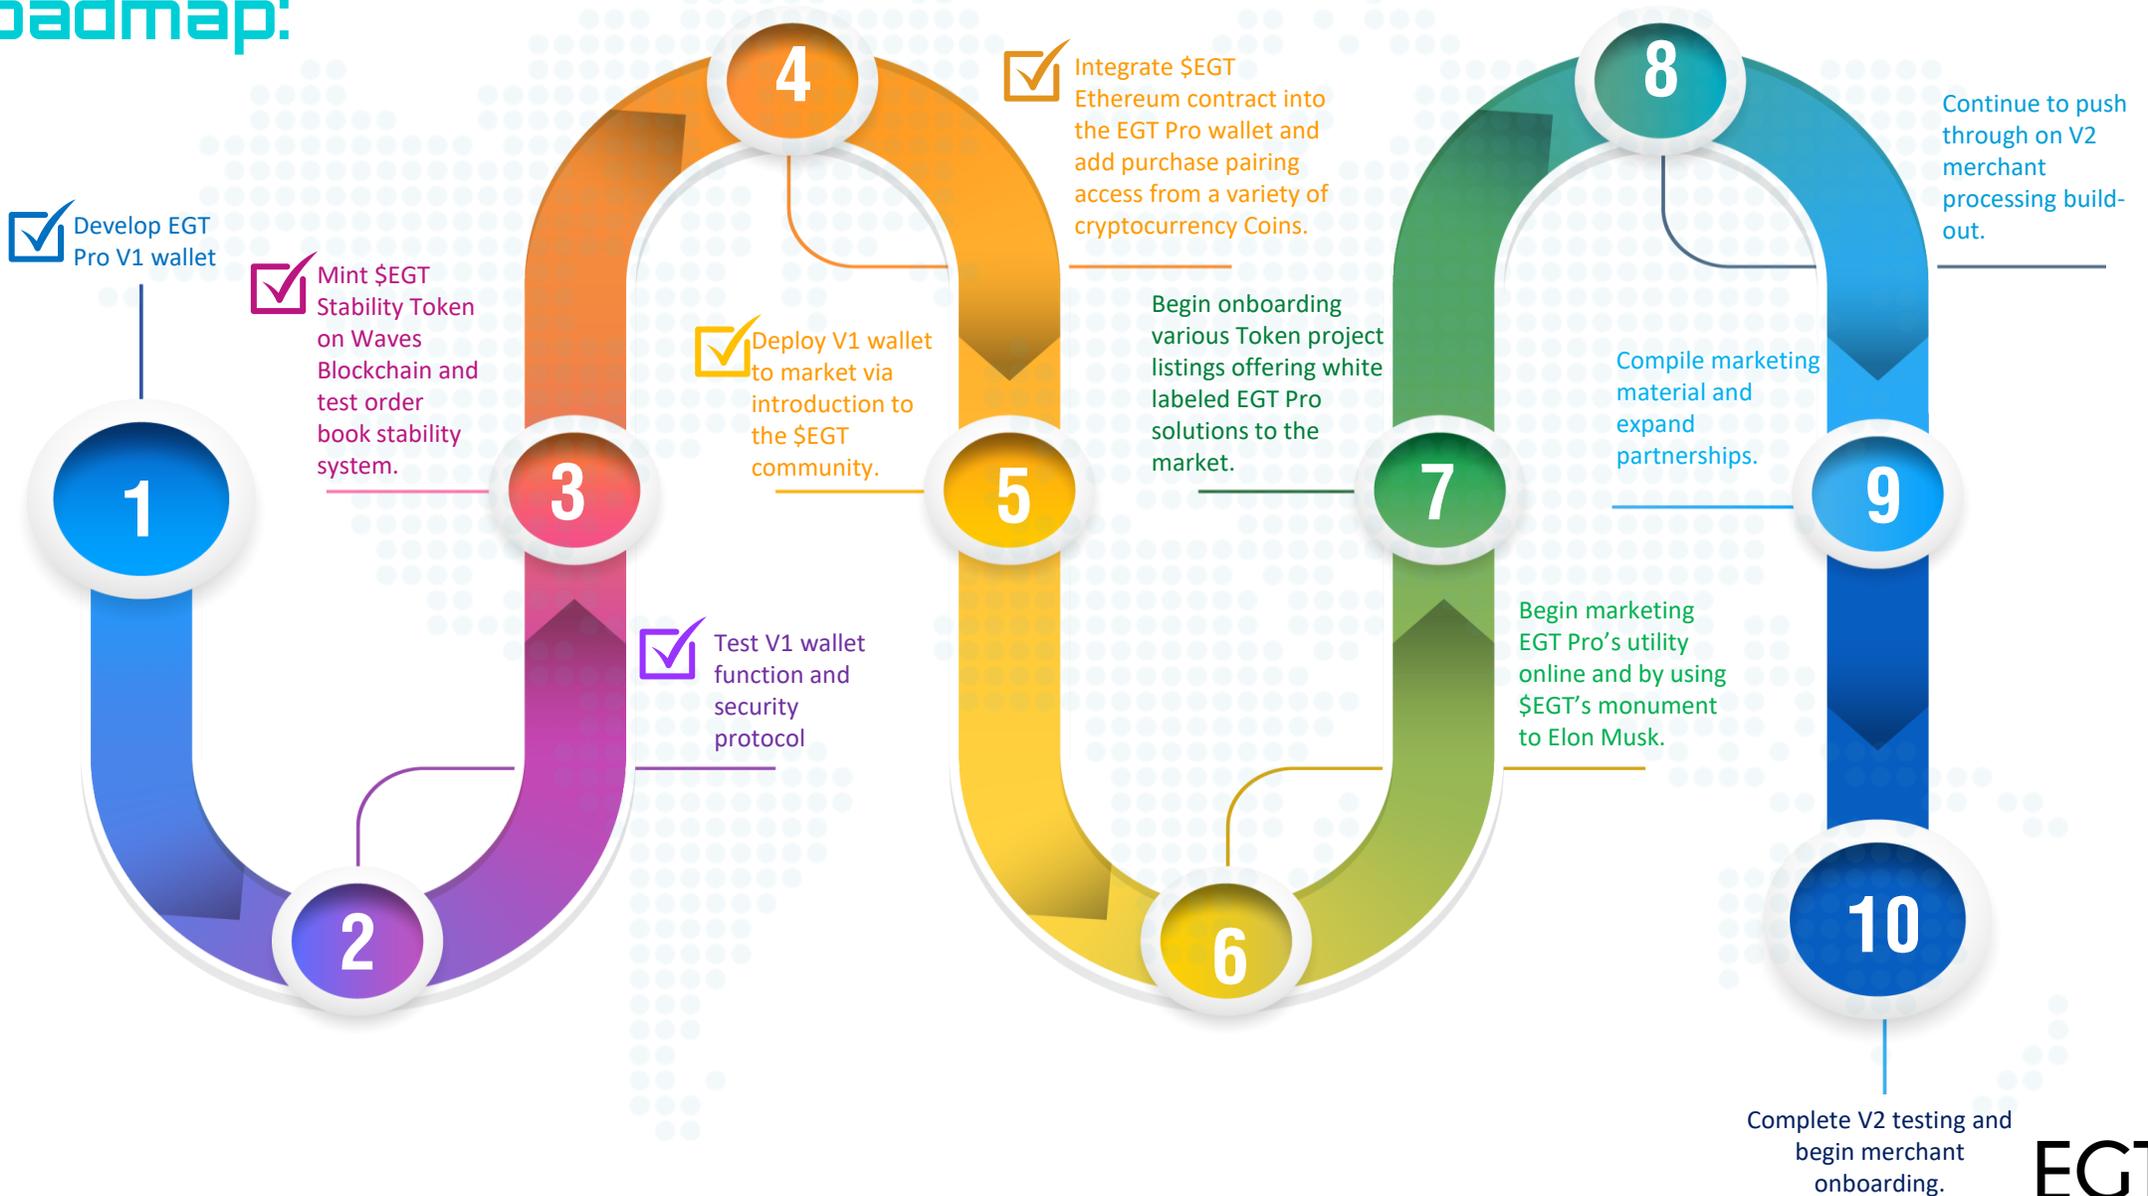

As a Merchant:

As a Consumer-User:

Roadmap:

Full Technical Overview for Phase 2:

EGT Pro is making use of pre-existing decentralized solutions, protocol contracts, dApps and programs deployed across multiple blockchains. EGT Pro will offer the infrastructure needed to integrate the cryptocurrency payment option into existing E-commerce platforms and retail stores enabling the customer to pay instantly with almost any cryptocurrency.

The technology developed by EGT Pro consists of a decentralized, non-custodial, locally hosted EGT Pro Wallet, available on mobile and desktop applications. This provides an interface for merchants and consumers to manage their cryptocurrency.

In the near future users will have the ability to manage their Fiat funds, a set of smart contracts, programs and dApps that are deployed across multiple blockchains. This enables data storage and an automated decentralized exchange. EGT Pro will launch EGT Pro stability Token on the WAVES blockchain boasting transactional speeds below one second. It also features multiple wrapped stable currency tokens that are deployed across chains and quick exchanges into native coins.

The wallet application will create and store all cryptocurrency wallets needed for decentralized blockchain interactions as well as cryptographic signing that's locally encrypted to enable user authentication without the centralized storing of credentials. Additionally, EGT Pro will provide an optional two factor authentication via text messaging which will later be adapted as a decentralized service for text message authentication for blockchain transaction signing.

By making use of blockchain technology, the decentralized infrastructure will securely store and balance cryptocurrency funds for almost instant payment & exchange.

WAVES Technology:

EGT Stability Token is built on Waves blockchain infrastructure. It is fast, low cost and eco-friendly. Waves is a global open-source platform for decentralized applications. Based on proof-of-stake consensus, Waves aspires to make the most of blockchain while minimizing its carbon footprint. Waves technology stack can be beneficial in any use case that demands security and decentralization such as:

EGT PRO
SIMPLIFIED · ADOPTION · SOLUTIONS

WAVES Technology:

The following attributes of the Waves Blockchain will allow the EGT Pro stability Token to actually scale globally as a cost-effective currency to be used by merchants and consumers:

Waves blockchain has extremely efficient decentralized exchange performance

Extremely low on-chain transfer network fees

Has native Ethereum, Bitcoin, Polygon, Litecoin chain gateways to automatically service cross-chain interoperability of all digital assets

100 – 7000 transactions per second and fees below 0.1 cent (\$0.001)
