| :---: | :---: | :---: | :---: |
| - Vector vs. Scalar: Vectors include directions <br> - Displacement vs. Distance <br> - Velocity vs. Speed: Velocity is a vector. ALWAYS include direction for velocity. <br> - Acceleration (also a vector) <br> - Linearization <br> - Big Four Equations $\begin{aligned} & V_{x}=V_{x o}+a t \\ & \Delta x=V_{0} t+1 / 2 a a^{2} \\ & V_{x}{ }^{2}=V_{0}^{2}+2 a(\Delta x) \\ & \Delta x=1 / 2 t\left(V_{x 0}+V_{x}\right) \end{aligned}$ <br> - Projectile Motion <br> - Position-Time Graphs <br> - Velocity-Time Graphs (slope of position graph) <br> - Acceleration-Time Graphs (slope of velocity graph) <br> - Acceleration due to Gravity ( $\mathrm{g}=9.8 \mathrm{~m} / \mathrm{s}^{2}$ ) | - Equilibrium: net force is equal to $\mathbf{0}$ <br> - Newton's 1st Law <br> - Law of Inertia <br> - Newton's 2nd Law <br> - Force $=$ mass $\times$ acceleration <br> - Newton's $3 \leftarrow$ Especially $\Sigma F=$ ma <br> - Third Law Force Pairs (equal and opposite) <br> - Friction $\mathrm{Ff}=\mathrm{F}_{\mathrm{n}} \mu$ <br> - Coefficient of friction ( $\mu$ ) <br> - Ramps/Inclined Planes <br> - Know how to create free body diagram with angles <br> - Force Body Diagrams <br> - Force and Net Force | - Centripetal Force: not a force, just an expression for the net force $\text { - } \quad \mathrm{Fc}=\mathrm{mv}^{2} / \mathrm{r}$ <br> - Centripetal Acceleration $\text { - } \quad A C=v^{2} / r$ <br> - Universal Gravitation <br> - Uniform Circular Motion: constant speed (magnitude of velocity is constant) <br> - Combos with Forces, Energy, Simple Harmonic Motion, Rotation <br> - Inertial mass vs. Gravitational mass <br> - How do you find each one experimentally? | - Work (W = Fd) <br> - Parallel: (+) Work <br> Antiparallel: (-) Work <br> - Work $=$ Change in Energy <br> - PEg, PEs, 2 kinds of KE $\begin{array}{ll} \circ & \mathrm{PEg}=\mathrm{mgh} \\ \circ & \mathrm{PEs}=(1 / 2) \mathrm{kx} x^{2} \\ \circ & \mathrm{KE}=(1 / 2) \mathrm{mv}^{2} \\ \circ & \mathrm{KEr}=(1 / 2) \mathrm{I} \omega^{2} \text { (rotational } \\ & \text { motion) } \end{array}$ <br> - Mechanical Energy: the sum of a system's kinetic and potential energy <br> - Power ( $\mathrm{P}=\mathrm{W} / \mathrm{t}$ ) or ( $\mathrm{P}=\mathrm{Fv}$ ) <br> - Conservation of Energy <br> - Bar Charts, Graphs \& Diagrams |
| Unit 5 <br> Momentum | Unit 6 <br> Simple Harmonic Motion | Unit 7 <br> Torque \& Rotational Motion | 100 FRQ Tips |
| - Momentum ( $p=m v$ ) <br> - The direction of momentum is the same as the direction of motion <br> - Impulse ( $\mathrm{J}=\mathrm{Ft}$ ) <br> - F vs t graphs (impulse $=$ area under curve) <br> - Conservation of Momentum <br> - Center of Mass <br> - Combo with Energy, Rotational, Forces <br> - Collisions (Inelastic vs. Elastic) <br> - Elastic $\rightarrow$ Kinetic Energy and Momentum are conserved <br> - Inelastic $\rightarrow$ Momentum is conserved <br> - The velocity of the center of mass in a closed system is constant | - Spring \& Pendulum <br> - Energy relationships <br> - $\mathrm{F}, \mathrm{a}, \mathrm{v}, \mathrm{x} \leftarrow$ Diagrams \& Graphs <br> - Combo with Forces, UCM, Energy, Rotational <br> - Hooke's Law ( $\mathrm{F}=\mathrm{kx}$ ) <br> - Period Equations <br> - What affects the period of a pendulum? $\mathrm{T}=2 \pi(\sqrt{l} / \sqrt{g})$ <br> L is the length of a pendulum <br> $g$ is the gravitational field <br> - What affects the period of a mass on a spring? <br> - $\mathrm{T}=2 \pi(\sqrt{m} / \sqrt{k})$ <br> - $m$ is the mass attached to the spring <br> - k is the spring constant $\rightarrow \mathrm{a}$ higher spring constant is indicative of a stiffer spring | - Rotational Kinematics $(\theta, \omega, \alpha)$ <br> - Same as Unit 1 Big 4 equations, but with new symbols <br> - Remember $x=\theta R, v=\omega R$, $a$ $=\alpha \mathrm{R}$ <br> - Torque \& Moment of Inertia ( $\Sigma \tau=1 \alpha$ ) <br> - Torque: a force applied to a point on an object about the axis of rotation (not the center of mass) <br> - Net Torque causes angular acceleration <br> - Rotational KE and Conservation of Energy <br> - Angular Momentum \& Conservation of Momentum <br> - Angular "Impulse" | FRQ Breakdown: <br> - Experimental Design: Tests ability to design and analyze lab data. <br> - Quantitative \& Qualitative Translation: Tests ability to translate between quantitative and qualitative reasoning. <br> - Paragraph Argument: Tests ability to make a coherent argument in a physics phenomenon. <br> - Short-Answer (2): Tests skills not highlighted in other questions. <br> Solving Tips: <br> - Does this equation model the correct observations? <br> - Are the variables showing a direct or indirect relationship? <br> - Cite info from the problem <br> - Bring in Basic Physics <br> - Describe how the info works with the Physics <br> - Answer the question with a claim |
