

# CARE DON'T CARRY

# Strollo

## Strollo redefines how strollers are designed and used.

Gone are the days of traveling with bulky strollers. With Strollo you don't have to worry about trunk space, luggage restrictions or overcrowded public transport no more.

Thanks to its open and widespread rental platform your Strollo will be waiting for you at your destination.

Anyone can rent a Strollo quickly and easily through an extensive network of pick-up and drop-off points at the bus, tram, or train stations, tourism centers, or other strategic locations in and around the city.

## Revenue model

With Stollo, the value is shared: users only pay for usage, not for ownership, Stollo partners can earn back their investment through its usage fee.

To offer Stollo as a service you'll need space for the quantity of desired strollers and electric power to plug in a tablet to rent them out. We'll give a short education on how Stollo works and how you can help your customers.

## Optimized design

Thanks to its innovative design, Stollo excels in comfort and ease of use.

It can roll over any surface. It's hygienic and easy-to-clean. It has an adjustable backrest, a removable sun visor, a hook and carrycot for extra luggage, and comes with a build-in wheeled board so that older children can also ride along.

## Personalize your Stollo

The Stollo in a specific color or with a print on the hood? Everything is possible! Do you want to go even further and watch your personal ads roll by? There is also the option to add advertising panels to the side of the stroller.

## Made for generations

Stollo users care about each other, future generations, and our planet. The Stollo is designed to be sustainable and circular, with low production costs and a long service life. It is made of sturdy, 100% recyclable materials and is easy to repair thanks to the interchangeable parts. In short, the Stollo can be reused endlessly.
