

Terrantic GPS: Terra-Form Digital Worker Application

Labor issues are getting even more challenging in agriculture and food processing. The new overtime laws in many States combined with worker shortages are putting businesses under significant cost pressures. The best solution is to be drive more efficiency into labor productivity.

But how?

Labor productivity improvements start with digitizing your workflows in the field and in the factory. Access to real-time data will automate activities, enable better decisions and will enable you to identify inefficiencies.

Still on the fence? The new traceability laws are going to force digitization on the entire industry in the coming years. Why not get started today so your can leverage these investments to solve your labor issues today?

Terra-Form

Terrantic has developed the most powerful data driven collaboration application for field and floor users. **Terra-Form** enables workers to be more productive than ever by making relevant information readily available and automating certain key routine activities.

With Terra-Form, work staff such as field foremen, technicians, process mechanics, and other workers can powerfully transform productivity to a whole new level.

Terra-Form is available on computers and any connected device. Terra-Form reduces waste, accelerates information exchange, improves efficiency, and optimizes day-to-day operations and maintenance work.

Key Features

Digitized work-order: Terra-Form's tight integration with GPS enables it to digitize work orders and provide guided pathways for optimal completion of activities. With support for checklists, and visual guidance, Terra-Form can transform efficiency.

Scan Tags: Workers can scan equipment and product tags or bin QR codes to access all relevant information and make informed decisions. This reduces the need to go back to office for verification of critical data.

Capture and Share All Field Data: With smart capabilities field staff can capture images and video to collaborate and access real-time data on equipment. Office staff can also see the same data the field workers are seeing to enhance collaboration.

Context Aware Workflow: For every work order or other tasks used with Terra-Form, the application's contextual engine guides and supports users with the right information based on their location and situation.
